

# Technocracy Rising: Why It's Crucial to Understand the End Game

## Part I

By [Jesse Smith](#)

Global Research, December 19, 2024

Region: [USA](#)

Theme: [Intelligence](#)

*Major shake-ups are occurring across the global stage. History is replete with examples of breaks with the past from major political, economic, technological, and social upheaval. Throughout the ages, many self-serving individuals and groups have positioned themselves as rulers, financiers, benefactors, and thought leaders to steer change toward preferred outcomes. From the Pharaohs of Ancient Egypt to the Jacobin and Napoleon-led French Revolution in the late 18<sup>th</sup> century, societal transformation has been constant as one form of government replaces another.*

We have now arrived at yet another historical inflection point. The desire for political and economic reconstruction is being demanded globally as the gap between the ultra-wealthy and everyone else continues to accelerate. In recent years, populism has taken flight by inspiring the masses to reject the rule of “the elite” and chart a new course. However, without scrutiny, this movement and its key figures could be just as dangerous as the establishment they are attempting to usurp. In fact, what we are witnessing is not populism in its truest sense but techno-populism or technocracy, as it has been called since its inception in 1920.

Technocracy originated in the winter of 1918-19 when Howard Scott formed a group of scientists, engineers, and economists that became known in 1920 as the Technical Alliance — a research organization. In 1933 it was incorporated under the laws of the State of New York as a nonprofit, non-political, non-sectarian membership organization.” - [The Technocrat](#), Dec. 1964

## What Is Technocracy?

Historically, technocracy has not been well received. In fact, many who accurately comprehended its goals viewed it as a threat to democracy and the debt-based economic order run by the central banking establishment that has dominated the last century. Technocrats railed against this “Price System,” arguing it alone was to blame for the inequalities and inefficiencies of society. There is definitely some truth to their claims.

Under the Price System at its best there is not a single field of endeavor where the best technical standards are allowed to prevail. In other words, poverty, waste, crime, poor public health, bad living conditions, enforced scarcity, and low load-factors, are every one the direct and necessary consequences of the Price System... What we have tried to make clear is that it is the Price System itself, and not the individual human being, which is at fault.” - [Technocracy Study Course](#), Technocracy Inc. 1933, p.176

Technocracy can be defined simply as *an impersonal and scientific method of managing all aspects of a society*. Its primary concerns deal with how energy is produced and used. But it goes much deeper than this. One of the best explanations can be found in an issue of *The Technocrat* magazine from September 1937, where it states:

Technocracy is the science of social engineering, the scientific operation of the entire social mechanism to produce and distribute goods and services to the entire population of this continent. For the first time in human history it will be done as a scientific, technical, engineering problem. There will be no place for Politics or Politicians, Finance or Financeers, Rackets or Racketeers.”

The technocratic dream is revolutionary in scope, envisioning a total reorganization of industry, government, and law and order. They readily admit their intent is to socially engineer all of society, seize control of the production and distribution of all goods and services, and rid the world of rule by politicians and (traditional) financial controllers. The U.S. Constitution is also viewed as a relic, completely unfit to serve as a basis of governance and human rights.

Another job which has been neglected far too long is the rebuilding of our governmental machinery, from the village level right up to Congress. It cannot be avoided much longer, simply because the country has outgrown the constitutional clothes which the Founding Fathers tailored for it nearly two centuries ago. They have become as anachronistic, and as impractical, as a Pilgrim’s costume on an astronaut.” – Edith Chamberlain, *The Technocrat*, Dec. 1964

Technocrats make no pretense about maintaining a representative form of government be it a republic (as the USA was founded as) or democracy (what the USA has become). Its goal is to establish a scientific dictatorship to initiate and control all societal functions. Technocrats distanced themselves and were highly critical of fascists, communists, socialists, and other political movements but don’t have a problem with their own totalitarian style of rule termed a Technate.

Technocracy finds that the production and distribution of an abundance of physical wealth on a Continental scale for the use of all Continental citizens can only be accomplished by a Continental technological control, a governance of function, a Technate.”

– *Technocracy Study Course*, Technocracy Inc. 1933

Figure 22.1 from the *Technocracy Study Course* illustrates the point above revealing that technocracy is simply another form of top-down rule with a Continental Director having total authority of all societal functions.

# ADMINISTRATION CHART OF THE NORTH AMERICAN TECHNATE

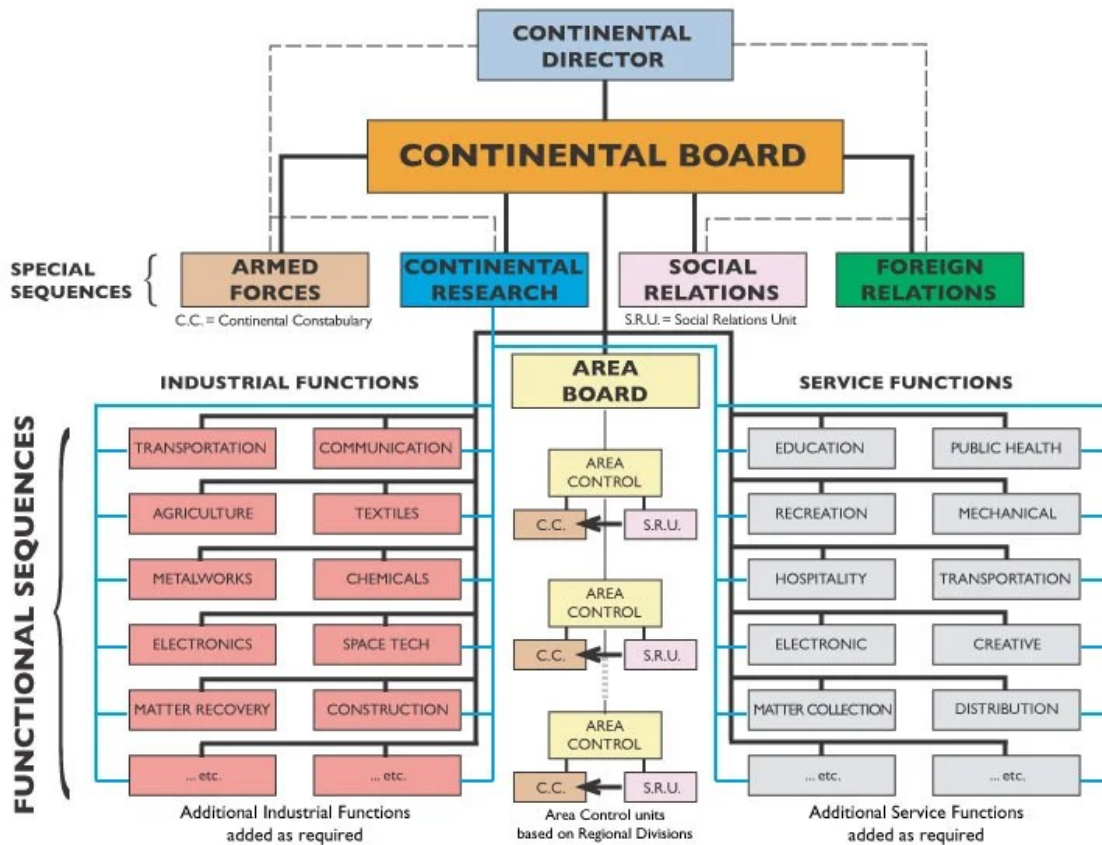

Figure 22.1 - Technocracy Study Course

A December 1964, issue of [The Technocrat](#) magazine further explained that:

Technocracy holds that all decisions pertaining to the functional operation of the society

— the production and distribution of goods and services, research, and governance — should be made by technical men and women. This does not mean that the technical people should leave their technical positions and go into politics, law, business promotion, public relations, and moral philosophy. Rather, it means that the scientists, technologists, engineers, and technicians shall continue to operate as such and that the decision-making of the society be moved into their functional realms.”

## **Silicon Valley and Washington, D.C. Form the Seat of Modern Technocracy**

Regardless of one’s comprehension of technocratic plans, a monumental reshaping of governments, economies, and societies is occurring, but not by elected representatives, constitutions, creeds, or the will of the people. **Power is now concentrated in the hands of an exclusive class of scientists, technologists, engineers, and technicians—many of whom also happen to head multi-billion-dollar corporations.**

*We are also finding that technology has made people more isolated and infringes upon privacy with consequences yet to be realized. When we see the relationship between tech companies and government flourish, we are ultimately watching the implementation of a full-fledged technocracy.”*

- Pendleton, Joseph. Californication: The Rise of the American Technocracy (p. 20). The Conservatarian Press.

Silicon Valley is the seat of modern technocracy. Big Tech is the euphemism for which it’s currently known. The World Economic Forum defines this dynamic as public-private partnerships (PPP).

**Elon Musk, Peter Thiel, and Marc Andreesson** are some of today’s most prominent techno-populists. Many believe they are modern day Justice League type heroes leading the world to newfound freedom (or at least in the United States). All were [major contributors](#) to **Donald Trump’s** reelection campaign in 2024. **Vice President-Elect J.D. Vance** has deep connections [to Peter Thiel](#), indicating how close technocrats truly are to running the country.

**[Jeff Bezos, Tim Cook, and Sam Altman](#)** are also among the many tech gurus aligning themselves with the newly elected Trump administration. These endorsements indicate that for now, technocrats are content with using politicians and the political system to quietly transform the government into a full-fledged Technate from the inside out and vice versa.

It is the man who has command of the technical information who makes the real decisions in the functional phases of modern life. He is the only one who understands what needs to be done and how to do it. The politicians and financial manipulators who pretend that the right of decision is theirs are helpless without the technical men." -

*The Technocrat*, Dec. 1964

Something else technocrats correctly understood was the sham of voting and elections. Perhaps this is another reason why they stayed hidden in times past, realizing the populace was not ready to accept this truth.

In the United States, it is generally assumed that the people vote for the kind of government they want, but that is not exactly true. Technically, they do not even vote directly for their president; they vote for electors who, in turn, are tacitly committed to vote for indicated candidates, the exact rules varying with the different states. Moreover, the public has little voice in choosing the candidates; it usually ends up with their having a choice between two men chosen by the respective political party 'machines.' And they have less choice concerning the policies of the president. Once elected, the president is under no real obligation to heed the desires of the people and often acts contrary to his campaign promises." *The Technocrat*, Dec. 1964

Would Donald Trump have been "reelected" without the help of the aforementioned technocrats? Now that he will resume the Presidency, will he be more beholden to the people or his big moneyed investors from Silicon Valley?

## **Why Is Technocracy Rising Now?**

Technocracy has long been resisted by traditional powers and was originally conceived only for the North American Continent. Today, technocracy is rising from the ashes like the Phoenix legend to become a global force to be reckoned with. I believe this is largely because of the pending economic meltdown. The debt-based, fiat currency system is at the end of its life cycle and the central bank establishment is looking for new ways to maintain control of the monetary system. They have joined ranks with the technocrats who were correct in predicting that the system would crash (though it has yet to take place due to manipulation tactics keeping it at bay).

If the human race on this Continent is to survive the crash of the Price System, Technocracy will have to be put into practice." - [Technocracy in Plain Terms](#), Technocracy Inc. 1939

By adopting technocracy, the banking elite not only can retain control over the monetary system, they will also cement their rule over all industries, natural resources, governments, institutions, and people.

## **Technocracy Wouldn't Exist Without Advances in Technology**

Big Tech products are ubiquitous and thought to be indispensable in our ultramodern, future-oriented world. AI, robotics, and the Internet of Things (IoT) are touted as catalysts that can lead to a future of ease and prosperity for all. These technologies and more are considered part of the Fourth Industrial Revolution aka Industry 4.0, where the shift to digital technologies will supersede past ways of conducting business, communicating, and governing with one major caveat: the potential to overtake humanity itself and render humans as "[hackable animals](#)" and "[useless people](#)." Consider the following statements from some of the world's most prominent thought leaders.

*"Technologies that are emerging today will soon be shaping the world tomorrow and well into the future - with impacts to economies and to society at large. Now that we*

*are well into the Fourth Industrial Revolution, it's critical that we discuss and ensure that humanity is served by these new innovations so that we can continue to prosper."*

- [Mariette DiChristina](#), (former) Editor-in-Chief of Scientific American, and chair of the Emerging Technologies Steering Committee

*"We must develop a comprehensive and globally shared view of how technology is affecting our lives and reshaping our economic, social, cultural, and human environments. There has never been a time of greater promise, or greater peril."*

- [Klaus Schwab](#), Founder and Executive Chairman, World Economic Forum

*"Now, fast forward to the early 21st century when we just don't need the vast majority of the population... Most people don't contribute anything to that, except perhaps for their data, and whatever people are still doing which is useful, these technologies increasingly will make redundant and will make it possible to replace the people."*

- [Yuval Noah Harari](#), Author, Historian, and Philosopher

*"Probably none of us will have a job."*

- [Elon Musk](#) (referring to the rise of Artificial Intelligence)

Paradoxically, technocracy claims to enable widespread prosperity while also rendering the lot of humanity replaceable, useless, and without meaning. How can this be? To technocrats of yesteryear, there was not much difference between human beings, dogs, pigs, and cars. The belief that humans are the capstone of all creation and made in the image of God was routinely mocked and discredited. In a chapter entitled, **The Human Animal**, the *Technocracy Study Course* further elaborates on its base view of humanity, stating:

The developments in the fields of physiology, biochemistry and biophysics, chiefly since 1900, are at last bringing us down to earth. Attention has already been called to the fact that the human body is composed chemically of the ordinary substances of which rocks are made. So are dogs, horses and pigs. In an earlier lesson, while discussing the 'human engine,' we pointed out that the human body obeys identically the same laws of energy transformation as a steam engine. This also is true of dogs, horses and pigs. These facts might lead one to suspect that human beings are very far removed from the semi-supernatural creatures they have heretofore supposed themselves to be...

When we observe a human being we merely perceive an object which makes a certain variety of motions and noises. The same is true, however, when we observe a dog or a Ford car."

Modern technocrats also view the human as mere biological material that can be manipulated as needed, as evidenced by World Economic Forum Founder and Chairman [Klaus Schwab](#):

This Fourth Industrial Revolution is, however, fundamentally different. It is characterized by a range of new technologies that are fusing the physical, digital, and biological worlds, impacting all disciplines, economies and industries, and even challenging ideas about what it means to be human."

Contemporary technocracy has now merged with transhumanism forming a dangerous combination, as noted by author Patrick Wood, who wrote:

Technocrats see science and technology as the answer to improve and control society; transhumanists see the same science and technology as the answer to improve and control the human condition.”

- *The Evil Twins of Technocracy and Transhumanism* (p. 19). Coherent Publishing, LLC.

## Why You Should Care About the Rise of Technocracy

Hopefully all the dots are starting to connect, enabling you to see where all of this is heading. Technocracy’s ascendance is a threat to all of humanity. Technocrats promise a utopian existence where abundance is the norm and work is optional, if not completely unnecessary. The self-appointed leaders believe they know best how to manage the world’s resources and its people. To accomplish these lofty goals, the social structure will have to undergo drastic changes which include redefining work and wages. The following excerpt from the Technocracy Study Course provides a detailed overview of what this entails.

“If the production is to be non-oscillatory and maintained at a high level so as to provide a high standard of living, it follows that consumption must be kept equal to production, and that a system of distribution must be designed which will allow this. This system of distribution must do the following things:

1. Register on a continuous 24-hour time period basis the total net conversion of energy, which would determine (a) the availability of energy for Continental plant construction and maintenance, (b) the amount of physical wealth available in the form of consumable goods and services for consumption by the total population during the balanced load period.
2. By means of the registration of energy converted and consumed, make possible a balanced load.
3. Provide a continuous 24-hour inventory of all production and consumption.
4. Provide a specific registration of the type, kind, etc., of all goods and services, where produced, and where used.
5. Provide specific registration of the consumption of each individual, plus a record and description of the individual.
6. Allow the citizen the widest latitude of choice in consuming his individual share of Continental physical wealth.
7. Distribute goods and services to every member of the population.

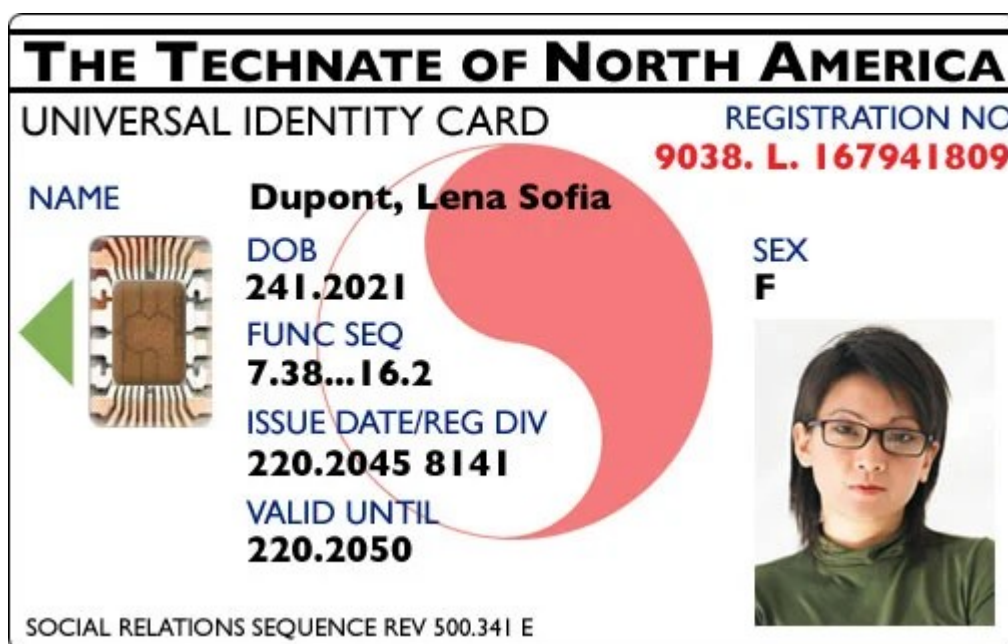

In short, the goal of technocracy is to micromanage everything you do, produce, and consume through nonstop surveillance. This was not technically possible with the crude paper methods proposed by early technocrats. However, it is becoming achievable with the advent of digital technologies such as biometrics, Big Data, geospatial intelligence, digital currency, AI, and 5G. In a Technate, there will be no free-market economy where the average person could obtain wealth by starting a business or embarking upon a lucrative career path. Instead, technocrats promise each person a share of the overall wealth produced through the issue of Energy Certificates.

Under a technological administration of abundance, there is only one efficient method—that employing a system of Energy Certificates...These certificates are merely pieces of paper containing certain printed matter. They are issued individually to every adult of the entire population. The certificates issued to an individual may be thought of as possessing some of the properties both of bank cheque and of a traveler’s cheque. They would resemble a bank cheque in that they carry no face denomination. They

receive their denomination only when being spent. They resemble a traveler's cheque in that they possess some means of **ready identification**, such as counter-signature, photograph, or some similar device, so as to establish easy identification by the person to whom issued, and at the same time remain absolutely useless in the hands of anyone else." - *Technocracy Study Course*, p.230

Today, Energy Certificates could take the form of [Universal Basic/High Income](#) payments issued in the form of Central Bank Digital Currency (CBDC) or some other form of digital currency. Corporate transactions could be conducted via [carbon credits](#). Regardless of the mechanism of financial transfer, the individual will be totally dependent on the Technate with everything one does requiring a digital ID.

Technate of North America ID Card - Source: Technocracy Technate Picture Archive

The American dream of upward mobility, already heading toward extinction, will receive the knockout blow in a technocratic regime. Instead, compliance and energy usage will determine your level of prosperity. Property rights will also go out the window as the plan is to revolutionize housing into energy-efficient units with little variety and few manufacturers. This could occur today through the combination of an economic crisis wiping out individual wealth and mass [printing](#) of [3D houses](#) fit for the technocratic era.

As envisioned, technocracy is no better than communism, fascism, or socialism. It's just another power grab by individuals who believe they are smarter than the rest of us, with a promised utopia that will never materialize.

These prognostications may seem far-fetched now, but the rest of this series will spell out in detail how close the technocratic fantasy is becoming a reality. It is important for people everywhere to understand the implications of what is taking place and not be fooled by wolves in sheep's clothing proclaiming a new [golden age of humanity](#) is imminent. The question is, a golden age for who? Cui bono?
