Dear Readers,

More than ever, Global Research needs your support. Our task as an independent media is to "Battle the Lie".

"Lying" in mainstream journalism has become the "new normal": mainstream journalists are pressured to comply. Some journalists refuse.

Lies, distortions and omissions are part of a multibillion dollar propaganda operation which sustains the "war narrative".

While "Truth" is a powerful instrument, "the Lie" is generously funded by the lobby groups and corporate charities. And that is why we need the support of our readers.

In March 2015, a working group of 17 experts from 11 countries met at the International Agency for Research on Cancer, known as IARC, to evaluate the carcinogenicity of five herbicides and insecticides, among these- the most heavily used herbicide in the world, glyphosate. The study concluded that this chemical is “probably carcinogenic to humans” (Group 2A), based on “limited” evidence of cancer in humans and “sufficient” evidence of cancer in experimental animals. IARC also reasoned that there was strong proof for genotoxicity, both for “pure” glyphosate and for glyphosate formulations.

That an economic world war has already started is beyond dispute.
