*A new study published in the European Journal of Epidemiology proves what we “conspiracy theorists” have been saying all along about the COVID-19 shots: They cause symptoms leading to COVID-19 diagnoses rather than prevent them.*

[The study](#), *Increases in COVID-19 are unrelated to levels of vaccination across 68 countries and 2947 counties in the United States*, was conducted by S. V. Subramanian, who is affiliated with Harvard Center for Population and Development Studies, and also the Department of Social and Behavioral Sciences, Harvard T.H. Chan School of Public Health.

The study looked at data from 68 countries and 2947 counties in the U.S.

Vaccines currently are the primary mitigation strategy to combat COVID-19 around the world. For instance, the narrative related to the ongoing surge of new cases in the United States (US) is argued to be driven by areas with low vaccination rates.

A similar narrative also has been observed in countries, such as Germany and the United Kingdom. At the same time, Israel that was hailed for its swift and high rates of vaccination has also seen a substantial resurgence in COVID-19 cases.

We investigate the relationship between the percentage of population fully vaccinated and new COVID-19 cases across 68 countries and across 2947 counties in the US.

They used COVID-19 data provided by the Our World in Data for cross-country analysis, available as of September 3, 2021.

For the county-level analysis in the US, they utilized the White House COVID-19 Team data,

available as of September 2, 2021.

Comparing countries with various rates of percentages of their population fully vaccinated for COVID-19, they found that “countries with higher percentage of population fully vaccinated have higher COVID-19 cases per 1 million people.”

At the country-level, there appears to be no discernable relationship between percentage of population fully vaccinated and new COVID-19 cases in the last 7 days (Fig. 1).

In fact, the trend line suggests a marginally positive association such that countries with higher percentage of population fully vaccinated have higher COVID-19 cases per 1 million people.

Notably, Israel with over 60% of their population fully vaccinated had the highest COVID-19 cases per 1 million people in the last 7 days.

The lack of a meaningful association between percentage population fully vaccinated and new COVID-19 cases is further exemplified, for instance, by comparison of Iceland and Portugal. Both countries have over 75% of their population fully vaccinated and have more COVID-19 cases per 1 million people than countries such as Vietnam and South Africa that have around 10% of their population fully vaccinated.

Likewise, in the U.S. the counties with the highest vaccination rates have the highest incidents of COVID-19 cases.

Across the US counties too, the median new COVID-19 cases per 100,000 people in the last 7 days is largely similar across the categories of percent population fully vaccinated (Fig. 2).

Notably there is also substantial county variation in new COVID-19 cases within categories of percentage population fully vaccinated. There also appears to be no significant signaling of COVID-19 cases decreasing with higher percentages of population fully vaccinated (Fig. 3).

Of the top 5 counties that have the highest percentage of population fully vaccinated (99.9–84.3%), the US Centers for Disease Control and Prevention (CDC) identifies 4 of them as “High” Transmission counties.

Chattahoochee (Georgia), McKinley (New Mexico), and Arecibo (Puerto Rico) counties have above 90% of their population fully vaccinated with all three being classified as “High” transmission.

Conversely, of the 57 counties that have been classified as “low” transmission counties by the CDC, 26.3% (15) have percentage of population fully vaccinated below 20%.

Read the [full study here](#). You might want to download the .pdf version, as these kind of studies proving Big Pharma and Government health agencies such as the FDA and CDC are lying to people, tend to be “retracted” once they are published.

COVID-19 vaccines not only offer no benefits, they are killing and injuring people, which is why so many dissenting doctors and scientists today call them “bioweapons.”
