*Never before have so many athletes [dropped dead](#) than since early 2021 when Wuhan coronavirus (Covid-19) “vaccines” were first unleashed under Operation Warp Speed.*

According to the data, athlete deaths are up 1,700 percent compared to the monthly averages recorded since 1966. And if things continue on their current trajectory, the 2022 data will show upwards of a 4,120 percent increase in athlete deaths.

In March of this year alone, three times as many athletes died compared to the previous annual average. That increase shows no signs of slowing as the full impact of Fauci Flu shots on public health is only just getting started. (Related: Check out our [earlier coverage](#) about some of the athletes who have died following the release of Chinese Virus injections.)

According to research out of Switzerland that was published back in 2006, between 1966 and 2004 - this is 39 years - there were 1,101 “sudden deaths” among otherwise healthy athletes under the age of 35. Comparatively, between January 2021 and April 2022 - this is just 16 *months* - there were at least 673 sudden deaths among athletes of the same demographic.

“This number could, however, be much higher,” notes *Exposé News*. “So that’s 428 less than the number to have died between 1966 and 2004. The difference here though is that the 1,101 deaths occurred over 39 years, whereas 673 recent deaths have occurred over 16 months.”

**Before Fauci Flu shots, only about 28 athletes per YEAR died for no apparent reason - in 2021 there were at least 394 deaths!**

To give you a better understanding of the increase in deaths being seen, consider the fact that from 1966 to 2004, the annual average of sudden athlete deaths was 28. In January

2022 alone, *three times* that number occurred in just one month. That same tripling of deaths was seen in March 2022 as well.

“The 2021 total equates to 394 deaths, 14x higher than the 1966 to 2004 annual average,” *Exposé News* explains. “The Jan to April 2022 total, a period of 4 months, equates to 279 deaths, 9.96x higher than the annual average between 1966 and 2004.”

“However, if we divide the 66 to 04 annual average by 3 to make it equivalent to the 4 months’ worth of deaths so far in 2022, we get 9.3 deaths. So in effect, 2022 so far has seen deaths 10x higher than the expected rate.”

These are *shocking* statistics that prove, beyond a shadow of a doubt, that covid injections are killing people at an astounding rate. And these are athletic people who one would think have a greater resiliency than the average person consuming SAD (standard American diet) “food” and barely exercising.

Is there something to these shots that targets the healthy more than the unhealthy? Or is the time still coming for the unhealthy to succumb, *en masse*, to the same fate as these now-deceased athletes?

People all across the health spectrum are getting sick and dying from the shots even as you are reading this, so perhaps there is no discrimination happening. The shots are *poison*, and eventually that poison catches up to you.

A [recent study](#) published in the journal *Circulation* found that signs of cardiovascular damage, which is probably what took out many of the athletes, increase drastically following one’s second injection with the mRNA (messenger RNA) shot from either Pfizer-BioNTech or Moderna.

“The risk of heart attacks or other severe coronary problems more than doubled months after the vaccines were administered, based on changes in markers of inflammation and cell damage,” *Exposé News* explains, offering further insight into the matter.

“Patients had a 1 in 4 risk for severe problems after the vaccines, compared to 1 in 9 before. Their 5-year heart attack risk went from 11% to 25% thanks to the vaccines (that is a 227% increase).”
