

I Planned My Own Suicide After COVID Vaccine Left Me in Constant Agony

By [Luke Andrews](#) and [Emily Joshu](#)

Global Research, November 29, 2024

Brianne Dressed enrolled in a clinical trial for [AstraZeneca](#)'s Covid vaccine in 2020 in a bid to help the pharma giant develop a vaccine that would end the pandemic.

She was among the first group of Americans to receive the then-experimental Covid shot and said she felt like she was 'doing my bit' and thought it would be safe.

But Ms Dressed would never return to get her second dose, suffering from such a severe reaction within an hour of her first injection that she says she is now nearly completely disabled and was left spending months contemplating suicide just to 'escape' the pain.

And while the physical pain is excruciating — with her body vibrating daily as though she is being electrocuted, she said — she has now been outcast by many friends and family as an anti-vaxxer. Due to the pain, she is also [struggling to care for](#) her two children, 10 and 12.

Speaking to DailyMail.com, the 43-year-old said:

'The pain is something that I wouldn't wish on my worst enemy. This is the first thing I feel when I wake up in the morning and the last thing I feel when I go to sleep at night.

'My body feels like it is being electrocuted all the time, like this jarring sharp electrical sensation that moves throughout my body, head to toe, fingers, you know.

'There is no peace, no rest, no reprieve, the only time I get a break is when I take a whole lot of meds that allow me to sleep for a few hours — but I know that when I do this I am borrowing time from my future.'

In 2021, scientists at the National Institutes of Health diagnosed Ms Dressed with post-vaccine neuropathy — an extremely rare condition that occurs when a patient experiences tingling, numbness and weakness in their body following vaccination.

It can happen because proteins on the surface of some viruses are similar to those on nerve cells, causing the immune system to misfire and start to attack the nervous system.

Ms Dressed, from [Utah](#), was bedbound for months after first developing the complication because of the pain, and found herself unable to use her legs.

Now, with the help of medications, she can move again, but remains in constant pain and can't feel anything in her legs.

Ms Dressen says she is not anti-vax, and says she was actually very much in the 'mainstream mindset' regarding vaccines, before her reaction.

She had helped to get face masks for the local hospital and heard of two other friends also taking part in clinical trials who had no issues.

As part of the AstraZeneca trial, Ms Dressen said she signed a consent form that stated the pharma giant would support her financially if she suffered from a serious side effect due to the vaccine.

DailyMail.com has not reviewed this consent form and cannot confirm Ms Dressen's claims.

But Ms Dressen says to date the company has only sent her \$590, which pales in comparison to the up to \$400,000 she says she must spend annually for her medications.

In May, she sued AstraZeneca for breach of contract, and the case is now working its way through the Utah courts.

Covid vaccines are estimated to have prevented more than 3.2million deaths and 18.5million hospital admissions in the United States alone, according to estimates.

More than 270million people in the United States received a Covid vaccine, with more than 677million doses administered.

But the AstraZeneca shot was never approved in the US because of concerns over the vaccine causing blood clots in rare cases. It was, however, approved in Europe.

Thousands have since come forward saying they believe that Covid vaccines have left them with serious injuries that have permanently changed their lives.

The Countermeasures Injury Compensation Program (CICP), which was set up by the US Government to assist those who say they suffered a vaccine injury, has received more than 14,000 applications from people claiming they suffered a vaccine injury.

And resulting vaccine injuries are taking a mental toll as well. The UK CV Family — which represents people who believe they were injured by Covid vaccines — found in a survey that 73 percent of its members had considered suicide because of their injury.

Many who say they have suffered injuries from vaccines also reveal how friends and family have shunned them because of the stigma around speaking up about their injuries.

Ms Dressen's battle began within an hour of receiving the vaccine on November 4, 2020. She suffered from a tingling sensation like pins and needles in the arm that was injected with the shot.

It spread throughout her body and she was rushed to the ER four times in the following months seeking treatment. Doctors were not sure what to do, however, because the vaccine was still being trialed.

It was at this time she revealed she was losing the will to live, and turned to thoughts of suicide as a way to ease the pain.

She said:

'It wasn't like a small moment in time that I wanted to end my life, it was over several months.

'It wasn't like I was pacing around the house like, "I am going to die", it was me being totally silent and not being able to move and just fantasizing about an escape.

'It is not actually that people with these vaccine injuries want to die, we just need a break.'

AstraZeneca has accepted no responsibility for the injuries Ms Dressen suffered.

After a recent hearing for her case, Ms Dressen said she has learned 'everything I needed to know about this company'.

Image: Ms Dressen is pictured above at a hearing where she explained her experience to officials

She said:

'There is no interest there whatsoever to help me.

'They are going to fight this every step of the way and... they called my lawyers and said they would appeal the initial decision.

'My medications are about \$180,000 to \$400,000 a year, we had to re-mortgage our home, I can no longer work, lots of income has been replaced with a mountain of medical bills — it has been a dramatic change in our quality of life.'

A spokesperson for AstraZeneca did not return a DailyMail.com request for comment.

Ms Dressen spoke to DailyMail.com ahead of the release of her book on November 26, which is titled: ['Worth a Shot?: Secrets of the Clinical Trial Participant Who Inspired a Global Movement.'](#)

All proceeds from sales of the book are to be donated to React19 and UKCVFamily.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky’s book is a rock upon which to sustain our fight. —Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test - which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the

shutdown of the global economy. -**David Skripac**

*A reading of Chossudovsky's book provides a comprehensive lesson in how there is a global coup d'état under way called "The Great Reset" that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -**Edward Curtin***
