

# Should Measles Vaccination be Compulsory?

Measles vaccination has substituted one problem for another

*Supplementary to my earlier letter [1] it strikes me that public criticism of vaccine products may come a poor third in the spread of measles in comparison with failure of outreach and failure of the vaccine technology itself. In addition to the 1996 paper by Markowitz which I cited [2] I note a number of papers pointing to failure of immunity as a result of the programme [3-11].*

Even with 100% coverage and three doses it seems unlikely that synthetic herd immunity is set to do anything but decline: meanwhile censoring and criminalising critics and dissenters is only distracting in a politically unpleasant way from the problem. I am personally grateful to the editor for her recent call for “civil discourse, and debate” [12].
