

Reasons Why the 2020 Presidential Election Is Deeply Puzzling

If only cranks find the tabulations strange, put me down as a crank

To say out-loud that you find the [results](#) of the 2020 presidential election odd is to invite derision. You must be a crank or a conspiracy theorist. Mark me down as a crank, then. I am a pollster and I find this election to be deeply puzzling. I also think that the Trump campaign is still well within its rights to contest the tabulations. Something very strange happened in America's democracy in the early hours of Wednesday November 4 and the days that followed. It's reasonable for a lot of Americans to want to find out exactly what.

First, consider some facts. President Trump received more votes than any previous incumbent seeking reelection. He got 11 million more votes than in 2016, the third largest rise in support ever for an incumbent. By way of comparison, President Obama was comfortably reelected in 2012 with 3.5 million fewer votes than he received in 2008.

Trump's vote increased so much because, according to exit polls, he performed far better with many key demographic groups. Ninety-five percent of Republicans voted for him. He did extraordinarily well with rural male working-class whites.

He earned the highest share of all minority votes for a Republican since 1960. Trump grew his support among black voters by 50 percent over 2016. Nationally, Joe Biden's black support fell well below 90 percent, the level below which Democratic presidential candidates usually lose.

Trump increased his share of the national Hispanic vote to 35 percent. With 60 percent or less of the national Hispanic vote, it is arithmetically impossible for a Democratic presidential candidate to win Florida, Arizona, Nevada, and New Mexico. Bellwether states swung further in Trump's direction than in 2016. Florida, Ohio and Iowa each defied America's media polls with huge wins for Trump. Since 1852, only Richard Nixon has lost the electoral college after winning this trio, and that 1960 defeat to John F. Kennedy is still the subject of great suspicion.

Midwestern states Michigan, Pennsylvania, and Wisconsin always swing in the same direction as Ohio and Iowa, their regional peers. Ohio likewise swings with Florida. Current tallies show that, outside of a few cities, the Rust Belt swung in Trump's direction. Yet, Biden leads in Michigan, Pennsylvania, and Wisconsin because of an apparent avalanche of black votes in Detroit, Philadelphia, and Milwaukee. Biden's 'winning' margin was derived almost entirely from such voters in these cities, as coincidentally his black vote spiked only in exactly the locations necessary to secure victory. He did not receive comparable levels of

support among comparable demographic groups in comparable states, which is highly unusual for the presidential victor.
