Theme: [Biotechnology and GMO](#)

Russia has just announced a game-changing move in the fight against Monsanto's GMOs, completely banning the use of genetically modified ingredients in any and all food production.

In other words, Russia just blazed way past the issue of GMO labeling and shut down the use of any and all GMOs that would have otherwise entered the food supply through the creation of packaged foods (and the cultivation of GMO crops).

“As far as genetically-modified organisms are concerned, we have made decision not to use any GMO in food productions,” Deputy PM Arkady Dvorkovich revealed during an international conference on biotechnology.

This is a bold move by the Russian government, and it sits in unison with the newly-ignited global debate on GMOs and the presence of Monsanto in the food supply. It also follows the highly-[debated ruling](#) by the World Health Organization that Monsanto's glyphosate-based Roundup is a 'probable carcinogen.'

But I also want to put it into perspective for you. If this announcement were to be made in the United States, for example, it would mean a total transformation of the food manufacturing industry. But in Russia, the integration of GMOs is not close to the same level as in the U.S.

We know that, in the United States, 90 plus percent of staple crops like corn are genetically modified, along with 94 percent of soybeans and 94 percent of cotton. A ban on GMOs in food production would radically change the entire food supply. In Russia, however, the country is much more poised for a GMO food revolution. [1]

As RT [reports](#):

“According to official statistics the share of GMO in the Russian food industry has declined from 12 percent to just 0.01 percent over the past 10 years, and currently there are just 57 registered food products containing GMO in the country. The law ordering obligatory state registration of GMO products that might contact with the environment will come into force in mid-2017.”

President Vladimir Putin believes that he can [keep GMOs out of the country](#), even while staying in compliance with the World Trade Organization's (WTO) commandments. In a past meeting addressing the members of the Board of the Russian Federation Council he stated:

“We need to properly construct our work so that it is not contrary to our obligations under

the WTO. But even with this in mind, we nevertheless have legitimate methods and instruments to protect our own market, and above all citizens.”
