

# Shell Game? There remains no FDA approved COVID vaccine in the United States

Is Pfizer is using children as legal human shields to get full authorization?

*I fact checked the fact checkers and couldn't believe what I found. Despite the corporate press, Big Pharma, and the federal government telling us otherwise, it is absolutely true that there is no FDA approved COVID-19 vaccine available in the United States today. And there are no plans to make one available any time soon.*

I know it's hard to believe, but it's 100% true.

And this reality implicates both Big Pharma and the US Public Health bureaucracy in an incredible scandal.

On August 23, the FDA granted full approval for a COVID-19 vaccine to Pfizer-BioNtech for a specific product sold under the brand name Comirnaty.

The landmark moment — the “full approval” endorsement from the FDA — was heralded by the Biden Administration and countless states, and quickly leveraged to coerce millions into taking the shots. This product, Comirnaty, was fully authorized for the “prevention of COVID-19 disease in individuals 16 years of age and older.” Yet Comirnaty itself has never made its way into the United States. The fully-approved version is nowhere to be found within our borders.

A separate product, which remains under emergency use authorization (EUA), is the only “Pfizer shot” available in the United States. Early on, Pfizer and its government allies seemed to have a reasonable explanation for this issue. They claimed that Comirnaty was not yet available because the EUA shots were still lining the shelves, and claimed that the FDA-approved version would be available to all soon.

Now, it's been over 4 months since full approval, and Comirnaty is still not being distributed.

[The FDA has recognized Comirnaty as a “legally distinct” product](#) with “certain differences,” but claims it does not impact safety or effectiveness of the shots. “Fact checkers” leverage the latter point of safety and efficacy to claim that people are still getting access to ingredients akin to the fully approved product.

But here's the issue: they have yet to explain why people still can't get Comirnaty, now 128 days after full approval.

And if it is the case that the two products are the exact same thing, the FDA has not explained why they only approved a distinct product named Comirnaty, and not the

injection currently being sold under the EUA label. Why won't the FDA approve the EUA product? Pfizer doesn't want them to. You'll see in a moment.

### Is Comirnaty interchangeable with other COVID-19 vaccines?

The FDA-approved Comirnaty (COVID-19 Vaccine, mRNA) and the two EUA authorized formulations of Pfizer-BioNTech COVID-19 Vaccine for ages 12 years and older, when prepared according to their respective instructions for use, can be used interchangeably without presenting any safety or effectiveness concerns. The products are legally distinct with certain differences that do not impact safety or effectiveness.

([bigger](#))

The [CDC continues to confirm that Comirnaty is "not orderable at this time."](#) Moreover, the CDC currently states that "Pfizer does not plan to produce any product with these NDCs (National Drug Codes) and labels over the next few months while EUA authorized product is still available and being made available for US distribution."

CARTON, 195 MULTI- DOSE VIALS	00069- 1000- 01	VIAL, 2 mL, MULTI-DOSE VIAL	<b>COMINARTY products are not orderable at this time.</b> NDCs are listed per FDA Structured Product Label (SPL) document for the BLA licensed product. These codes are not included in CDC Vaccine Code Set files at this time. Pfizer has provided the following statement regarding the COMINARTY branded NDCs and labels: "Pfizer received FDA BLA license on 8/23/2021 for its COVID-19 vaccine for use in individuals 16 and older (COMIRNATY). At that time, the FDA published a BLA package insert that included the approved new COVID-19 vaccine tradename COMIRNATY and listed 2 new NDCs (0069-1000-03, 0069-1000-02) and images of labels with the new tradename. At present, Pfizer does not plan to produce any product with these new NDCs and labels over the next few months while EUA authorized product is still available and being made available for U.S. distribution. As such, the CDC, AMA, and drug compendia may not publish these new codes until Pfizer has determined when the product will be produced with the BLA labels."

Now, back to the trillion dollar EUA question.

Pfizer is likely refusing to make the fully authorized version available, while continuing to sell an EUA product because doing so opens up Pfizer and BioNTech to legal liability issues.

An EUA fully protects the drugmaker and grants zero legal recourse to the patient.

Now, here's where it all gets very nefarious.

In order for Pfizer to be granted legal liability protection for their fully authorized Comirnaty shot, they must first secure full approval for the children's version of their COVID-19 shot. [Steve Kirsch has explained this at length last month on his Substack.](#)

Additionally, Robert Kennedy Jr mentioned it on a recent [podcast with Mikhaila Peterson](#). I looked into these claims extensively, and they are completely accurate. The National Childhood Vaccine Injury Act (NCVIA), which was passed into law in 1986, provides a legal liability shield to drug manufacturers if they receive full authorization for all ages.

Pfizer needs approval for children so that it can protect itself from lawsuits. The company is working with regulators, even clandestinely altering vaccine ingredients (a process that should require them to get full approval for an entirely separate product), to clear the path to legal indemnity.

Now you know why Pfizer, Moderna, and others are working relentlessly to authorize their products for children, who face near-zero risk from COVID-19, but continue to showcase alarming side effects from the vaccine.

If Comirnaty was available for adults in the United States, Americans would be able sue Pfizer for vaccine injuries. If Comirnaty is for all ages, that means Pfizer receives extensive legal protection. Big Pharma is using children as legal human shields for their products. Let's hope they don't get away with it again.

There is currently no fully authorized COVID-19 vaccine available in the United States today, and this reality has been attacked relentlessly by the corporate press. "Fact checkers" at [Newsweek](#), [USA Today](#), [Reuters](#) the [Associated Press](#), and elsewhere peddled false information to cover up this absolute fact.

If you run a [Google search](#) on this issue, you will find the aforementioned "fact checks" as evidence that Comirnaty is available, when it is most certainly not available. Nobody in the United States is receiving the legally distinct, fully authorized shot, because that shot makes Big Pharma and corrupt regulators more legally vulnerable than they want to be.
