

“Planetary Genocide”: Fukushima One Year Later : The Poisoning of Planet Earth

By [Dr. Ilya Sandra Perlingieri](#)

Global Research, March 08, 2012

Region: [Asia](#)

Theme: [Environment](#)

“The most difficult thing of all is to see is what is right in front of your eyes.” Goethe.

As we approach the tragic one-year anniversary of Fukushima’s multiple nuclear reactors’ accident on March 11, that initially affected the entire Japanese population, we now know that this nightmare has engulfed all of us. Let us also not forget that this is the third nuclear attack on the Japanese (the first two were Hiroshima and Nagasaki). Given what has not been done to ensure public safety, we cannot think of it any other way. From the very first day, there were lies and a massive cover-up of the extent of the destruction and the inherent radioactive dangers –not just from Japanese officials and TEPCO corporate reports, but also from the US. The Mark 1 reactors, built by General Electric, have design flaws. There are many of these same-designed reactors in the US.

A year later, much of the corruption, deceit, and careless practices have been documented extensively here at Global Research –while mainstream news continues Orwellian doublespeak. Last month, in a rare but very belated mainstream account, CBS News reported that after the tsunami and nuclear accident: “The normal lines of [government] authority completely collapsed in Japan.” See:

www.cbsnews.com/8301-18563_162-57386266/report-govt-collapsed-during-japan-nuke-crisis

Early on, even essential radioactive monitoring was shut down. In May 2011, the prestigious Norsk Institute’s online site was blocked from the US. They had been monitoring on a daily basis the worldwide radioactive contamination to which we were all –and continue to be–exposed. Conveniently, any early radiation monitoring in the US was inconsistent, with numerous sites supposedly not working for one or another reason. Then the so-called “acceptable” radiation levels in food were raised in the US and EU:

www.activistpost.com/2011/04/eu-follows-epa-raises-acceptable.html

As Dr. Helen Caldicott and Dr. Chris Busby have repeatedly reported: “There is no safe level of radionuclide exposure, whether from food, water, or other sources. Period.” See:

www.globalresearch.ca/PrintArticle.php?articleId=23902

and

www.helencaldicott.com/2011/05/unsafe-at-any-dose/#more-285

So, what is not monitored, or where the radiation rates are manipulated, then no one –government officials and corporations– can ever be held accountable, nor can increased death rates, diabetes, stillbirths, birth defects ever be attributed to this catastrophic planetary event.

When have we ever been told the truth about our life-long systemic radiation poisoning? For decades, we have been uninformed experimental laboratory rats since before the Manhattan Project. There never were any ethical or precautionary considerations. Greed and secret agendas trumped everything else.

With various half-lives –some eons-long– of numerous radioactive components, the human race and every other living creature on our planet is on its way to extinction, due to the known sterilization effects of radiation. Here is a short list of the half-life of five of the radioactive isotopes that are and will continue to poison all of our children, and us, ad infinitum, in the air we breathe, the food we eat, and the water we drink and in which we bathe:

- Cesium 137: 30 years
- Plutonium 239: 24,000 years
- Strontium 90: 29 years [mimics calcium in the body]
- Uranium 235: 700-million years
- Iodine 131: 8 days [absorbed into the thyroid and gives heavy radiation dose. Also goes into the soil, passed onto us through cow's milk.]

In a report released just a few week's ago, the milk tested in the San Francisco area still had radioactive levels of Cesium 134 and Cesium 137. According to even a compromised EPA, these are now at "150 percent of their maximum contaminant level." Here's the chart:

<http://enenews.com/highest-level-radioactive-caesium-san-francisco-area-milk-august-2011-150-epas-maximum-contaminant-limit-chart>

In addition, Fukushima's Unit 3 reactor also used MOX [mixed oxide], a plutonium-uranium fuel mixture that is deadly. A single milligram of MOX is 2-million times more deadly than enriched uranium.

Current radiation levels reported on Feb. 25 in Tokyo, 100 miles from Fukushima and an international hub, are "25 times the Fukushima mandatory evacuation zone." The eminent physicist Dr. Paolo Scampa has reported in detail his latest calculations on deadly radiation exposure here (see page 2):

www.veteranstoday.com/2012/02/25/evacuate-tokyo-and-all-us-forces-from-japan

For 30-million Japanese this is an epic tragedy.

Any reasonable safety precautions or realistic evacuations never took place at Fukushima or

elsewhere. In addition, a collection of 40-years worth of 600,000 spent fuel rods posed an immediate HazMat threat that never went away. The water poured over them evaporated into radioactive steam to go directly into our planet's atmosphere and the tons of sea water sprayed on the entire nuclear conflagration were criminally dumped into the Pacific Ocean. Again, because it was not monitored, we will never know how many millions of tons of radioactive water were dumped into the Pacific Ocean. The entire web of ocean life then was irreversibly contaminated with radioactive nuclear waste and detritus, as the ocean currents carried this nightmare to the west coast shores of North America (California, Oregon, Washington, and Vancouver). As with other major planetary bodies of water, the Pacific Ocean has become an enormous radioactive garbage dump of incalculable proportions that are beyond any remediation currently known to science. This majestic body of water has become one of our planet's toilets.(1)

What about the entire web of ocean life? From the great and magnificent whales to the variety of microscopic life, this entire vast ecosystem has been poisoned. Yet, we will never know the immense extent of death and destruction that Fukushima caused to it. Even knowing that the ocean food chain is contaminated with radioactivity, this was not reported by mainstream media. So, the fishing industry is catching and selling various fish and crustaceans that are radioactive. How many tons of these have gone up through the entire food chain, and then sold to uninformed consumers who eat these HazMat foods? Profits always trump our safety and well-being. This is the massive global poisoning of our only home -Mother Earth. We are fortunate, however, that the alternative internet media has reported on these dangers.

While hundreds of thousands (perhaps millions?) will develop various radiation-related illnesses (cancers and diabetes, as well as radiation-induced miscarriages, stillbirths and birth deformities) over the next decades, the coffers of the medical profession, pharmaceutical companies, and nuclear industry will be bursting with profits. The 1986 nuclear accident at Chernobyl continues its deadly impact -and that was only one reactor.(2) Fukushima had six reactors.

Medical reports are already showing a significant rise in deaths due to Fukushima's radioactive fallout. Noted toxicologist and internist Dr. Janet Sherman recently said:" Based on our continuing research, the actual death count here [in the US] may be as high as 18,000...but we continue to find that infants are hardest hit because their tissues are rapidly multiplying, they have undeveloped immune systems, and the doses of radioisotopes are proportionally greater than for adults." See:

www.radiation.org/press/pressrelease111219FukushimaReactorFallout.html

This massive and frightening crisis is the result of no precaution, no prevention, and no care or concern for human or any other kind of life on our planet. None of this is mainstream news. E.O. Wilson ("The Future of Life" and "Biodiversity") and Bill McKibben ("The End of Nature") were writing about these issues decades ago. The dangers of the nuclear age continue to mount with off-the-scale disastrous results to all of us.

How much longer can we be deceived about the extreme dangers of nuclear energy and nuclear weapons? Everything that encompasses nuclear energy is unsafe. It is hazardous in the extreme. Further, nuclear waste has been accumulating for six decades. There is NO

LONG-TERM SAFE WAY TO STORE ANY NUCLEAR WASTE. For example, countless drums of nuclear waste have been dumped into the ocean, and have been found to be leaking radioactive poisons.

Everything on our planet has been contaminated with life-long and long-term radiation. I continue to write: "Invisible does not mean safe." With many nuclear facilities in the US old and having numerous problems, the core issue of it as a hazardous endeavor remains. Two nuclear plants with serious troubles are Vermont Yankee, and just last month San Onofre (built right on a fault line). They are just the tips of the proverbial radioactive iceberg.

So, as long as profits trump safety, and as long as the entire nuclear industry has ties to the military, we will never be safe. Valid citizens' and medical concerns continue to be ignored. We are all expendable.

This is not a one-issue health and/or environmental crisis. We MUST think of the bigger picture, across many disciplines. We are in the midst of a long-planned and multi-pronged assault on our health and our planet's. The destruction of real and long-term good health has been replaced by multiple and chronic diseases (often caused by enormous toxic pollution that envelops all of us). Our entire biology has been battered for a century. The blood-brain barrier has been breached. Nano-technology and invisible stealth-created micro-organisms –both unregulated– are our modern-day plagues. Many were created in some bio-hazard lab. To add to this is the poisoning of our water, air and food supply. In 1998, the print-edition of London's "The Ecologist" (perhaps the earliest environmental magazine, first published in the 1970s), devoted their entire issue to "The Monsanto Files. Can we survive genetic engineering?"(3) For many years, F. William Engdahl ("Seed of Destruction") and Dr. Mae Wan-Ho both have written about the abundant and well-documented dangers of genetic engineering and the GM poisoned foods.

Add to that:, we have an illegal but on-going geo-engineered aerosol 24/7/365 stealth assault overhead that has completely changed our air and poisoned our health. In numerous lectures and research papers, Clifford Carnicom has documented that our air has been transformed to a plasma state; and with it is the associated tragedy of Morgellons syndrome that was created from some synthetic self-replicating nano-organism. There is no "off switch" for this; but the media ridicules sufferers. Time magazine recently published an article noting that these very real and documented symptoms were "delusional." Into this synergistic nightmare are also 100,000 chemicals –90 percent of which are untested– that surround our every move.

Last, but by no means the least, of these hazards is the hidden dangers of the EMF/RF spectrum [Electromagnetic Frequency/Radiation Frequency]. The proliferation of this deadly technology encompasses: cell phones and Wi-Fi and their towers that poison our landscapes. With more than 5-billion cell phones sold, consumers were never told how dangerous they were. Outdated data and reports do not include the now constant barrage of these higher frequencies that wreck our health. There is also newly reported research demonstrating that this also includes impairment of cognitive function and brain damage.(4)

The latest release of this hazardous technology is the so-called "Smart" Meters that are being installed all over North America and Europe without any mandate and without any preliminary research that the utility [electric, gas, and water] companies did on the numerous biological threats they are already causing people who have had a meter installed.(5)

With 8,000 complaints, California leads the US in the most vocal concerns about these meters. Several cities, including Santa Cruz, CA, have banned them with year-long moratoria. There was never any mandate to force these meters on anyone; the utility companies did not warn customers of the extreme risks of constantly pulsing EMF, nor did they warn customers about breakage to our DNA or brain damage. The American Academy of Environmental Medicine (founded in 1965) has called for a moratorium on these dangerous meters.(6) It is conceivable that the unfolding EMF crisis will be far worse than the asbestos and tobacco hazards combined. Scientist Prof. Olle Johansson of Sweden's prestigious Karolinska Institute, has been warning about these invisible biological dangers for decades. See:

and

2. www.youtube.com/watch?v=IJZumEgSblQ

Corporations have personhood and have the same legal standing as any real humans. They have the financial means to block any real justice for the environmental and health damage their products continue to cause. They are rarely held accountable. Add to that the destruction of 30-years of environmental laws meant to protect us, this is another part of the disaster recipe in which we live out our days. The nuclear industry has never told us the truth about the permanent level of radiation dangers to which we are all exposed. The plunder of our planet and the destruction of vast ecosystems have been documented for decades. These poisons, mostly invisible, envelop our every move, contaminate our DNA, and wreck our health and ability to reproduce safely. The past 10 years this destruction has been accelerated at a phenomenal rate, while mainstream media continues to report lies.

Nevertheless, more and more millions of people are waking up and connecting many of the dots of these epidemics of serious illnesses, loss of millions of jobs, theft of millions of homes, stealing of trillions of dollars of wealth to pay off banksters, CEOs and insiders, while the middle class around the globe is in extremis. Evidence continues to mount of what insider trading and printing of fiat money has done to destroy people's lives and economies around the globe. We cannot minimize or discount a situation that is totally out of control; and we cannot think of each of these HazMats as separate problems. They are all inter-related and they are destroying our health. Connecting the dots of this multi-pronged assault on all of us as well as our entire biosphere is ESSENTIAL. It is not sustainable. It is up to all of us to become well-informed and educated about what is happening, join together, and to paraphrase Dr. Rosalie Bertell "refuse to co-operate in our own destruction." We still have that choice.

Remember: What we don't look for, we can't find. If those in charge decide NOT to monitor or report the dangers, then no one is ever held accountable -that includes those in charge. We all suffer the consequences.
