*An employee at a hospital in Fresno, Calif., [leaked an email](#) to the media showing that stillbirth rates have been spiking ever since the introduction of Wuhan coronavirus (Covid-19) “vaccines.”*

*In August of this year, there were 22 stillbirths at the facility, the email revealed. And the trend is only expected to continue, it went on to state. (Related: Some of Canada’s most-vaccinated areas saw [a 28-fold increase](#) in stillbirths due to covid injections.)*

So far in September, there have been seven stillbirths, though at the time of reporting only eight days had passed in the month. Extrapolated to October, we would expect the total number of stillbirths at the hospital in September to be around 40, or more than *twice* that of August.

Prior to Operation Warp Speed, the average number of stillbirths per month at the hospital in question was less than one. Only about two deaths every three months were reported at the facility prior to the rollout of Fauci Flu shots.

*The Epoch Times*, which was among the first to obtain the email in question, reached out to the head nurse who sent the email for clarification. No response was received as of this writing.

**As many as 28 out of 29 pregnant women who get “vaccinated” lose their babies**

According to Dr. James Thorpe, a Florida physician who specializes in maternal-fetal medicine, the contents of the leaked email are consistent with the findings of more than 1,300 peer-reviewed papers that have been published in the last 15 months.

Severe complications and death are both common outcomes post-injection for the Chinese Flu. Only a fraction of these cases appears in the government's Vaccine Adverse Event Reporting System (VAERS), however.

"This shot was designed to cross into the ovary; this shot was designed to cross into the brain barrier. This shot was designed to go everywhere," revealed Dr. Chris Alan Shoemaker in a powerful speech on Parliament Hill in Ottawa, Canada.

"And that's why people are dying in such strange circumstances, unexplained circumstances, and the numbers are horrific. Sixty-seven percent of people who get the vaccine while pregnant lose the pregnancy."

It turns out that Pfizer's own internal documentation shows that the figure is even higher, with 28 out of 29 pregnant women losing their babies after getting jabbed for the Wuhan Flu.

This is why Dr. Sucharit Bhakdi has repeatedly warned pregnant women against taking the vaccine(s). To do so is to basically have a death wish for the baby since the chances of stillbirth are exceptionally high.

"The vaccine package insert from Biotech even says that pregnant women aren't allowed to be vaccinated because vaccine injury cannot be ruled out," Bhakdi says.

"And if a young woman decides to get vaccinated, she should avoid becoming pregnant for two months."

Despite the warnings, many pregnant women have gone ahead and gotten injected anyway, resulting in many additional stillbirths and the needless suffering associated with this tragic loss of unborn human life.

"They knew and they did nothing about it," wrote a commenter. "They knew the clot shot didn't stop transmission and they lied. Biden lied and millions died or will die."

"All the grandstanding and ostracization of those who were skeptical and smart. All the relatives who mocked and shamed their children into getting it. They have no shame. They think we'll forget. I for one will never forget."

Another pointed out that these revelations are why some, including Emily Oster of *The Atlantic*, are now calling for covid "amnesty" - because they know We the People want not just answers but *justice* for these crimes against humanity.
