Already in 2012, the Pentagon had established plans for the spread of an unmanned fleet of drones, pointing indelibly to the militarization of law enforcement and the derogation of the Posse Comitatus Act.

We like to think of the drone war as something far away, fought in the deserts of Yemen or the mountains of Afghanistan. But we now know it's closer than we thought. There are 64 drone bases on American soil. That includes 12 locations housing Predator and Reaper unmanned aerial vehicles, which can be armed.

Public Intelligence, a non-profit that advocates for free access to information, released a [map of military UAV activities in the United States](#) on Tuesday. Assembled from military sources — especially this little-known [June 2011 Air Force presentation](#) (.pdf) — it is arguably the most comprehensive map so far of the spread of the Pentagon's unmanned fleet. What exact missions are performed at those locations, however, is not clear. Some bases might be used as remote cockpits to control the robotic aircraft overseas, some for drone pilot training. Others may also serve as imagery analysis depots.

The medium-size [Shadow](#) is used in 22 bases, the smaller [Raven](#) in 20 and the miniature [Wasp](#) in 11. California and Texas lead the pack, with 10 and six sites, respectively, and there are also 22 planned locations for future bases. "It is very likely that there are more domestic drone activities not included in the map, but it is designed to provide an approximate overview of the widespread nature of Department of Defense activities throughout the US," Michael Haynes from Public Intelligence tells Danger Room.

The possibility of military drones (as well as those controlled by police departments and universities) flying over American skies have raised concerns among privacy activists. As the [American Civil Liberties Union explained in its December 2011 report](#), the machines potentially could be used to spy on American citizens. The drones' presence in our skies "threatens to eradicate existing practical limits on aerial monitoring and allow for pervasive surveillance, police fishing expeditions, and abusive use of these tools in a way that could eventually eliminate the privacy Americans have traditionally enjoyed in their movements and activities."

As Danger Room [reported last month](#), even military drones, which are prohibited from spying on Americans, may "accidentally" conduct such surveillance — and keep the data for months afterwards while they figure out what to do with it. The material they collect without

a warrant, as scholar [Steven Aftergood revealed](#), could then be used to open an investigation.

The Posse Comitatus Act prohibits the U.S. military from operating on American soil, and there's no evidence that drones have violated it so far.

This new map comes almost two months after the Electronic Frontier Foundation (EFF) revealed [another one](#), this time of public agencies - including police departments and universities - that have a permit issued by the Federal Aviation Agency to use UAVs in American airspace.

"It goes to show you how entrenched drones already are," said Trevor Timm, an EFF activist, when asked about the new map. "It's clear that the drone industry is expanding rapidly and this map is just another example of that. And if people are worried about military technology coming back and being sold in the US, this is just another example how drone technology is probably going to proliferate in the US very soon."

Domestic proliferation isn't the same as domestic spying, however. Most — if not all — of these military bases would make poor surveillance centers. Many of the locations are isolated, far from civilian populations. Almost half of the bases on the map work only with the relatively small Raven and Shadow drones; their limited range and endurance make them imperfect spying tools, at best. It's safe to assume that most of the bases are just used for military training.

Privacy concerns aside, the biggest issue might be safety, as we were reminded on Monday when a [giant Navy drone crashed in Maryland](#).
