*Filmmaker **Regis Tremblay** states what few others dare to say. Humanity is on the brink of extinction! Nuclear power is not safe. 48 of America's nuclear power plants are leaking and there is no way to get rid of nuclear waste.*

America's reckless provocations of both Russia and China, two nuclear-armed countries, risk a nuclear holocaust from which no one survives. Climate change and global warming, if not mitigated immediately, will end the human experiment on earth sooner rather than later.

A shocking documentary that traces the origins of U.S. genocides, military interventions and wars from the 15th century when the white, colonial explorers first came to the Americas to the very present. American Exceptionalism, Manifest Destiny, and the right to claim the earth and its resources as their own are the beliefs that are the foundation of American foreign policy in the 21st Century that has humanity on the brink of extinction.

Dr. Helen Caldicott, Ray McGovern, Chris Hedges, Ann Wright, Peter Kusunick, Bill McKibben, David Vine and other activists, scholars, and authors explain and clarify the crisis and threats to life on the planet.

The only real hope lies in the result of the epic battle for humanity's survival between two contrasting world views. On one side is the unipolar, capitalist world-domination by the U.S. enforced by the most lethal military the world has ever seen.

On the other side is a view held by Russia, China and the BRICS nations built on a multi-polar world based on respect, the sovereignty of all nations, international law, the equal value of all people, and cooperation.

So here we are. Humanity's epic battle for survival. An old paradigm based on white, colonial domination and empire versus the shared vision of others who are working for a peaceful world based on justice, international law and the prosperity of all people.

The only question is, will the crazed neocons in Washington, realizing they have lost, take the whole world down with them.
