All through this year Israel has been praised and admired for the efficiency of its vaccination drive. Today it is one of the most vaccinated countries in the world with over 80 percent of its adult population having been double-jabbed.

With such a high vaccination rate one would expect that Covid would have been tamed in that country. After all, we were told that vaccines were the way to end the pandemic and with the initial reports of Pfizer being up to 98 percent effective, Israel should have been in an excellent position today.

The reality on the ground, however, is a complete opposite of what one would expect.

Israel, one of the world’s most vaccinated nations, is having its worst numbers since the beginning of the pandemic.

Here is a quote from a recent [report](#) by CNBC News titled “Israel doubles down on booster shots as daily Covid cases set new record.”

“Covid-19 cases in Israel have been rising sharply since July despite the high vaccination rate. New daily cases in the country reached an all-time high of 12,113 on August 24, surpassing the January peak of 11,934.”

This situation is [confirmed](#) by a piece on NPR:

“Israel was the first country on Earth to fully vaccinate a majority of its citizens against COVID-19. Now it has one of the world’s highest daily infection rates — an average of nearly 7,500 confirmed cases a day, double what it was two weeks ago. Nearly one in every 150 people in Israel today has the virus.”

And here is an [account](#) from an Israeli news outlet:

“The country has one of the world’s highest COVID-19 vaccination levels, with about 78

percent of those ages 12 and older fully vaccinated, mostly with the Pfizer vaccine. At the same time, Israel now has one of the highest infection rates in the world..." [emphasis added]

Let us spell out what is transpiring in Israel these days: fully vaccinated people are getting infected with Covid-19 and are in turn infecting other fully vaccinated people with this disease.

Please ponder this carefully and then ask yourself this question: what can we conclude from the fact that one of the world's most vaccinated countries has one of the world's highest Covid infection rates?

Here is the inescapable conclusion: the vaccines that have been injected into the people of Israel have failed to protect them against Covid-19.

To put it another way, the Pfizer vaccine that has been widely used in that country has been shown to be ineffective.

The government of Israel recognized as much when it began administering [boosters](#) on July 30. The boosters are nothing less than the admission by the Israeli health authorities that the original vaccines do not fulfil their protective function.

They have, in fact, [admitted](#) as much when confronted with real-world data:

"Announcing the decision on Sunday, top Israeli health officials said the effectiveness of the second dose of the Pfizer-BioNTech vaccine waned six months after administration, making a booster necessary."

According to Dr Kobi Haviv, Director of Herzog Hospital in Jerusalem, fully vaccinated people account for [85-90 percent of hospitalizations](#) at his institution. Given that less than that percentage of the Israeli population is fully vaccinated, it would seem that vaccination not only does not prevent you from contracting the disease, but may actually increase one's chances of becoming a serious Covid case.

The figures from Israel also show that vaccinated people are [27 times more likely](#) to contract symptomatic Covid than those who have acquired natural antibodies through infection.

Rather than being a success, the much-touted Israeli's vaccination drive has been an abysmal failure.

This is the inescapable conclusion of the hard data before us.

Most people, however, are unable to see this obvious truth, because they have been brainwashed into believing that the vaccines are the way out of the pandemic. The vaccines propagandists have been able to induce cognitive dissonance in their victims.

It is sad and disturbing to see these very victims lining up lamb-like for their "boosters" which are manufactured by the same companies and people responsible for this debacle.

After eighteen months of relentless fearmongering and propaganda their cognitive ability

has been impaired to the point that they cannot make logical sense of the information before their eyes.

What's worse, these vaccines are not merely ineffective. Reports of severe side effects and injuries have been pouring in from all over the world. According to a [report](#) issued by the Israeli People's Committee (IPC), a citizen-led group of Israeli health experts, the Pfizer/BioNTech vaccine has the potential to damage virtually every system in the human body. Based on data drawn from the *Central Bureau of Statistics* and the Israeli Ministry of Health, the group estimates that the mortality rate among the vaccinated is about 1:5000. This would mean that more than a thousand Israeli citizens died needlessly because of the vaccines.

Let us recap what we know beyond any doubt: one of the most vaccinated countries is currently posting one of the highest rates of infection in the world.

What deduction can we make based on these two widely reported and undeniable facts?

It is truly regrettable that most people today fail to see the obvious truth that stares us right in the face.

Since we are all being forced to take the vaccine, we urge everyone to consider the reality before our eyes.

The evidence coming from Israel glaringly exposes the dire fact: the Pfizer vaccine does not work. It does not shield its recipients from Covid-19.

Pfizer, however, is not the only failing vaccine. Quite to the contrary, it appears to be one of the most "effective" available, which is one of the reasons why it was the first one to receive full approval from the Food and Drug Administration (FDA).

Please carefully ponder the full implications of this.
