

The Media Response to the Growing Influence of the 9/11 Truth Movement.

Part II: A Survey of Attitude Change in 2009-2010

By [Elizabeth Woodworth](#)

Theme: [Media Disinformation](#), [Terrorism](#)

Global Research, September 21, 2015

15 February 2010

Abstract

In the past year, in response to emerging independent science on the 9/11 attacks, nine corporate, seven public, and two independent media outlets aired analytic programs investigating the official account.

Increasingly, the issue is treated as a scientific controversy worthy of debate, rather than as a "conspiracy theory" ignoring science and common sense.

This essay presents these media analyses in the form of 18 case studies.

Eight countries - Britain, Canada, Denmark, France, the Netherlands, New Zealand, Norway and Russia - have allowed their publicly-owned broadcasting stations to air the full spectrum of evidence challenging the truth of the official account of 9/11.

This more open approach taken in the international media - I could also have included the Japanese media - might be a sign that worldwide public and corporate media organizations are positioning themselves, and preparing their audiences, for a possible revelation of the truth of the claim that forces within the US government were complicit in the attacks - a revelation that would call into question the publicly given rationale for the military operations in Iraq, Afghanistan, and Pakistan.

The evidence now being explored in the international media may pave the way for the US media to take an in-depth look at the implications of what is now known about 9/11, and to re-examine the country's foreign and domestic policies in the light of this knowledge.

I. Introduction

Until 2009, doubts about the official 9/11 story were briefly entertained by the mainstream media on each anniversary of the event, allowing the independent research community only a fleeting moment once a year to publicly voice its findings.

But after crucial scientific evidence emerged in April 2009 to challenge the official story of how the towers fell, a spate of European media reports followed. The news coverage of this evidence seems to have opened the door to more serious reflection on all aspects of the 9/11 issue in the major media.

The first paper in my series, "The Media Response to 9/11," dealt with the New Statesman's

grudging recognition of Dr. David Ray Griffin, the world's "top truther" (as it dubbed him), placing him number 41 among "The 50 People Who Matter Today."¹ Since this admission in September 2009, the issue has gathered increasing momentum.

The collective content issuing from this new momentum is presented here in the hope that it will embolden other major media to take up the pivotal controversy concerning 9/11, and pursuing the truth wherever it may lead.

Observations on the Analysis

While carrying out my analysis, I observed five new features in the media treatment of the 9/11 issue that developed as 2009 progressed. They are listed here, so that readers might look for them in the case studies that follow below:

1. The 9/11 issue is increasingly framed not as conspiracy theories versus hard science, but as a legitimate controversy resting on unanswered questions and a search for truth.
2. News reports and television programs examining these controversies have become longer and more balanced.
3. Major media outlets have begun to present the claims of the truth movement first, followed by counter-arguments from defenders of the official story.
4. Major media outlets have begun to include, and even to introduce, extensive evidence to support the claims of the 9/11 truth community.
5. The media treatments increasingly suggest the possibility of a re-investigation into the events of September 11, 2001.

The first part of this essay deals with the crucial scientific evidence that emerged in early 2009, the significance of this evidence in relation to the official story of 9/11, and the immediate news coverage it received.

II. Scientific Paper Finds Nano-thermite Explosives in World Trade Center Dust, April 3, 2009

A peer-reviewed paper published in the Open Chemical Physics Journal on April 3, 2009,² reported that a little known high-tech explosive called nano-thermite was found throughout the World Trade Center dust.

These physicists and chemists involved in this study discovered "distinctive red/gray chips in significant numbers"³ in four samples of dust collected from the area. The presence of aluminum and iron oxide in the red material provided one of the signs that it might be nano-thermite, which is a high explosive (whereas ordinary thermite is an incendiary.)

Another clue was provided when putting a flame to the chips produced an explosive reaction.

On the basis of these and other observations, the team concluded that "the red layer of the red/gray chips we have discovered in the WTC dust is active, unreacted thermitic material, incorporating nanotechnology, and is a highly energetic pyrotechnic or explosive material."⁴

The article's first-named author, Dr. Niels Harrit – a University of Copenhagen chemistry professor who specializes in nano-chemistry⁵ – explained on Danish TV2 News:

“Thermite itself dates back to 1893. It is a mixture of aluminum and rust-powder, which react to create intense heat. The reaction produces iron, heated to 2500 degrees Centigrade. This can be used to do welding. It can also be used to melt other iron.

“So in nano-thermite, this powder from 1893 is reduced to tiny particles, perfectly mixed. When these react, the intense heat develops much more quickly. Nano-thermite can be mixed with additives to give off intense heat, or serve as a very effective explosive. It contains more energy than dynamite, and can be used as rocket fuel.

“You cannot fudge this kind of science. We have found it: unreacted thermite.”⁶

What was the significance of this sophisticated material?

Reported Evidence that Nano-thermite is a Military Substance

In a German interview in May 2009, Dr. Harrit said: “There are no experts on nano-thermite without connections to the military.... This stuff has only been prepared under military contracts in the USA and probably in bigger allied countries. This is secret military research...It was not prepared in a cave in Afghanistan.”⁷

Chemist Kevin Ryan, another co-author, had reported in an earlier article that explosive nano-thermite, which may be painted onto surfaces, was developed by US government scientists at Lawrence Livermore National Laboratories.⁸

A United States Department of Defense special publication confirms that work on these “energetic materials” has long been “performed in laboratories within all military services.”⁹

According to a June 2009 statement by Britain's prestigious Institute of Nanotechnology,¹⁰ the Harrit study “provides indisputable evidence that a highly engineered explosive called nano-thermite was found in the dust of all three buildings that came down on 9/11 2001 in New York city. [sic] This advanced explosive incorporating nanotechnology is only available to sophisticated military labs.”¹¹

It thus became known by mid-2009 that explosives of military origin, probably in the United States, had been involved in the World Trade Center collapses.

Early Coverage of the Nano-thermite Finding in the European Mainstream Press

Although the new scientific evidence against the official story of 9/11 was not reported in the mainstream British or North American media, it did receive attention in continental Europe.

The day the article was published, a thorough essay in the Danish journal Videnskab (Science) examined both sides of the controversy about controlled demolition.¹²

The same issue of Videnskab also carried an interview with Professor Harrit, who answered pointed questions about the peer-review history of the article, and the military nature of

nano-thermite.13

The following day, Denmark's politiken.dk reported the scientific nano-thermite paper in an article called (in Danish) "Conspiracy theories about 9/11 get new life."¹⁴

Then, the day after Professor Harrit's April 6 interview Danish TV2 News, he was featured on the popular talk show, "Good Morning Denmark", on which he said:

"The material we found is super hi-tech frontline military research. It's not a mixture of random chemicals. It's an advanced material which is difficult to get information on. But some conference papers and internal reports have been published...There has to be a normal forensic investigation of this attempt. Our research is high-level forensic work. We have provided technical evidence that can be used in the future investigation."¹⁵

On April 13, an online Croatian political newspaper posted the Danish TV2 video interview with Harrit along with an article titled "VIDEO: 9/11 No Longer Taboo Topic in Denmark".¹⁶

Russia also took notice. On July 9, Laura Emmett, the London correspondent for RT, interviewed Dr. Niels Harrit for over 10 minutes. (RT, previously known as Russia Today, is a globally broadcast English-language channel sponsored by the state-owned news agency RIA Novosti. It reaches 1.5 million people monthly, including half a million Americans.) Stating that "the evidence for controlled demolition is overwhelming", Harrit reported that the nano-thermite reaction produced pools of molten iron beneath the rubble and inextinguishable fires that lasted for months.¹⁷

I turn now to ways that the mainstream news coverage of the case against the official story has changed since the appearance of the nano-thermite paper.

III. The Changing Mainstream Media Treatment of 9/11 Evidence from early 2009 to early 2010: 18 Case Studies

Two February 2009 news items illustrate the wary mainstream attitude towards conspiracy theorists early in the year. A New York Times article said about actor Daniel Sunjata:

The second episode of "Rescue Me's" fifth season, starting in April, may represent the first fictional presentation of 9/11 conspiracy theories by a mainstream media company...Mr. Sunjata's character delivers a two-minute monologue...describing a "neoconservative government effort" to control the world's oil, drastically increase military spending and "change the definition of pre-emptive attack."

Mr. Sunjata surprised some of the TV reporters when he said that he "absolutely, 100 percent" supports the assertion that "9/11 was an inside job."¹⁸

Fox News was somewhat less constrained, saying:

An upcoming episode of the drama "Rescue Me" is about 9/11 being an inside job. The actor who spews the theories on camera, Daniel Sunjata, actually believes in it too.

Look, the fact is, actors who barf this crap are doing it for their own egos. It makes them feel smart, because for once they're spouting something provocative instead of puerile. Never mind that it's an insidious insult to the victims of 9/11 – as it is to the rest of us, who may or may not be guilty, according to Sunjata's theory.¹⁹

However, things started to change after the appearance of the nano-thermite paper on April 3, as may be seen from the following case studies of media reports, each of which is identified as having corporate, public, or independent ownership.

The case studies reveal the evidence which has been introduced into public consciousness during the past year.

Case Study 1: The Dutch TV Mock Trial of Osama bin Laden, April 25, 2009

On April 8, 2009, a popular TV program called "Devil's Advocate" held a mock trial of Osama bin Laden with lawyers arguing before a politically balanced civil jury of five people.

The case against bin Laden was argued by two real-world opponents: former American correspondent Charles Groenhuijsen, and Dutch-American Glenn Schoen of a US security firm. Real-world lawyer Gerald Spong acted as bin Laden's defense attorney.²⁰

Spong presented new evidence from a videotape of Professor Emeritus of Islamic Studies Gernot Rotter, saying that the American translators who transcribed the bin Laden tapes of the November 9, 2001 "confession video" have "clearly added things in many places – things that are not there even when listening multiple times."²¹

Spong won. Although the jury found bin Laden to be a terrorist, it said there was no proof that he had ordered the 9/11 attacks.

Through this method, this program on AVRO – the Dutch public broadcasting organization – presented evidence, not previously seen in the major media, against the likelihood that bin Laden ordered the attacks.

On April 15, Fox News reported the Dutch jury findings in a long and unusually balanced article, in which former New York mayor Rudy Giuliani was quoted six times, saying that bin Laden's exoneration sent a "disturbing message" to the world and fueled conspiracy theories. Giuliani variously called this message "bizarre," "dangerous," "aberrational," "irrational," and "unfortunate."²²

However, referring to Spong as a "well-known yet controversial attorney," Fox mentioned him 10 times, and more substantively, reporting his evidence that the bin Laden videos seemed inauthentic, as well as his point that the FBI has not indicted bin Laden for the attacks.

Concluding Comment: (AVRO is publicly owned, but Fox News is corporate.) Neither of these two mainstream treatments of doubts about the official story was broadcast on the customary anniversary date, and both reached millions of people.

Case Study 2: Architect Richard Gage in Canada's "Financial Post", April 25, 2009

One of Canada's top four English-language newspapers, the conservative National Post,

publishes its business section as the Financial Post.

Three weeks after the nano-thermite story broke, Jonathan Kay, a National Post columnist and editor with degrees in both engineering and law, wrote an article about Richard Gage, the “lucid” San Francisco architect who heads up the 1,000-strong “Architects and Engineers for 9/11 Truth.”²³

Kay, who himself endorses the official story of 9/11, described Gage as a “respectable-looking middle-aged” architect, “complete with suit and tie, and receding hairline,” and reported that Gage’s organization “scored a booth at the upcoming American Institute of Architects conference from April 30 to May 2.”

In the midst of references to thermite reactions and iron-oxide-based explosives, Kay wrote of controlled demolitions:

“As radical as Gage’s theory may sound to readers, it’s surprisingly popular. The ‘9/11 Truth Movement’...has millions of adherents across the world. Many believe that the World Trade Center was destroyed on Sept. 11 through controlled demolition set in motion by officials within America’s own government and military.”

Gage’s presentation was also described as “effective”:

“In one particularly effective segment, he puts up shots of the localized fires that broke out in the lower floors of WTC Building 7 hours before it collapsed. Seconds later, he shows footage of Beijing’s Mandarin Oriental hotel – which suffered an epic top-to-bottom conflagration in 2009...and remained standing.”

Concluding Comment: (Corporate). Besides reporting Gage’s evidence without any attempted refutation, this corporate-press writer remarked that “no major media outlet has done a truly comprehensive profile or investigation of the Truther movement.” He thereby seemed to be suggesting that it is now time to take the 9/11 truth movement seriously.

Case Study 3: Norwegian State Radio’s Public Debate on 9/11 Truth, May 21, 2009

Professor Harrit, who was lecturing in Norway in late May 2009, was interviewed by public radio program “Here and Now”,²⁴ on NRK (the Norwegian Broadcasting Corporation).

Harrit presented the findings of the nano-thermite paper, which were then discussed by three Norwegian scientists who did not support his conclusions.

Following the radio program, an extended email debate continued between Dr. Ola Nilsen, who teaches chemistry at the University of Oslo, and Dr. Steven Jones, a co-author of the nano-thermite paper who formerly taught physics at Brigham Young University. This debate, during which Nilsen somewhat modified his original view, was posted to a Norwegian blogsite in English.²⁵

Concluding Comment: (Public). Although NRK in this April program challenged the findings of the Harrit paper, this was to change by late summer, as we shall see below.

Case Study 4: Architect Richard Gage on Fox News, May 28, 2009

The hosts of Fox News on KMPH in Fresno, California, began their 7-minute interview by saying, "He's an architect experienced in steel structures. Now Richard Gage is...here to show us why he's calling for a more thorough investigation into the collapse of the World Trade Center buildings."²⁶

These two anchors actively encouraged Gage's discussion of the ten key features of controlled demolition. He was allowed to explain the free-fall acceleration of WTC 7 (shown on his two video frames as dropping at the same rate as a second building felled by controlled demolition) and the "uncanny" failure of 40,000 tons of structural steel columns that were designed to resist its collapse.

Although normal office fires were said to have caused the collapses, he explained, various firefighters had reported large pools of molten iron at ground level.

"What produced all that molten iron?" he asked.

The answer, he said, was found in the inches of dust covering lower Manhattan. "The by-product of thermite is molten iron and it's dispersed throughout all this dust...and there are small chips of unignited thermite as well. This is very high-tech thermite - nano-thermite. It's not found in a cave in Afghanistan; it's produced in very sophisticated defense department contracting laboratories...[its] particles are one-thousand times smaller than a human hair."

Asked whether bin Laden might have had access to the buildings, Gage said probably not - that someone else who had access to nano-thermite, and to the buildings' security systems, would need to be investigated. Someone who had access to the elevator modernization, which was going on nine months earlier and was "immediately adjacent to the core columns and beams in the building."

Concluding Comment: (Corporate). This Fox News show began by asking Gage about his credentials, saying "We ask that for clarification so that as we get into this, we want people to make sure that you're not just someone with a wacky idea...you come with some science to you." The program ended with a sincere thank-you to Gage for "opening up a lot to think about," and an announcement that there is "a great deal of information" on the KMPH.com website. In short, Gage was treated with the respect due to any serious participant in an important and controversial issue.

The next major mainstream event was the Russia Today program of July 9, 2009, which was covered above, so we will move directly to the anniversary period of September 2009, when further evidence of the impact of the nano-thermite discovery became apparent.

Case Study 5: The National Geographic Documentary, "9/11: Science and Conspiracy", August 31, 2009

In late August, 2009, the National Geographic Channel (NGC) aired a two-hour documentary, "9/11: Science and Conspiracy," which sought to answer several questions, "What caused the collapse of the Twin Towers? Was it from the fires, or were explosives placed inside the buildings, causing them to implode? Did a missile, rather than a commercial airline jet, strike the Pentagon?"²⁷

This "NatGeo" program purported to explore evidence about controlled demolition presented by the 9/11 truth movement. It interviewed Dylan Avery (the maker of the "Loose

Change” films), Richard Gage, David Ray Griffin, and Steven Jones. But in reality this NatGeo program was entirely devoted to debunking their claims by using pseudo-scientific demonstrations to refute claims that none of these men have made.

For example, in order to refute the claim that nano-thermite could have brought down the buildings, NatGeo used ordinary thermite (with the narrator explaining that they had no access to nano-thermite). Moreover, instead of using the thermite to make shaped charges, which can cut through steel, the NatGeo experimenter simply placed a bag of thermite next to a steel column and lit it. When the burning thermite (entirely predictably) did not melt the column, the narrator concluded, triumphantly, that science had disproved the claim of the conspiracy theorists.

A review in Media Life Magazine, while not fully exposing the phoniness of the program’s claim to represent “science,” did point out some shortcomings, saying:

Some of the issues raised by the truthers, however, aren’t addressed, or are addressed in brief asides. This leaves this documentary open to charges of picking and choosing which points to cover. “9/11: Science and Conspiracy” spends too much time discussing the psychology behind conspiracy theories – which isn’t really a hard science.²⁸

A review in the New York Post quoted Sander Hicks, a journalist who is openly a member of the 9/11 truth community, as saying that its representatives on the program “come off as careful and professional, unemotional, but passionate about the truth,” and that the program, in spite of its faults, shows “that the topic is still relevant and that the case isn’t closed.”²⁹

Concluding Comment: (Corporate). This program by National Geographic provides a good reminder of how the 9/11 truth issue has generally been handled by the corporately-controlled media. But it also demonstrates the fact that the controversy is very much alive in the major media.

Case Study 6: Germany’s Weekly TV Guide, “TV Hören und Sehen,” August 31, 2009

“TV Hören und Sehen”, with a paid circulation of nearly a million copies, is owned by the Bauer Media Group, which publishes 308 magazines in 14 countries. The TV magazine features interviews and articles by prominent German authors.³⁰

It is therefore significant that on August 31, 2009, this magazine published “Die Geheimakten von 9/11” (“The Secret Files of 9/11”) as a full double-page spread, continuing with photos on two subsequent pages. It opened by saying: “9/11 is officially the largest criminal case in history – but classified documents and witness accounts are surfacing, that speak against the official versions of the CIA and Pentagon.”³¹

It then asks what force could pulverize 200,000 tons of steel in 11.4 seconds, quoting US engineer Neel Ginson: “In order to bring down this kind of mass in such a short period of time, the material must have been artificially exploded outwards.” Ginson added that, looking closely, one can see small explosions in the Twin Towers always occurring before the floors are reached by the collapse line. The fact that the towers were the first steel-frame buildings in the world to collapse because of fire, he added, was even admitted by NIST (the National Institute of Science and Technology, the government agency that

produced the official reports).

Among many other questions, the article raises the issue of adjacent World Trade Center 7, the 47-storey steel-frame building with a base the size of a football field that collapsed at 5:20 PM the same day: "But the official 9/11 investigation never mentions the building once."

With reference to the Pentagon, this article asks: How were the victims identified by their fingerprints, when even the airplane steel had melted?

Concluding Comment: (Corporate). Although this article does not specifically mention nano-thermite, it clearly suggests that artificial explosions brought down the buildings. By not defending the official story at all, this large-chain corporate media outlet was among the first to give an open hearing to the independent 9/11 research community.

Case Study 7: Two California Newspapers Review the Role of Architects and Engineers for 9/11 Truth, September 2009

In September 2009, Metroactive (Silicon Valley's number-one weekly magazine) and the Santa Barbara Independent, each published slightly different versions of a long article on the controversy surrounding the WTC building collapses.³²

The Independent article - entitled "Twin Towers, Twin Myths?" - begins:

"One of the crucial technical disputes in American history, perhaps second only to global warming, is underway. It pits hundreds of government technicians who say the World Trade Center buildings were brought down by airplane impact against hundreds of professional architects and building engineers who insist that the Twin Towers could never have collapsed solely due to the planes and are calling for a new independent investigation. It is a fight that is not going away and is likely to get louder as more building trade professionals sign on to one side or the other."³³

The version in MetroActive - called "Explosive Theory" - says "[E]ight years after 9/11, a growing organization of building trades professionals suspect that there was more to the event than the government will admit." It then gives a short history of Gage's now 1,000-strong organization, Architects and Engineers for 9/11 Truth (AE).³⁴

Deputy Director Michael J. Heimbach of the FBI's counter-terrorism division, this article adds, had recently acknowledged in a letter to the organization that Gage's presentation is "backed by thorough research and analysis."

One local AE member was quoted as saying "it takes too much energy" - energy that was not there - to collapse the buildings at free-fall speed, given the resistance that steel offers. This was borne out, this member continued, by a team of scientists "working at technical laboratories in the United States and Denmark [who] reported in April that analysis of dust ...gathered at the World Trade Center found evidence of the potent incendiary/explosive 'super thermite,' used by the military."

Almost half of this article deals with the controversy over whether nano-thermite was used, with most of the space allotted to evidence supplied by the 9/11 Truth Movement. Near the end, however, spokesman Michael Newman is brought in to defend NIST's research, saying

there was “no need” to test the dust for thermite.

But the last word was given to engineer Ed Muniak of AE, who said:

“The fact is that the collapses don’t resemble any fire-induced behavior of structures, but it exactly mimics a controlled demolition, so why not investigate that? It’s all very suspicious and that’s why an independent investigation is needed so we can all learn from this.”

“Explosive Theory” also focuses pointedly on the growing number of professional organizations and retired officials calling for a new investigation, including:

...two dozen retired U.S. military brass and eight former U.S. State Department officials, along with a number of Republicans who have served in high federal positions since President Reagan, including former Assistant Treasury Secretary Paul Craig Roberts and former Reagan administration Assistant Defense Secretary (and retired Marine Corps colonel) Ronald D. Ray.

The version in the Santa Barbara Independent concludes with an unusually candid observation:

And how would America deal with such an investigation against the backdrop of suppositions that some officials in government were complicit? This idea is virtually unthinkable to most of the public, much less something the American political system can handle...The forces of denial, in the system and in most of our minds, are innately powerful and probably sufficient to mitigate against a reopened investigation. Despite this, [Richard] Gage [of AE] sees his role as provoking a better investigation.

Concluding Comment: (Independent). The authors of this article, rather than referring to “conspiracy theorists,” present the 9/11 issue as a “technical dispute” of historic importance. Both versions of the article represent a 180-degree turnaround in American newspaper reporting, providing a useful introduction to the long-ignored research by independent professionals. The Santa Barbara Independent, curious about public opinion rather than seeking to hide it, published a local poll asking if conspiracy was behind the collapses: 75% of respondents answered “yes”.³⁵

Case Study 8: Dr. Niels Harrit on NRK1’s “Schrödinger’s Cat,” September 10, 2009

NRK1 is the Norwegian Broadcasting Corporation’s main TV channel. It’s program “Schrödinger’s Cat”, which is about scientific research and technology, comes on every Thursday following the evening news. It has won several awards, and averages 487,000 viewers.

For the September 10 program, Dr. Harrit was interviewed for about ten minutes in his office and laboratory at the University of Copenhagen Nano-Science Center, where he demonstrated the magnetic quality of a WTC dust sample. He also showed videotape of molten iron flowing from the upper South Tower, which was iron, not aluminum (which melts at a much lower temperature than steel or iron). Emphasizing that an office fire, even if fed

by jet fuel, could not possibly get hot enough to melt steel, thereby producing iron, he concluded that the flowing iron had to have been caused by something such as nano-thermite, which produces “an enormous amount of heat”, and molten iron is created in the process, with a temperature of 4530 F.³⁶

Although Harrit did not know who placed the explosives, he said, he had no doubt that a crime had occurred.

In the final third of the program, three other people were asked for comments. Two of the people tried to cast doubt on Harrit’s conclusions, but their comments were weak, even absurd. An architect argued that the energy from the airliners brought the Twin Towers down and then Building 7 came down because the collapse of the towers acted like an earthquake to weaken the ground. American buildings are weak, he explained, because they don’t use reinforced concrete.

Finally, Dr. David Ray Griffin has stated that “for scientists and people who study the facts, the official story about the Twin Towers is completely ludicrous, but for the general public it has seemed plausible. Jet fuel fires – they seem so hot. Jet fuel’s just kerosene.”

Concluding Comment: (Public). This prime-time coverage by Norway’s largest TV channel was quite a turnaround from the earlier NRK radio coverage in May. Most of the time was given to Drs. Harrit and Griffin; the content was groundbreaking; and the opposing views were obviously insubstantial. Considering Norway’s NATO membership and military participation in the US-led operations in Afghanistan, the program could prove to be significant.

Case Study 9 : London’s “Daily Mail” asks whether Osama bin Laden is Dead, September 11, 2009

This long and detailed article opens with the menacing bin Laden audiotape of June 3, 2009, timed to coincide with Barack Obama’s arrival on his Middle East tour, and then moves to the new Anglo-American offensive to “hunt and kill” the al Qaeda leader.

But, the Daily Mail asks, what if bin Laden isn’t alive?

What if everything we have seen or heard of him on video and audio tapes since the early days after 9/11 is a fake – and that he is being kept ‘alive’ by the Western allies to stir up support for the war on terror?

Incredibly, this is the breathtaking theory that is gaining credence among political commentators, respected academics and even terror experts.³⁷

Professors Angelo Codevilla of Boston University and Bruce Lawrence of Duke University point out that the early, verifiable videotapes of bin Laden do not match the tapes that have emerged since 2002 – and even one in late 2001.

Telltale distinguishing features include a changed facial structure and increasing secularism in the content of the messages.

The article then presents the findings of Dr. Griffin’s book on the topic – Osama bin Laden: Dead or Alive? – as “provoking shock waves”.

This book presents evidence that bin Laden died, probably due to kidney failure, in mid-December 2001, which would mean that his taped messages since then have been faked to “stoke up waning support for the war on terror in Iraq and Afghanistan.”

Perhaps the most controversial of all the tapes was released by the Pentagon on December 13, 2001, claiming that it had been found in a home in Jalalabad. Prior to this tape, bin Laden had, while praising the 9/11 attacks, consistently denied responsibility for them. But the bin Laden of this tape boasts about having planned them.

President Bush, the Blair Government, and the mainstream media all hailed this message as offering conclusive proof of bin Laden’s guilt.

The Daily Mail, however, points to various reasons provided in Griffin’s book to believe that the man in this video was an imposter. It refers to the existence of a “highly sophisticated, special effects film technology to morph together images and vocal recordings.”

And it quotes Griffin as saying: “The confession tape came exactly when Bush and Blair had failed to prove Bin Laden’s responsibility for 9/11 and both men were trying to win international public support, particularly in the Islamic world, for the anti-terrorist campaign.”

Far from seeking to ridicule Griffin’s book, the Daily Mail concluded thus: “[T]he Bin Laden tapes have emerged with clockwork regularity as billions have been spent and much blood spilt on the hunt for him. Bin Laden has been the central plank of the West’s ‘war on terror’. Could it be that, for years, he’s just been smoke and mirrors?”

Concluding Comment: (Corporate). This 2400-word article is the first serious mainstream coverage the evidence that Osama bin Laden is dead – and has been for many years.

Case Study 10. The New Statesman announces Dr. David Ray Griffin as No. 41 in “The Fifty People who Matter Today,” September 24, 2009

Two weeks after the Daily Mail article, a second corporate British publication put Griffin in 41st place in a list of people who “matter today.”³⁸

Because this article was discussed in my earlier paper, Part I of this series, it is mentioned here only as a significant milepost, one that gave (grudging) recognition to the fact that the movement challenging the official account of 9/11 can no longer be ignored.

Its impact on the media is shown by the fact that the New Statesman placed Dr. Griffin (who scores 200,000 results when googled) above Venezuela’s President, Hugo Chavez, (who scores over 11 million results) on its list of influential people.

Concluding Comment: (Corporate). Although the New Statesman called the movement represented by Dr. Griffin “pernicious”, its evaluation of his importance represents a point of no return in the media coverage of 9/11 – as we shall see.

Case Study 11: Jean-Marie Bigard on France 2 Public Television, October 28, 2009

Back in September 2008, Jean-Marie Bigard, France’s most popular stand-up comedian, was led to apologize for claiming 9/11 was orchestrated by the US government.³⁹ But by July 2009, Bigard had started to post humorous videos on his website ridiculing the official

account of the September 11 attacks.

In October 2009, Bigard and award-winning French filmmaker Mathieu Kassovitz appeared for an hour in a debate on France 2, the publicly owned French national television channel.⁴⁰

The hosts, who had refused to include the scientist who was originally supposed to be on the show (Dr. Niels Harrit) attempted to center the debate on “straw man” theories that neither Bigard nor Kassovitz held. This led to arguments, which then allowed Le Figaro, France’s second largest newspaper, to dismiss the debate as “noisy sophistry”.⁴¹

Concluding Comment: (Public). Although this program was aimed at debunking the 9/11 movement, as shown by its refusal to include a scientist, the fact that it was aired on this state-owned network was a breakthrough, ending the era in which 9/11 questioning was ignored in France.

Case Study 12: “The Unofficial Story”, by CBC’s The Fifth Estate, November 27, 2009

On November 26, 2009, Canada’s largest newspaper, The Globe and Mail, noting in an objective review⁴² that the 9/11 truth movement is “gathering steam,” reported that a documentary airing that evening “follows up on some fairly startling public-opinion polls of late.”

It was referring to “The Unofficial Story”,⁴³ a program in the Canadian Broadcasting Corporation’s weekly award-winning investigative series, The Fifth Estate.⁴⁴

Host Bob McKeown, himself a recipient of multiple awards⁴⁵, opened by saying that eight years after the “most scrutinized day in history”, there may be “more questions than ever”, and that an increasing number of people now believe the US government was behind the 9/11 attacks. “Incredibly”, he adds, “public opinion polls now show that a majority of Americans believe the Bush Administration had advance knowledge of those attacks, and one way or another allowed them to happen, and polls show that one Canadian in three believes that, too.”

“The Unofficial Story” then allows leading members of the 9/11 truth community to present a spectrum of evidence on various issues:

Architect Richard Gage on how the towers were brought down by controlled demolition

Canadian scientist A.K. Dewdney on the impossibility of cell phone calls at high altitude

David Ray Griffin on the FBI’s 2006 admission that, although US Solicitor General Ted Olson had reported receiving two calls from his wife, CNN commentator Barbara Olson on Flight 77, the evidence indicates that she attempted only one call and that it was “unconnected” and hence lasted “zero seconds”

Dr. Griffin and Canadian media commentator Barrie Zwicker on the military’s explanation of why it did not intercept the airliners

9/11 documentary filmmaker Craig Ranke on the fact that footage of the Pentagon attack is virtually unavailable to the public in spite of many cameras

trained on the building

Dewdney on evidence that Flight 93 was shot down by the US military

Richard Gage on the presence of nano-thermite in the World Trade Center dust

In response, defenders of the official account, such as Johnathan Kay (of Canada's National Post) and 9/11 Commission counsel John Farmer, focus more on why the American public is susceptible to conspiracy theories, than on the disputed evidence itself 46 – although Kay does credit Richard Gage for being involved in a serious quest for truth.

Jim Meigs, Editor-in-Chief of Popular Mechanics, also directs comments against the skeptics themselves rather than their evidence. Conspiracy theorists, he says, are deluded by “the myth of hyper-competence” in relation to the failure of the US Air Force to intercept the planes.

However, Brent Blanchard, presented as a demolition expert, argues against the controlled demolition theory by producing seismographs showing the absence of spikes that, he says, would have been produced by explosions.

He also expressed concern that people around the world, by reporting US government complicity in 9/11 “as fact”, are affecting how people view America.

But actor Daniel Sunjata (of “Rescue Me”) ponders the price of not asking the hard questions: “Sometimes boils need to be lanced. Sometimes poison needs to be brought to the surface in order for real healing to take place.”

McKeown concludes: “We did it not to promote one side or the other, but to shine some light on some of those unresolved issues and unanswered questions.”

And indeed, the program website published links to both sides of the issue.⁴⁷

Concluding Comment: (Public). This hour-long documentary was the first truly fair opportunity in North America for advocates of the “unofficial story” of 9/11 to present some of their case on mainstream television. Representatives of the “official story” were also given time to speak, but their case was patently weaker. This imbalance was allowed by the producers, and indeed by the Canadian government, to stand. Aired several times across Canada, this program drew unusually high viewer commentary.

Case Study 13: New Zealand TV's “Close Up” hosts Architect Richard Gage, November 27, 2009

The same day “The Unofficial Story” was broadcast by the CBC, Richard Gage appeared on New Zealand TV's popular public affairs program, Close-Up, for a six-minute interview.⁴⁸

“WTC 7 was never hit by a plane but it still came down,” the host begins, “and that's what troubles internationally respected architect Richard Gage.”

Gage is then allowed to explain that the building fell straight down in 6.5 seconds, and that NIST, the agency tasked with explaining the collapse, admitted that it had come down in absolute free-fall for the first hundred feet or so. “That means the structure had to have been removed,” says Gage. “There is evidence of very high-tech explosives in all the dust

throughout lower Manhattan - nanothermite.”

Normal office fires, Gage added, would start “a large, gradual deformation - the building would tip over - it wouldn’t go straight down through the path of greatest resistance.”

This is why 1,000 engineers and architects around the world are demanding a real investigation that includes all of the evidence at the crime scene, not just the planes and the fires, says Gage.

“In the nine months prior to 9/11, we had the largest elevator modernization in history going on inside the towers...We’re looking for an investigation that includes elevator companies, security companies, etcetera.”

Concluding Comment: (Public). New Zealand’s national television station allowed open and unopposed discussion, by the founder of the world’s largest professional organization calling for a new 9/11 investigation, of the claim that nano-thermite was used in a controlled demolition of the World Trade Center. The coincidence that this program and the CBC’s “The Unofficial Story” both aired on the same day may prove to be a turning point in media coverage of the 9/11 issue.

Case Study 14 : “9/11 Conspiracy Theory with Jesse Ventura,” TruTV, Premiere December 9, 2009

TruTV is an American cable television network owned by Time Warner through its subsidiary, Turner Broadcasting. Historically, its has given live homicide trial coverage and other criminal justice programming, though it has recently expanded into more caught-on-video reality, which it calls “actuality” television.

“Conspiracy Theory with Jesse Ventura” premiered December 2, 2009, to an audience of 1.6 million television viewers.

The former Governor of Minnesota has good cause to look into conspiracies, as seen in his December 29 episode, which shows personal experience that the “secret state” holds more power than the senior elected representatives of the people:

“About a month after I was elected governor, I was requested into the basement of the capitol to be interviewed by 23 members of the Central Intelligence Agency, the CIA...And I said to them, “look before I answer any of your questions, I want to know what you’re doing here.” Because in the CIA mission statement it says that they’re not to be operational inside the United States of America. Well, they wouldn’t really give me an answer on that. And then I said, “I want to go around the room, and I want each one of you to tell me your name and what you do.” Half of them wouldn’t. Now isn’t that bizarre? I’m the governor, and these guys won’t even answer questions from me.”⁴⁹

Ventura made the 9/11 documentary after being approached by Donna March O’Connor, whose daughter died in the World Trade Center and wanted “every American exposed to the questions” about 9/11.⁵⁰

Ventura’s documentary contained interviews with the following people:

Janitor William Rodriguez, the last man out of the North Tower and who was

decorated for heroism by President Bush, who reported enormous explosions in the basements just before the plane hit up above, and whose testimony to the 9/11 Commission was ignored

Physicist Steven Jones, formerly of Brigham Young University, who isolated super-thermite from the enormous dust clouds of the Twin Towers and Building 7, after which he was contacted by a consultant engineer from the Department of Homeland Security, who warned Jones that, if he published his findings “the pain would be great.”

Explosives expert Van Romero, of the New Mexico Institute of Mining and Technology, demonstrating how super-thermite can be painted onto a steel beam, causing it to burn through

Ground Zero rescue worker Mike Mallone, who reported seeing one of the four black boxes removed from the site, and was told of two others – and who was told by the FBI that if he talked about it, “there would be a problem.”

Investigative journalist Dave Lindorff, who was told “off the record” by a contact in the National Transportation Safety Board, which investigated the boxes, that all four had been recovered by the FBI and taken away, though officially, the contact said, this would be denied

Air crash investigator Dale Leppard, who said that the bright orange heat-resistant boxes are never lost

Yet the 9/11 Commission Report claimed that the boxes from American 11 and United 175 were never found.

Ventura concluded by asking: “If everything they told us was true, then why would they need to stonewall us?”

Concluding Comment: (Corporate). By calling his series “Conspiracy Theory with Jesse Ventura”, he openly declares that conspiracies do exist, and that they are a legitimate subject to investigate. According to TruTV, the first episode drew 1.6 million viewers, a record for a new series on this network.

Case Study 15: German Federal Judge Dieter Deiseroth Questions the Official 9/11 Investigation, December 15, 2009

Heinz Heise is a German publishing house, which publishes Europe’s most popular computer and technology journals. It also owns Heise Online (heise.de), which is a top-50 site in Germany, and a top-1000 website in the world as a whole.

On December 15 2008, Heise Online carried an interview with German Federal Judge Dieter Deiseroth on the legality of the Afghanistan war and the question of whether the attacks were adequately investigated in the US.⁵¹

In his response, Deiseroth made the following points:

The 9/11 Commission consisted of Bush Administration officials who were very close to the military industrial complex.

Now, over eight years after 9/11, no independent court has applied legal procedures to review the available evidence on who was responsible for the

attacks.

It is not acceptable for a constitutional state to dispense with the necessary steps in identifying suspects and instead to declare war, bomb a foreign country where suspects reside, and place it under military occupation.

Having made the claim that bin Laden was responsible for the terrorism of 9/11, the United States was under burden of proof, and yet America's own FBI admits that it has no evidence presented in court of Osama bin Laden's responsibility for the 9/11 attacks.

Concluding Comment: (Corporate). This "top-50" online journal exposed many German people to the illegal and unconstitutional responses to the 9/11 attacks - which were the underpinning for the subsequent wars in Afghanistan and Iraq - and even to questions about the truth of the official account of 9/11 itself.

Case Study 16: Germany's "Focus Money" says: "We Do Not Believe You!" January 8, 2010

With 450,000 to 720,000 readers, Focus Money is the second most popular German weekly business magazine. In January 2010, it published a 5-page, highly detailed, and comprehensively researched glossy feature, "We do not believe you!"⁵²

The article first looks at the many professional 9/11 groups, as well as a 2,000-strong list of prominent and qualified people who question the 9/11 Commission Report at the Patriots Question 9/11 website.

It quotes Richard Gage saying: "The towers accelerated without interruption in free fall...as if the lower 90 floors of the building did not exist. The only way to bring them down like that is controlled demolition."

The article weighs Gage's list of ten features of a controlled demolition, which were exemplified in the World Trade Center collapses, against the three features of a fire-caused destruction, which were absent.

Focus Money also explores the case of Barry Jennings, a former Deputy Director of Emergency Services in New York's Housing Authority, who reported being trapped in WTC 7 after massive explosions in this building occurred in the morning - before the Twin Towers fell. Focus Money also reported that Jennings, aged 53, died mysteriously just days before NIST's report on WTC-7 was to be released in August 2008.

The article recommends films that challenge the official report, including "Loose Change", which has been seen 125 million times on Google video alone, "9/11 Mysteries," and "Zero" - all available online.

Regarding the Pentagon, experienced commercial pilots are cited as maintaining that no one, let alone a Cessna pilot, could fly the route that Flight 77 allegedly took to hit the building.

The article pointed out the lack of debris to support the official story: "There was no tail, there were no wings, no confirmation of the crash of a Boeing 757." And there were no titanium engines, which would have survived the crash.

Also cited was Sergeant Lauro Chavez of the US Central Command in Florida, who was

involved in exercises the morning of 9/11 to hijack planes and fly them into the World Trade Center, the Pentagon and the White House. He asks why, when it became clear that the attacks were real, were the rogue planes not intercepted?

Secretary of Transportation Norman Mineta's testimony to the 9/11 Commission, in which he reported a conversation between Dick Cheney and a young officer prior to the strike on the Pentagon, supports Chavez' conviction that there had been a stand-down order.

Concluding Comment: (Corporate). This 5,400-word article presented strong evidence against the official 9/11 account to Germany's economic and political decision-makers.

Case Study 17: Televised documentary, "The BBC's Conspiracy Files: Osama bin Laden - Dead or Alive?" January 10, 2010

In January 2010, a BBC News article⁵³ summarized evidence supporting both sides of the question stated in the title of its upcoming documentary, "Osama bin Laden - Dead or Alive?" - a title taken from the David Ray Griffin book that was previously discussed in a Daily Mail article.⁵⁴

The documentary, which was part of the BBC Conspiracy Files series, opened by presenting evidence that bin Laden has long been dead, including the following points:

Bruce Riedel, chair of President Obama's policy review on Afghanistan and Pakistan, says the bin Laden trail is cold, "frozen over," meaning that there has been no intelligence on bin Laden since Tora Bora, either by sightings or intercepted communications.

Various lines of evidence suggest that bin Laden was suffering from advanced kidney disease: CBS News reported, for example, that he was being treated in the kidney ward of a hospital in Pakistan the night before the 9/11 attacks, and the last of the undoubtedly authentic videotapes showed him frail and gaunt, with a whitish beard.

There were reports of his funeral in mid-December 2001 in Pakistani and Egyptian newspapers.

Former CIA agent Robert Baer, who believes bin Laden to be dead, reported that none of his friends in the CIA could state for certain that bin Laden was still alive.

Colonel Iman, Pakistan's former troop trainer, also believes him to be dead.

The only proof of bin Laden's continuing existence is the audio and videotapes, and Dr. Griffin has presented evidence (about the structure of bin Laden's face and hands, and the secular content of his messages) that some of them are clearly faked, leading to the suspicion that they all are.

Pakistan's former Lieutenant General Hamid Gul, who knew bin Laden, supports this conclusion with regard to the alleged confession video.

Professor Bruce Lawrence of Duke University, a student of the bin Laden tapes, also declared it a fake, especially because bin Laden always loved the spotlight. He asks why bin Laden has been seen so infrequently on video and why his contemporary, Ayman al-Zawahiri is seen so often.⁵⁵

The BBC narrator says that only six of bin Laden's 40 messages were

videotapes, and only two have appeared since Tora Bora in 2001.

Dr Griffin says the first video appeared conveniently just before the 2004 US election, which helped Bush to win; and the second appeared in 2007, showing a very black beard, which had formerly been almost white.⁵⁶

CIA agent Robert Baer confirmed that the alleged bin Laden audio and video tapes could have been faked through digital manipulation.

The BBC program also presented evidence that is believed by some to show that the US may not have been intent on capturing or killing bin Laden:

Dalton Fury, commander of the secret Delta Force, says it was “odd” that Washington denied him nearby troops and artillery when he had bin Laden trapped at Tora Bora in December 2001.

Mike Scheuer, formerly of the CIA bin Laden Unit, said the US had ten chances to easily kill bin Laden between May 1998 and May 1999. Each time the CIA briefed the White House of the opportunity, the decision was made not to shoot.

In the final third of the program, the BBC provided rather weak evidence against “the theory that Osama bin Laden died 8 years ago and the US government is keeping him alive, faking videos, and sending troops to battle and allowing them to die in pursuit of an imaginary foe.” However, a reviewer for the TV and Radio section of the *The Independent*, one of London’s leading newspapers, complained that this rebuttal was too little, too late, saying:

“The Conspiracy Files film about Osama Bin Laden was a dubious affair, which gave regrettable amounts of air time to an obsessive 9/11 “truther” called David Ray Griffin. . . . Griffin only got the airtime, as it turned out, so that Conspiracy Files could systematically work their way through his claims and dismiss them. But I think they grievously overestimated the capacity of common sense to mop up the pollution of paranoid fantasy that they actively helped to spread around in the first 45 minutes of the film.”⁵⁷

This seemed to be the commentator’s way of saying that the BBC’s show probably increased the number of people who believe that bin Laden is probably dead.

Concluding Comment: (Public). This program attempts to neutralize the evidence that bin Laden has been dead for 8 years, which if true would mean that fabricated tapes are helping to justify a continuing Western offensive in the Middle East. That the program was made at all shows how seriously the BBC is taking the growing challenge to the official story of 9/11.

Case Study 18 : An American Union Paper Calls for a New Probe, February 1, 2010

The New Hampshire Union Leader is a daily union newspaper seen by 143,000 people per month in the United States.

Beth Lamontagne Hall of the Union Leader wrote in February 2010 that “Keene resident Gerhard Bedding doesn’t buy the government’s version of what happened on Sept. 11, 2001, so he’s working on a statewide campaign calling for another investigation into the terrorist attacks.⁵⁸

Bedding and others, she reported, are petitioning New Hampshire's congressional delegates to push for an independent investigation into "all the evidence and unanswered questions" pertaining to the 9/11 attacks.

Quoting Bedding's statement that a new investigation is needed "in light of new evidence that has appeared in the last two years," she pointed out that he mentioned, in particular, the report that scientists had found traces of explosives at the World Trade Center.

Concluding Comment: (Independent). This article in a daily union newspaper is a significant indicator, more than eight years after the attacks, of the broadening concern over the truth about 9/11, and is another example of the widespread influence of the nano-thermite paper published by Dr. Harrit and his co-authors.

IV. Summary and Concluding Observations

1. In the past year, in response to emerging independent science on the 9/11 attacks, nine corporate, seven public, and two independent media outlets aired examinations of the issue, which were all - with the exception of the National Geographic special - reasonably objective, examining the issue as a legitimate scientific controversy worthy of debate (not as "conspiracy theorists" vs. science and common sense).
2. Eight countries - Britain, Canada, Denmark, France, the Netherlands, New Zealand, Norway, and Russia - have allowed their publicly-owned broadcasting stations to air the full spectrum of evidence challenging the truth of the official account of 9/11.
3. These developments may reflect a relaxation in the international media following the change in the US and British leaderships.
4. These developments definitely reflect, in any case, the fact that scientists in the 9/11 Truth Movement have recently succeeded in getting papers, such as the nano-thermite paper, published in peer-reviewed journals.
5. These developments surely also reflect the general professionalism of the 9/11 Truth Movement, as exemplified by the emergence of not only Architects and Engineers for 9/11 Truth but also Firefighters, Intelligence Officers, Lawyers, Medical Professionals, Pilots, Political Leaders, Religious Leaders, Scholars, and Veterans for 9/11 Truth.
6. These developments seem to reflect, moreover, an increased recognition of the importance of the 9/11 Truth Movement, which is demonstrated by two honors given to its most influential member, Dr. David Ray Griffin, that would have been unthinkable only a few years ago: the choice by Publishers Weekly of one of his books as a "Pick of the Week," and his inclusion in the New Statesman's list of the most important people in the world today.

This more open approach taken in the international media - I could also have included the Japanese media - might be a sign that worldwide public and corporate media organizations are positioning themselves, and preparing their audiences, for a possible revelation of the truth of the claim that forces within the US government were complicit in the attacks - a revelation that would call into question the publicly given rationale for the military operations in Iraq, Afghanistan, and Pakistan.

The evidence now being explored in the international media may pave the way for the US

media to take an in-depth look at the implications of what is now known about 9/11, and to re-examine the country's foreign and domestic policies in the light of this knowledge.

Elizabeth Woodworth is a retired professional health sciences librarian, and a freelance writer. She is the author of two published books and many articles on political and social justice issues.

Erratum:

RIA Novosti, the Russian state-owned news agency, has advised in an a formal statement of February 4, 2010, that:

“RIA Novosti, Russia’s leading multimedia news agency is neither a “sponsor” nor a “backer” of Russia Today, an English language satellite TV channel, contrary to recent claims in media reports.” Ref: “RIA Novosti neither ‘sponsor’ nor ‘backer’ of Russia Today - Statement” (<http://en.rian.ru/russia/20100204/157770469.html>)

This means that seven — not eight — countries have “allowed their publicly-owned broadcasting stations to air the full spectrum of evidence challenging the truth of the official account of 9/11.”

37 Sue Reid, "Has Osama Bin Laden been dead for seven years - and are the U.S. and Britain covering it up to continue war on terror?" Daily Mail, September 11, 2009 (<http://www.dailymail.co.uk/news/article-1212851/Has-Osama-Bin-Laden-dead-seven-years-U-S-Britain-covering-continue-war-terror.html>)

38 New Statesman, "The 50 People who Matter Today."

39 "French comedian apologises for claiming 9/11 was orchestrated by the US government," Belfast Telegraph, September 10, 2008 (<http://www.belfasttelegraph.co.uk/news/world-news/french-comedian-apologises-for-claiming-911-was-orchestrated-by-the-us-government-13968453.html>)

40 "L'objet du scandale, 11 septembre, Bigard, Kassovitz," <http://www.youtube.com/watch?v=1uc4Mb9rF0c> The program is also available with English subtitles, at <http://world911truth.org/911-debate-with-kassovitz-and-bigard/> . The debate was originally intended to include journalist Éric Laurent and Prof. Niels Harrit, but apparently France 2 could not find anyone to debate them. See "France 2 backs away from real debate, censors Niels Harrit and Éric Laurent," October 24, 2009, <http://world911truth.org/france-2-backs-away-from-real-debate-censors-niels-harrit-and-eric-laurent/> .

41 Hervé de Saint Hilaire, «L'objet du scandale» : sophismes bruyants, Le Figaro, 30 octobre 2009 (<http://www.lefigaro.fr/programmes-tele/2009/10/30/03012-20091030ARTFIG00348-l-objet-d-u-scandale-sophismes-bruyants-.php>)

42 Andrew Ryan, "Was 9/11 a conspiracy? 'Truthers' make their case: CBC's fifth estate airs The Unofficial Story," The Globe and Mail, November 26, 2009

(<http://www.theglobeandmail.com/news/arts/was-911-a-conspiracy-truthers-make-their-case/article1378976/>)

43 CBC. The Fifth Estate. "The Unofficial Story", November 27, 2009 (http://www.cbc.ca/fifth/2009-2010/the_unofficial_story/)

44 The Fifth Estate has won 243 awards, including an Oscar for best documentary, three

international Emmy Awards, and 31 Geminis.

45 McKeown's awards include two Emmys, two Geminis, two Edward R. Murrow awards, two Gracies, two National Headliner awards and a National Press Club award. (http://en.wikipedia.org/wiki/Bob_McKeown)

46 It is worth noting that attempts to derail critics of the official story have often framed the issue as "conspiracy theorists" vs. "the science" or vs. "the facts." But as the current essay illustrates, the debate is now increasingly being framed in the media as science on one side of the issue vs. science on the other side.
