April 21, 2023 - Pearland, TX - Sherri and David Moody are both COVID-19 Vaccinated Teachers in Texas. Sherri was admitted to hospital with dehydration which turned into a life-threatening condition that included pneumonia, sepsis, and ultimately septic shock.

From their [GoFundme](#):

Sherri and David Moody

Eric Wells is organizing this fundraiser on behalf of David Moody.

Eric Wells →
Organizer
Pearland, TX

Hello, my name is Eric Wells and I would like the opportunity to introduce you to two of my dearest friends, Sherri and David Moody. They are both Deer Park graduates and high school sweethearts. They have a son named Jake who recently married Mika. The Moody's are new residents to Friendswood and both David and Sherri have dedicated their lives to public education. As the PAL'S teacher (Peer-Assisted Leadership) at Deer Park High School, Sherri taught her students about a servant attitude to help students connect and help each other through struggles and adversity. David's career is unique as it spans over 20 years and it includes experience at all levels, elementary, junior high, and high school. Most recently, David was the deputy superintendent in Pearland ISD. Unfortunately, events from Friday, April 21st have caused both David and Sherri to retire early. Sherri was admitted to the hospital on that Friday and what seemed to be something as simple as dehydration turned into a life-threatening condition that included pneumonia, sepsis, and ultimately septic shock. Sherri was now in a fight for her life with David by her side every step of the way. It was going to take a miracle and all David wanted was to be able to take Sherri home. Unfortunately, complications with septic shock caused Sherri to lose all 4 limbs. There were many challenges and setbacks throughout but today on August 7th after 108 days, Sherri is back home. The miracle happened and I share this in the hope of raising financial support for David and Sherri. The goal is to raise enough money to help defer the costs of medical bills, physical therapy, home renovations (wheelchair accessibility), and prosthetic limbs (4). Please consider supporting David and Sherri in this new and challenging journey. Thank you for taking the time to meet David and Sherri and for any consideration.

My Take on Sherri Moody:

A healthy Texas teacher (COVID-19 Vaccinated as mandated) goes to hospital for mild dehydration and ends up losing both her arms and legs, returning home only after 108 days and multiple surgeries.

How can anyone see this and not be alarmed? This is not normal.

And this is far from a unique incident, there are hundreds (if not thousands) of these.

A young healthy person doesn't get Sepsis - IMMUNOCOMPROMISED people do!

James Mackay before the sepsis infection

A once super-fit personal trainer is learning to walk again after both legs and all his fingers were amputated when he suffered life-threatening sepsis. Health-conscious James MacKay, 52, had completed 72-mile bike rides and daily three-hour yoga sessions before developing a cough which wouldn't go away.

Just two hours after dialling 111 he was rushed by ambulance to hospital and shortly lapsed into a coma. He was diagnosed with a Strep A bacterial infection which triggered sepsis - a condition where the body's immune system turns on itself.

Over the next few weeks James's weight dropped from 15 stone to just a frail seven stone as the infection 'chewed through his muscles.' Surgeons were then forced to amputate both legs from below the knee and all his fingers.

Mr Mackay, 52, said: "The hospital were throwing antibiotics at me and my family were told that I was going to die anyway so they had nothing to lose in treating me." The father of two to Ellie-Mae, 22, and Joseph, 13, was in a coma for over six weeks while doctors battled to save his life in Christmas, 2022.

Mr Mackay, from Cranfield in Bedfordshire, said: "It was challenging waking up because of the pain - my thinking was all over the place, I didn't know what was real." "I was 96kg (15 stone) when I was admitted into hospital and when I came out I had dropped to 50kg (seven stone) which was almost half of my body weight.

Feb. 18, 2024 - Hertfordshire, UK - 30 year old Gina Campanini died suddenly from sepsis on Sep. 14, 2023, the day after "Sepsis Awareness Day".

- On a monday September morning, Gina woke up with what she thought was flu
- She was suffering from a tight chest, muscle pain and high temperature
- by thursday her symptoms worsened, she saw a GP who said it was likely just a virus, was told to go home, drink plenty of fluids.
- by friday morning she struggled to breathe, went to hospital, was admitted to Intensive Care Unit, had a stroke and died one week later.

The problem comes as a case emerged of a 30-year-old primary school teacher who died late last year from sepsis after her infection was mistaken for a virus. Gina Campanini's family believe more could have been done to save her life.

Gina Campanini, left, pictured with her sister Maria, suffered a stroke and died due to sepsis

On a Monday morning in September, Gina, from Hertfordshire, woke up with what she thought was flu. She was suffering from a tight chest, muscle pain and a high temperature. By Thursday her symptoms had worsened and so she booked a GP appointment for later that day.

'She was told it was likely just a virus,' says her sister, Maria, 26, a charity worker from London. 'Gina wasn't given any medication – she was told to go home, drink plenty of fluids and monitor her symptoms.'

Her condition deteriorated during the night, and the next morning, when she began struggling to breathe, her parents drove her to hospital.

By that stage Gina had developed sepsis, and she was admitted to intensive care. Sepsis can be triggered by common viruses such as flu, Covid or, as in Gina's case, bacterial infection group A streptococcus, also known as strep A.

She was treated with antibiotics but suffered a stroke due to the sepsis and, just over a week after entering hospital, Gina died. Her family do not blame the GP for Gina's death, but question why her health and youth, coupled with severe symptoms, did not cause more concern.

'Gina was young, fit and healthy, so the fact that she got so unwell so quickly surely should have raised alarm bells,' says Maria. 'Perhaps if Gina was advised to go to A&E sooner, or she knew the symptoms of sepsis, she might still be with us.'

A doctor told Gina her fever was just a virus... a week later she was dead. Amid a worrying rise in sepsis deaths, one heartbroken sister pleads for wider awareness of the hidden killer

Britain's worrying rise in deaths from **sepsis** may be due to some doctors not taking the condition seriously, according to the UK's top sepsis expert.

The life-threatening condition occurs when the immune system overreacts to an infection and starts to damage the body's tissues and organs, and over the past decade deaths from it have soared – from 37,000 a year in 2013 to about 48,000 a year now.

Despite repeated awareness campaigns aimed at speeding up diagnosis and treatment, sepsis now causes more deaths than breast, prostate and bowel **cancer** combined.

While the rise has been partly blamed on an ageing population and hospitals recording more sepsis cases than before, according to Dr Ron Daniels, founder and chief executive of **charity UK Sepsis Trust**, the blame can also fall on a significant number of sceptical clinicians who believe the crisis is 'all hype and hysteria'.

The problem comes as a case emerged of a 30-year-old primary school teacher who died late last year from sepsis after her infection was mistaken for a virus. Gina Campanini's family believe more could have been done to save her life.

Maria Campanini lost her sister Gina to sepsis, aged just 30, on **14th September 2023** – the day after Sepsis Awareness Day. On behalf of her whole family, Maria is sharing Gina's story and delivers three key messages about this devastating condition.

Feb. 24, 2024 – Nanaimo, BC, Canada – 23 year old Sophia, a shelter worker, was misdiagnosed with various ailments during summer of 2023, was transported to hospital on Nov. 24, 2023 with sepsis and died 3 days later on Nov. 26.

Young B.C. woman's death blamed on health-care gaps

Sophia, 23, died of sepsis after likely contracting an infection from her workplace.

Cindy E. Harnett, video by Alanna Kelly
Feb 24, 2024 5:30 AM

Listen to this article
00:05:02

The death of a young shelter worker in Nanaimo is being blamed on an easily treated infection that she likely contracted from clients, but that went undiagnosed because of a lack of medical care in Nanaimo.

Sophia, 23 — her family did not want her last name revealed — was a graduate of Vancouver Island University's community mental health worker program and had been working at Nanaimo Unitarian Shelter.

Her daughter **started showing signs of illness in March 2023**. She took a leave of absence from her job as a mental health worker at Nanaimo's Unitarian Shelter in June.

Through her care, Sophia consulted doctors at a walk-in site for young people, and tried accessing the city's lone Urgent and Primary Care Centre, since she didn't have a family physician of her own.

"The first misdiagnosis was that she had some kind of eating disorder. And you know, she knew she was trying to eat. She didn't think that was the problem," says Paul Manly, the shelter's executive director and a Nanaimo city councillor advocating on behalf of the family.

Manly and Sophia's mom say she visited Nanaimo Regional General Hospital twice. The first time, in October, she was diagnosed with hemorrhoids. The second time she was airlifted to St. Paul's Hospital in Vancouver — and died two days later from sepsis on Nov. 26, 2023.

"By the time they figured out what was going on the infection had taken over her body."

But when she fell ill last summer, losing weight and hair, she struggled to get medical care, and was then misdiagnosed with everything from an eating disorder to hemorrhoids. When she was finally properly diagnosed, it was too late.

On Nov. 24, Sophia was transported to hospital in Vancouver with sepsis and died days later.

"I truly hope changes are made so no parent/family has to live what I've been through," mother Melonie said in a social media post thanking Manly for advocating for her family.

Manly said there is one Urgent and Primary Care Care clinic to serve more than 20,000 people who don't have a family doctor in Nanaimo, and the aging Nanaimo Regional General Hospital is often overcapacity.

Sophia worked at the homeless shelter from September 2022 until last summer, when she was advised by Manly to take medical leave. The already petite woman was drained of energy and had noticeably lost weight, he said.

She didn't have a family doctor and struggled to get a diagnosis for her rapidly declining health.

Manly said sick and weak patients attending the city's only walk-in clinic must line up at 5 or 6 a.m. in hopes of seeing a doctor when it opens at 8 a.m., which is tough on people. "I've been there and done that."

When Sophia got appointments at the Youth Wellness Centre at the Nanaimo Leisure Centre — in part to get a clinician's note for her extended health benefits — she was wrongly diagnosed with an eating disorder, even though she strongly rejected that as the cause of her illness.

In October, Sophia's mother, who had previously lost a son to an epilepsy-related illness while living in a rural area near Prince George, took her daughter to Nanaimo Regional General Hospital's emergency department, where Sophia was diagnosed as having hemorrhoids and given a prescription.

"Sophia trusted the professionals and assumed they knew what they were doing," said Manly.

A month later, on Nov. 16, Sophia was brought back to the hospital. This time, anemic and requiring a blood transfusion, she was admitted.

Manly said Sophia had a compromised immune system — something that could have been figured out with blood tests. "They figured it out only the second time she went to the emergency ward," he said. "She had a transfusion and they did blood work and as soon as they did that, they figured out what was going on."

On Nov. 24, according to her mother, Sophia was diagnosed with an internal infection that her immune system wasn't able to fight.

"Both of those things were completely detectable and preventable," said Manly. "Her death was preventable."

Sophia was transported to St. Paul's Hospital in Vancouver but it was too late — "sepsis had taken hold and she died three days later," Manly said

Jan. 28, 2024 - Moncton, NB, Canada - 49 year old Dan Wetmore was sick for a week. By the time he went to the hospital it was too late and he died from Strep A sepsis.

Don't sit on it' warns woman whose husband died of strep A
Dan Wetmore was in bed sick for days. By the time he went to the hospital, it was too late

Philip Drost · CBC News · Posted: Jan 28, 2024 3:26 PM AST | Last Updated: 6 hours ago

Dan Wetmore, right, with his wife, Kim, and son, Zach. (Kim Wetmore) Kim Wetmore is urging people to go to the hospital or get a test if you've got symptoms of strep A. She doesn't want people to have to go through the same pain she is going through now.

Her husband, Dan Wetmore, died of strep A in Moncton, N.B., on Jan. 19 at the age of 49. He had been sick for more than a week.

"By him putting it off and putting it off and putting it off, it ended his life," said Wetmore.

Canada is seeing a record number of cases of invasive Group A strep, a bacterial infection that kills roughly one in 10 people who contract it, according to data obtained by CBC News. There were more than 4,600 cases confirmed in Canada in 2023.

Invasive Group A streptococcal disease happens when the common strep A bacteria spreads beyond the places it typically infects, such as the throat or skin, where it can cause necrotizing fasciitis, known as flesh-eating disease.

[Jan. 14, 2024](#) – 18 year old Nat Manhertz had a strep throat but deteriorated rapidly with sepsis and had to have all her limbs amputated.

When Nat Manhertz experienced terrible head, neck and stomach pain, she visited the emergency room, where she was diagnosed with strep throat. But her condition quickly progressed, and she experienced septic shock. *Courtesy Manhertz family*

Despite experiencing cardiac arrest and organ failure because of septic shock, Nat Manhertz is doing well now. She's looking forward to receiving her prosthetic devices and learning how to use them. *Courtesy Manhertz family*

On Sunday in May 2023, Nat Manhertz started off having a fever and sore throat, so she took a sick day from school on Monday. She felt a little better and went to school on Tuesday. Almost immediately upon arriving, her symptoms intensified.

"I felt like I was about to pass out," Nat Manhertz says. "I (was) not able to try to drive home."

Her mom picked her up, and she tried napping when she got home.

"I was in constant, aching pain. Everything hurt," she recalls.

After experiencing stomach and neck pain with a headache, Nat Manhertz visited urgent care, where doctors told her she had a migraine. They prescribed medication, but it did little to ease her pain. She woke from a nap feeling extremely uncomfortable.

"She was like, 'I've never felt this pain before,'" Thelia Manhertz recalls.

Thelia Manhertz took her daughter to the emergency room, where doctors ran tests and diagnosed Nat Manhertz with strep throat. But they also learned something shocking: Nat Manhertz's organs were failing. Doctors transferred the teen to Children's Health Care of Atlanta by flight. When her mom arrived, doctors said her daughter was in serious condition and had experienced cardiac arrest.

"(They said) she's going into septic shock. I'm like, 'What is that?'" Thelia Manhertz says. "They're like, 'We have to get her onto some ... machine immediately to save her life.'"

As Nat Manhertz battled sepsis, the capillaries in her limbs didn't work properly, causing her tissues to die. Her skin sloughed off and smelled like fish, she says, and undergoing bandage changes felt excruciating.

"My hands were just like hard rocks. I couldn't move them," she recalls. "I came to the acceptance mentally that this is not getting any better. This is gross. Go ahead and take them off because I don't want them anymore."

After grappling with sepsis, Nat Manhertz eventually had to have all four limbs amputated. While she's "still processing" her experience, she knows the care she received saved her life.

Jan. 9, 2024 - UK - 38 year old Kirsten Martin, a bride to be, developed crippling stomach pains over Christmas and died 2 weeks later from SEPSIS on Jan. 9, 2024.

Kirsten Martin and Ant Johnston before her death (Image: Ant Johnston)

A bride-to-be has suddenly died from **sepsis** to the shock of her fiancé, who thought she was suffering from "womens problems."

Kirsten Martin met Ant Johnston at work and the couple lived together in Penwortham, Lancashire. The pair got **engaged** two months ago and planned on tying the knot in November of this year. But just before **Christmas**, Kirsten, 38, began developing crippling stomach pains with no signs of improvement. Staying in the Royal Preston Hospital over Christmas, her fiancé Ant explained to Lancashire Live that she was put into an induced coma on the evening of Boxing Day.

This was the last time her partner and dad, Allan, were able to speak to her before she unexpectedly passed away on January 9. Ant said: "She was having problems with her belly, but me and Kirsten just thought it was woman's problems and she was always putting a hot water bottle on it. It was only for a week or so before we went to hospital.

"We live on a Progress Housing estate, but we own our house and two weeks before she went into hospital, around December 17, she didn't turn up for work. Now I've never not been able to get hold of her and I couldn't get hold of her. All I was thinking back then, was 'it her appendix?'"

Luckily, a friend went round to their home and found Kirsten awake but in a bad way, so she called 111 for further advice. Two days later, Kirsten was showing no signs of improvement and Ant decided to take her to hospital to rule out anything sinister. After being admitted to hospital, she was kept in overnight and monitored by medical experts who were unable to determine the problem.

Oct. 13, 2023 - Toronto, ON - 39 year old Canadian doctor (COVID-19 Vaccinated) Dr. Adam Robert Rossi died Oct. 13, 2023. He was diagnosed with HLH, had a stroke & sepsis (I was informed by someone who knew the case).

Dr. Adam Robert Rossi

JULY 24, 1984 - OCTOBER 13, 2023

IN THE CARE OF
MacKinnon Family Funeral Home

Dr. Adam Robert Rossi age 39 of Toronto Canada. Passed away on October 13, 2023 in Secaucus, New Jersey. It is with deep sadness that the family of Dr. Adam Robert Rossi, Beloved Son, Brother, Nephew, Uncle, Cousin and Friend passed away with his family surrounding him on October 13, 2023. Adam was a beautiful person who spread joy and happiness wherever he went. Though he left this world far too soon, he left this world a better place.

Adam was passionate about helping others and not only achieved his dream of becoming a pediatrician but he also earned several degrees in medicine, surgery, hematology, oncology and Palliative and Hospice at Virginia Commonwealth University until 2022. He spent his last year at the world-renowned Pediatric cancer hospital MSK Sloan in Manhattan. Even though he was there for a short time. The impression he left on both staff & patients will never be forgotten. His memory and legacy will live on forever through VCU.

They are in the process of creating an award to be giving to a trainee in pediatrics. It will be named the Adam R. Rossi Award and will be given in loving memorial Of Dr. Adam Rossi to any level of pediatric trainee. Dr. Rossi provided exceptionally compassionate care, demonstrated inexhaustible optimism, and provided overflowing encouragement to his fellow trainees during his time as a resident and during both of his fellowships at the Children's Hospital of Richmond. The recipient of this award will exemplify these characteristics embodied by Dr. Rossi.

Sep. 30, 2023 - Peabody, MA - Lisa Dunbar-Link died unexpectedly on Sep. 30, 2023 of sepsis after an emergency surgery.

A young mother has revealed how she almost died from **sepsis** when she developed the deadly condition after scratching herself on a bowling ball.

Nakita Harden, 33, from Norfolk, claims her brush with death began during an innocuous game of bowling with her boyfriend when she said she scratched her thumb on the inside of a bowling ball.

The mother-of-two said she initially brushed off the scratch as a minor cut but became concerned when she noticed a pain in her thumb later that evening.

Nakita showed it to her boyfriend Jordan who said he thought he recognised the beginnings of a tell-tale sign of the condition - a tracking line on her arm.

Nakita, a sales manager said: 'I didn't think anything of it at first. You get scratches all the time.'

While Nakita worried that she would no longer have a knuckle after the operation, mercifully, the part of her hand that was removed with the infection did grow back, and she made a full recovery

Sep. 12, 2023 - 36 year old Former NFL football player 36 year old Mike Williams died on Sep. 12, 2023 after being hospitalized following a construction accident while working as an electrician in August. Cause of death: sepsis with cerebral abscesses and necrotizing Lobar Pneumonia.

Former Tampa Bay Buccaneers receiver died of a rare variety of bacterial sepsis stemming from tooth decay, according to an initial case summary report from the Hillsborough County Medical Examiner Office.

By [Olivia George](#) *Times staff*

Published Dec. 21 | Updated Dec. 22

Former pro football star Mike Williams died from a rare variety of bacterial sepsis and related complications, days after he was removed from life support after sustaining injuries from an August workplace accident, authorities confirmed Thursday.

Williams died Sept. 12 in hospice care at St. Joseph's Hospital in Tampa, around the corner from the stadium where he once dazzled crowds as a receiver for the Tampa Bay Buccaneers. He was 36.

His death was caused by "Bacterial Sepsis with Cerebral Abscesses and Necrotizing Lobar Pneumonia due to multiple Dental Caries and retained tooth roots," according to an initial case summary report from the

My Take...

According to mainstream media, Sepsis deaths in the UK are up 30%.

It's not just the increased numbers.

Young, healthy adults are dying from Sepsis. This is unprecedented.

Those who survive lose fingers and limbs (multi-organ failure, blood clots, cardiac arrest, etc)

This is a consequence of COVID-19 mRNA Vaccine Induced Immune system damage.

Some people are calling this "VAIDS" (Vaccine Induced AIDS), a term I'm not very fond of.

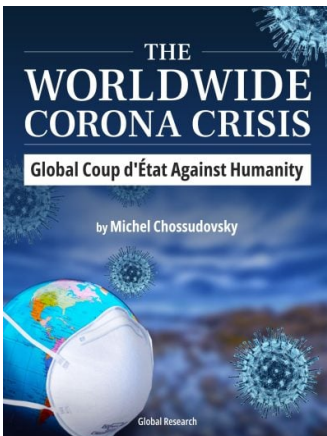

We don't know how long COVID-19 Vaccine Immune damage lasts, but it appears to be a common Long term side effect.

As horrific as they are, these cases are not mysteries at all. Doctors are simply ignoring the cause to protect the vaccines and keep their jobs.

Dr. William Makis is a Canadian physician with expertise in Radiology, Oncology and Immunology. Governor General's Medal, University of Toronto Scholar. Author of 100+ peer-reviewed medical publications.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky's book is a rock

upon which to sustain our fight. -Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden "plandemic"; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test - which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that "there is no causal relationship between the virus and economic variables." In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. -David Skripac

A reading of Chossudovsky's book provides a comprehensive lesson in how there is a global coup d'état under way called "The Great Reset" that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
