As has been carefully documented, under cover of the 'virus'/'vaccine' narrative, the Global Elite is implementing long-planned and profound changes to 200 areas of human life.

In essence, as documented elsewhere - see ['We Are Being Smashed Politically, Economically, Medically and Technologically by the Elite's "Great Reset": Why? How Do We Fight Back Effectively?'](#) - this program will kill off a substantial proportion of humanity, imprison those left alive as transhuman slaves in their 'smart cities' subject to their fourth industrial revolution technologies (including 5G, digital ID, CBDCs, geofencing, AI policing & a robotized workforce), enclose the Commons forever and transfer all wealth to Elite hands.

Needless to say, with some people already resisting and more people likely to perceive the truth of what is happening and join the resistance with the passage of time, policing the imposition of this program will be a critical factor in ensuring its success.

As indicated then, just one area in which profound change will take place is policing.

Future policing will be done by a smaller number of militarily-equipped police, transhuman police and technocratic police supported by corporate private security technology.

In this article, I will briefly outline the key changes to policing, in these three distinct categories, and also explain why these changes must be resisted and how we can do this most effectively.

Fewer and Militarized Police

Reflecting a longer term trend, in 2019 the International Association of Chiefs of Police reported that 'Law enforcement agencies across the United States are struggling to recruit

and hire police officers.’ While police killings of innocent civilians – see [‘Mapping Police Violence’](#) and [‘Not just “a few bad apples”: U.S. police kill civilians at much higher rates than other countries’](#) – failed to rate a mention in the report, it did at least acknowledge ‘Scrutiny of the police, cellphone recordings of interactions between the police and public, media coverage, and popular entertainment portrayals of police have led many young people to view police differently than their parents may have.’ See [‘The State of Recruitment: A Crisis for Law Enforcement’](#).

In late 2021, two years into policing the pandemic, US police reported a substantially increased rate of retirement and resignation among police officers, with more than five times as many police leaving the New York Police Department in 2021 as left in 2020. According to the report: ‘In the wake of a spasmodic year of protests and pandemic, plus an aftermath of violent crime, the profession may be fast approaching a generational and possibly historic reckoning.’ See [‘Law enforcement faces unprecedented challenges in hiring and keeping recruits’](#).

On the other side of the world, where the Victoria Police had suffered an image-battering following their violent policing of protests against Covid-19 lockdown measures – see [‘Australia: Harsh Police Response During Covid-19’](#) – the situation was the same: ‘Victoria Police is facing a staffing crisis with an extra 1500 frontline officers needed, secret modelling has warned.’ See [‘Secret Report Reveals Victoria Police Facing a Staffing Crisis’](#).

Of course other police forces around the world suffered image batterings in response to their violent response to those protesting ‘pandemic’ lockdowns and other restrictions. See, for example, [‘Serbia: Violent police crackdown against COVID-19 lockdown protesters must stop’](#).

But on top of long-standing issues in relation to police numbers exacerbated by political direction of policing behaviour while enforcing ‘pandemic’ lockdown measures, it is clear that the number of serving police has been reduced throughout the past three years by using two additional mechanisms: In many places, forcing those who resisted the ‘kill shot’ to resign from service – see, for example, [‘Victoria Police facing exodus due to draconian Covid rules’](#) – and, everywhere, by killing off a proportion of the police who were mandated to take the shot (which will continue to have impact in the years ahead).

Apart from this, the damaged reputation police suffered as a result of their role in enforcing the Elite program against those people willing to nonviolently protest the violation of their constitutional and human rights, has meant that the conscience-based resignation rate of police has risen – see, for example, [‘Conscientious Resignation of Police Officer in Australia’](#) – while recruitment has suffered in many places.

Separately from this, other resignations and retirements have probably occurred following official interference to thwart conscientious police officers asked or attempting to investigate deaths from Covid-19 injections – see one initiative by New Zealand doctors to have the issue investigated ([‘Deaths Following C-19 Vaccination’](#)) which ran into government obstruction ([‘Jacinda Ardern Left Reeling As New Zealand Police Look at Investigating COVID Jab Deaths’](#)) and a Canadian officer punished for conducting an investigation ([‘Ottawa police officer charged for examining COVID-19 vaccine deaths’](#)). Of course, any attempts to expose injection deaths among police colleagues have no doubt been ‘discouraged’ despite evidence of their occurrence.

In any case, two critical questions to ask are these: Were government policies that led to police violence during the pandemic designed to provoke public anger and induce police retirements and resignations as ways of reducing police numbers easily? And was official interference in police decisions about whether or not to investigate injection deaths partly designed to disenchant conscientious officers and induce further resignation/retirements?

Why would governments do this? Could it be part of a plan to facilitate the transformation of how policing is conducted? After all, the World Economic Forum has been clear about the Elite intention to robotize the workforce, with more than half of human workers projected to be replaced by robots within a few years.

See [‘Machines Will Do More Tasks Than Humans by 2025 but Robot Revolution Will Still Create 58 Million Net New Jobs in Next Five Years’](#).

So why should we expect police to be forced out of the workforce, one way or another, at a lesser rate than elsewhere?

Moreover, there is an additional problem: Any human police officer with a reasonably ‘normal’ psychological profile has a conscience. And these will not serve well in enforcing the coming technocratic order.

Separately from the numbers issue, the ongoing militarization of police forces around the world has been noted by many scholars. For a summary of some issues in relation to policing in the USA, see this article written in 2017: [‘Why are Police in the USA so Terrified?’](#)

But it is clear that the trend to militarize policing has been accelerating for some years. In a recent article US constitutional attorney John Whitehead succinctly elaborates this trend as just one of the features to be expected from the US government in 2023:

‘Militarized police. Having transformed local law enforcement into extensions of the military, the Department of Homeland Security, the Justice Department and the FBI are moving into the next phase of the transformation, turning the nation’s police officers into techno-warriors, complete with iris scanners, body scanners, thermal imaging Doppler radar devices, facial recognition programs, license plate readers, cell phone extraction software, Stingray devices and so much more.’ See [‘What to Expect from the Government in 2023? More of the Same’](#) and [‘Stingray Tracking Devices: Who’s Got Them?’](#)

So police numbers are being reduced and police are being militarized. But that is not all.

Transhuman Police

A critical component of the Elite program is to turn those not killed into transhuman slaves.

What is transhumanism?

In essence: **Transhumanism is a set of beliefs based on the premise that human beings can be improved by genetic manipulation and/or implanting technologies into the brain and body to achieve enhanced capacities.**

See [‘Beware the Transhumanists: How “Being Human” is being Re-engineered by the Elite’s Covid-19 Coup’](#).

While many people involved in this field are concerned with treating disabilities to improve the life experience of those afflicted, and some are engaged in ongoing discussions to consider the ethical issues this raises, it is clear that this is the sanitized version of a program that has far more hideous implications. For a sanitized version, watch this video of a World Economic Forum discussion held on 24 January 2020: [‘When Humans Become Cyborgs’](#).

But, for the Elite, there is little point deploying these technologies unless they can be controlled by Elite agents. After all, as the World Economic Forum made clear in 2016, by 2030 **‘You’ll Own Nothing. And You’ll Be Happy.’**

See [‘8 predictions for the world in 2030’](#).

Obviously, if you are to own nothing and be happy about it, either you have reached some exalted state of human consciousness in which possessions no longer matter or someone is messing with your mind so that you believe what is not true.

And the best way to mess with someone’s mind is to implant a microchip into their body that enables control of that mind by someone else.

After all, altering what people think, feel, believe and do – through genetic manipulation and implanting technologies – is the very essence of transhumanism. So, to reiterate, transhumanists don’t want individuals with free will, they want individuals whose thoughts, feelings and behaviour can be controlled; that is, they want slaves. While this is explained at some length in the article ‘Beware the Transhumanists’ above, it is also made emphatically clear by World Economic Forum spokesperson, Professor Yuval Noah Harari, in a 3-minute video which includes these words:

COVID is critical because this is what convinces people to accept, to legitimize, total biometric surveillance.

We now see mass surveillance systems established, even in democratic countries which previously rejected them, and we also see a change in the nature of surveillance. Previously, surveillance was mainly above the skin, now it’s going under the skin....

... free will: That’s over. Watch [‘Mr. Harari has just revealed the Reason for the Plandemic’](#).

You can also watch a video demonstration of Elon Musk’s neuralink chip illustrating how this will work. Watch [‘This Is How Elon Musk’s Neuralink Microchip Will Be Put In Your Brain’](#).

In summary then, the technology now available after decades of effort enables receiver nanochips to be sprayed, injected or otherwise implanted into human bodies. With the ongoing deployment of 5G (which includes extensive space and ground-based technologies: see [‘Deadly Rainbow: Will 5G Precipitate the Extinction of All Life on Earth?’](#)), just one outcome of these combined technologies is that it will be possible to direct the individual behaviour of each person so implanted with directions from an external source.

You can watch a description of how the Covid-19 shots have been used to inject nanotechnology into the bodies of people which, under the direction of other individuals via EMF signals, can be assembled to establish a permanent communication and control link between the transhuman and those responsible for controlling it. Watch Maria Zeee’s interview of Dr. David Nixon who shows real time video footage of the nanotechnology inside the Covid-19 injections assembling robotic arms that guide the nanotechnology development:

[‘World First: Robotic Arms Assembling Via Nanotech Inside COVID-19 “Vaccines” - Filmed in Real Time’](#).

There is another excellent video interview by Dr. Faiez Kirsten of Dr. Ana Mihalcea discussing the transhumanist agenda. This includes consideration of how geoengineering – by spraying metal particulates (such as aluminium, barium and strontium) and synthetic biology into the atmosphere – is being used to modify all life on this planet (‘to modify every cell, every microbe, to digitize it and then to fuse it in its natural state with synthetic biology’), the role of electromagnetic frequencies (EMF) such as 5G in this scheme, and the purpose of nanotechnology ingredients in the injections. **In essence, they conclude, besides killing vast numbers of people, they want to control the minds of those left alive.** In summarizing, Mihalcea emphasised that her research demonstrates that the unvaccinated are not safe and they must take further action to defend their health from the synthetic biology attacks through atmospheric geoengineering and contaminated food.

‘We are running out of time as the human species and our planet is being destroyed via synthetic biology. If you want to survive and you want your children and grandchildren to have a chance of survival you must rise now and you must fight.’ Watch [‘A Discussion with Dr Ana Mihalcea on Transhumanism and EDTA Chelation’](#).

Moreover, given that the control technology of its transhuman slaves will be owned by corporate executives, this means that the Elite will be able to control everything from the launch of nuclear weapons (by using remote control to direct the chosen individual in a particular chain of command to order [or execute] the launch of one or more nuclear weapons at the target[s] nominated at the time[s] specified), deploy ‘cyborg soldiers’, ‘cyborg workers’ and ‘cyborg consumers’ to do as directed and, of course, ‘cyborg police’ to carry out the orders issued by those controlling the command technology.

In the case of transhuman police, this could range from duties resembling those now performed by police to any other task whatsoever to which they are assigned. And because the implanted chip will override free will, the transhuman individual will have no awareness of choice and will simply robotically perform the tasks delivered by an artificial intelligence program to the technological implants in its body and brain.

So whether programmed to issue a fine, kill a noncompliant individual, forcibly relocate one or more people from a rural area to the nearest ‘smart city’ or simply go home, the cyborg

police officer will do as directed without thought or feeling of its own.

Technocratic Police and Corporate Private Security

In 2016, the World Bank published a report considering some of the consequences of robotization, including the problems that would be caused and how these might, theoretically, be addressed.

See [‘The rise of the machines: Economic and social consequences of robotization’](#) with a summary here: [‘The economic and social consequences of robotization’](#).

Despite one highly sanitized World Economic Forum account of robots leading to an increased workforce – see [‘Here’s why robots are actually going to increase human employment’](#) – another World Economic Forum report candidly noted that inequality would worsen as ‘robots will do half of all work tasks by 2025’. See

[‘The Future of Jobs Report 2020’](#) and

[‘WEF: Inequality likely to worsen as robots set to do half of work by 2025’](#).

And this is clearly evident in relation to police work where, beyond even the measures outlined above, a substantial range of new technologies will robotize policing, particularly in relation to primary functions: surveillance and control.

In essence, an increasing number of policing functions are being technologized to make policing more ruthlessly efficient. This involves use of a range of technologies such as 5G, the Internet of Things (IoT), the Internet of Bodies (IoB), the [Internet of Places](#) (IoP), artificial intelligence (AI), geofencing, digital identity, surveillance and facial recognition (3D) cameras, smart street poles and lights (which gather data via facial recognition cameras and environmental sensors, display digital signage and use speakers to instruct the immediate population how to behave), license plate readers and vehicle kill switches as well as autonomous and electromagnetic weapons.

But how these technologies are combined and deployed varies. To illustrate this, consider the Israeli private security company [Gabriel Protects](#) which offers a suite of surveillance and control services: ‘Preempt and contain physical threats in real time with smart technology. Billions are spent monitoring and recording security incidents. Gabriel detects and responds to them. Gabriel’s next generation security technology instantly detects and automates the response to violent threats, saving precious time and lives.’

As Whitney Webb explains: ‘much of the company’s future vision coincides with the vision of the intelligence agencies backing it – pre-crime, robotic policing and biometric surveillance.’ Hence, under the guise of stopping mass shootings ‘a surveillance system backed by top Mossad, CIA and FBI officials is being installed in schools, houses of worship, and other civilian locations’ throughout the USA. The Gabriel system includes the company’s ‘threat detection’ technology, which involves the use of ‘smart cameras’ that use AI as well as facial recognition and related technologies to detect weapons, ‘fights’ and ‘abnormal behavior’ in a particular area. The cameras throughout a facility, along with ‘smart shield’ panic buttons which can be activated both manually and remotely, are meant to act as ‘activation triggers’, with the triggering largely automated and managed by AI. When a trigger is set off, the Gabriel system enters the appropriate ‘alert mode’, which includes emergency, panic, silent panic and yellow (for minor incidents). Once activated, the panic button offers

two-way communication, a live video feed and gunshot detection by acoustic means.

See [‘CIA and Mossad-linked Surveillance System Quietly Being Installed Throughout the US’](#) and [‘Anonymous Philanthropist Gifts Israeli Life-Saving Tech to 500 US Synagogues and Schools’](#).

As one would expect, given the company is providing technologies that enable implementation of the Elite program to lock us all into their ‘smart cities’, Gabriel intends to expand far beyond schools and houses of worship to retail stores, warehouses, data centers and banks and is already heavily reliant on AI and machine learning while using drones and robots as security tools. Beyond this, it intends to develop predictive policing (‘pre-crime’) capabilities. See [‘Incident Response Solutions’](#) and [‘Disrupting Legacy Security’](#).

Of course, ‘pre-crime’ protocols are designed to ‘eliminate public dissent’. See [‘CIA and Mossad-linked Surveillance System Quietly Being Installed Throughout the US’](#).

Gabriel is not the only corporation researching and providing technologies in these fields. Another prominent corporation is [Palantir Technologies](#). There are others.

Needless to say, these corporations have close ties to the academy, the military and the intelligence community as well, all of which are also playing key roles in imposing the Elite program.

Obviously, these surveillance and control technologies are being widely deployed around the world with countries like China, Israel (including in Palestine) and the United States leading the way.

But to highlight precisely where this is headed, technocratic policing will include drones (used as aerial police) and robots equipped with electromagnetic weapons, such as those that tech guru Aman Jabbi calls ‘puke guns’ (to make the target individual vomit).

See [‘Digitizing Your Identity is the Fast-Track to Slavery: How Can You Defend Your Freedom?’](#)

And if you would like a taste of where this might go, see [‘Psychotronic and Electromagnetic Weapons: Remote Control of the Human Nervous System’](#).

Beyond this, police robots are being used to deploy chemical weapons – see [‘Special delivery: Using police robots to deploy chemical agents’](#) – and fire tasers.

See [‘TASER-armed robots keep police out of harm’s way’](#).

But ‘explosive ordnance disposal robots’ have been used offensively since 1993 when a one-metre tall, 218-kilogram remote-controlled robot was sent into an apartment, used a television camera to locate a suspect hidden in a cupboard and then, under the remote-control direction of a technician, used a high-pressure water gun to knock the shotgun out of the suspected gunman’s hands, enabling the county police department’s version of a SWAT team to arrest him.

More dramatically, a police ‘killer robot’ has already been used to kill a suspected gunman. In 2016, police in Dallas in the USA crudely attached a bomb to a robot originally designed to investigate and safely discharge explosives and then deployed it near a suspect where it

was detonated remotely.

See [‘How the Dallas Police Used an Improvised Killer Robot to Take Down the Gunman’](#).

Other police forces are considering using robots to kill suspects.

See, for example, [‘Oakland Cops Hope to Arm Robots with Lethal Shotguns’](#).

But the San Francisco Police Department has already developed a protocol for its use of robots to kill people: ‘Robots will only be used as a deadly force option when risk of loss of life to members of the public or officers are imminent and outweigh any other force option available to SFPD.’

See [‘Law Enforcement Equipment Policy: Inventory Acquired Prior to January 2022’](#) and [‘SFPD authorized to kill suspects using robots in draft policy’](#).

The fundamental point is that human police officers are being replaced by a series of technologies guided by artificial intelligence and ending with the use of autonomous weapons systems (AWS).

And these technologies are already being widely deployed and used as part of the ongoing Elite program to build a technocratic state that will subvert human identity, privacy, dignity, volition and freedom.

How Can We Resist this Technocratic Policing Model Effectively?

A long-planned, vast range and parallel sequence of measures is being rapidly implemented to capture political, social, economic, medical and technological control of the human population. The intention is to kill off a substantial proportion of humanity and imprison those left alive as transhuman slaves in the Elite’s technocratic (surveillance and control) ‘smart’ cities, which will be policed by a range of current and emerging technologies.

And, as I have explained previously – see [‘We Are Being Smashed Politically, Economically, Medically and Technologically by the Elite’s ‘Great Reset’: Why? How Do We Fight Back Effectively?’](#) – because the Global Elite controls conventional political, economic, financial, technological, medical, educational, media and other important levers of society, **the Elite has control of how events unfold while simultaneously giving it control of the narrative about what is taking place. As a result, the truth about the Elite plan is easily concealed.** Consequently, effective resistance to this complex and sophisticated program requires a response based on a full understanding of the Elite’s deeper agenda and that is equally sophisticated.

This means that we cannot rely on any conventional channel, political, legal or otherwise.

Hence, the most effective defence against any aspect, including the technocratic policing model, of the full program that Elite agents in the World Economic Forum and elsewhere are imposing on us is to take action now that prevents foundational components of their program from being put into place.

Obviously, this requires us to clearly identify the foundations on which the Elite program is being built and to then mobilize as many people as possible, in as many countries as possible, to nonviolently noncooperate with the building of these foundations or, to the

extent they exist already, to disrupt them so that they cannot function effectively.

And the time to do this is now.

If we do this effectively, the technologies – including 5G, Artificial Intelligence (AI), digital ID, Central Bank Digital Currencies (CBDCs), geofencing, a plethora of ‘Smart’ devices, and the surveillance and facial recognition cameras – that will make the technocratic policing model possible will be stopped before they are fully deployed.

So if you are interested in being strategic in your resistance to the ‘Great Reset’ and its related agendas, you are welcome to participate in the [‘We Are Human, We Are Free’](#) campaign which identifies a list of 30 strategic goals for doing so.

One of these strategic goals reads as follows:

‘To cause the police and security personnel to resist the introduction and use of those surveillance and control technologies – including (among many others) 5G, 6G, the Internet of Things (IoT), artificial intelligence (AI), geofencing, smart street poles and lights (which gather data via facial recognition cameras and environmental sensors, display digital signage and use speakers to instruct the immediate population how to behave), digital identity, surveillance and facial recognition cameras, license plate readers, vehicle kill switches, drones (used as aerial police), robots (including as a ‘deadly force option’), autonomous and electromagnetic weapons – that are being used to transform policing to collect your data and control your behaviour as part of the ongoing Elite program to build a technocratic prison that will subvert human identity, human dignity, human volition, human privacy and/or human freedom.’

So one vital role that you can play is to talk to individual police officers that you know personally, inform them of the role they are slated to play in the coming technocratic order, and invite them to consider the implications of this for them and their loved ones, and then listen to them as they talk about it.

And you can visit your local police station or write them a letter to raise awareness of what is happening and ask them to consider whether this is a future they wish for themselves or their family.

In addition, you can download the ‘We Are Human, We Are Free’ one-page flyer that identifies a short series of crucial nonviolent actions that anyone can take. This flyer, now available in 23 languages (Chinese, Croatian, Czech, Danish, Dutch, English, Finnish, French, German, Greek, Hebrew, Hungarian, Italian, Japanese, Malay, Polish, Portuguese, Romanian, Russian, Serbian, Spanish, Slovak and Turkish) with several more languages in the pipeline, can be downloaded from here: [‘One-page Flyer’](#).

WE ARE HUMAN

WE ARE FREE

WORLDWIDE NONVIOLENT RESISTANCE TO ELITE CONTROL _ *THE GREAT RESET*

We Are Human, We Are Free is a worldwide nonviolent resistance movement to free ourselves from elite control and resist the forces of fear and dehumanisation. Our aim is to build a mass civil resistance movement to undermine the power of the criminal Global Elite to control us,

and to regain the freedoms that make our lives worth living. Because we are human, we are free to make choices. The time has come to choose - are we on the side of love, life and freedom or fear, self-imprisonment and tyranny?

WHAT CAN YOU DO?

Refuse 'pandemic' injections, tests and passports. Big Pharma is not honest or safe. Choose natural health.

Keep your small business open in lockdown. Buy from small businesses. Don't use contact-tracing QR codes.

Don't wear masks or social distance. Staying human is more important than living in fear.

Boycott corporate & government media that misinform & censor. Choose uncensored media & social media.

Don't buy 5G or smart devices/systems. Resist the fourth industrial revolution. Defend our humanity.

Refuse digital identity. Don't submit biometric data: DNA, finger/palm-prints, iris scans or voice recordings. Don't get microchipped.

Pay with cash & switch to community owned banks. Grow your own food. Join local trading schemes.

Don't pay 'pandemic' related fines. Risk becoming a prisoner of conscience. Seek support.

<https://wearehumanwearefree.org>

Moreover, if this **strategic resistance** to the 'Great Reset' (and related agendas) appeals to you, consider joining the ['We Are Human, We Are Free'](#) Telegram group (with a link accessible from the website).

And if you want to organize a mass mobilization, such as a rally, at least make sure that one

or more of any team of organizers and/or speakers is responsible for inviting people to participate in this campaign and that some people at the event are designated to hand out the one-page flyer about the campaign.

Ideally, prior to any such event, a liaison team should visit the police responsible for policing the event to discuss it but also raise awareness of how police are being used by the Elite in this context. See [‘Nonviolent Activism and the Police’](#) and [‘How To Do Police Liaison’](#).

At this point too, it is worth keeping in mind that in virtually all contexts, including when dealing with police, it is invaluable to listen, deeply. This should help you understand the other person better and might help open a door to greater awareness on their part in the future. In any case, it is a great gift, whatever its immediate outcome. See [‘Nisteling: The Art of Deep Listening’](#).

If you like, you can also watch, share and/or organize to show, a short video about the campaign here: [‘We Are Human, We Are Free’ video](#).

In parallel with our resistance, we must create the political, economic and social structures that serve our needs, not those of the Elite. That is why long-standing efforts to encourage and support people to grow their own biodynamic/organic food – see [‘23 Reasons You Should Start a Garden in 2023’](#) – participate in local trading schemes (involving the exchange of knowledge, skills, services and products with or without a local medium of exchange), such as [Local Exchange Trading Systems](#) and [Community Exchange Systems](#), as well as develop structures for cooperation, governance, nonviolent defence and networking with other communities are so important.

Conclusion

To summarize very simply: human police officers are being militarily-equipped in the short term, to be rapidly replaced by transhuman police as well as ‘technocratic police’: artificial intelligence (AI) that will direct policing and involve transhuman police, drones, robots and autonomous & electromagnetic weapons systems (AWS). This is one small but vital part of the comprehensive Elite program to kill most of us, enslave those left alive, enclose the Commons forever and capture all wealth.

Hence, one valuable function we can perform is to inform police of this and invite them to resist it.

Of course, it is not a message that will resonate with every police officer or every member of the community, for that matter. As you already know.

Many human beings, including police officers, are badly emotionally-damaged people. See [‘Why Violence?’](#) and [‘Fearless Psychology and Fearful Psychology: Principles and Practice’](#).

But it is crucial that we keep telling the truth and giving people chances to perceive the deeper Elite program and what it portends for humanity. Because it is not a future any human being, including police officer, should want to embrace if they value human identity, privacy, dignity, volition and freedom for themselves or their children.

Hence, our persistence in presenting the information, while listening well when appropriate, is crucial to mobilizing the resistance we need to succeed.
