

Top Researchers Sound Alarm Over Heart Damage Surge in COVID-Vaccinated Children

By [Frank Bergman](#) and [Dr. William Makis](#)

A team of leading emergency pediatric medicine researchers is sounding the alarm over surging cases of heart damage in children who received Covid mRNA “vaccines.”

During a major study, the eminent Irish researchers analyzed the cases of dozens of children who had been hospitalized with heart-related problems.

Alarmingly, every single one of the children had been given at least one dose of a Covid mRNA vaccine before they were admitted to hospital.

The researchers were unable to find any such reports of heart damage among unvaccinated children.

The study was conducted over an 11-month period at the Department of Pediatric Emergency Medicine at [Tallaght Hospital](#) in Dublin, Ireland.

The findings were [published](#) in the Official Journal of the Irish Medical Organization (IMJ)

The researchers launched their study to investigate surging reports of adolescents and young children with chest pain and diagnoses of pericarditis and myocarditis.

Pericarditis and myocarditis are forms of inflammation in and around the heart muscle, [according](#) to the U.S. Centers for Disease Control and Prevention (CDC).

Both disorders restrict the heart’s ability to pump blood around the body, leading to blood clots, strokes, cardiac arrest, and potentially sudden death.

The spike in cases of pericarditis and myocarditis in children started when vaccinations began for pediatric patients in Ireland.

During the study, the researchers analyzed 30 child patients, all aged between 13 and 15 years old, who had been hospitalized with pericarditis or myocarditis.

In Ireland, the Pfizer/BioNTech mRNA injection was the [recommended](#) “vaccine.”

Of the group, 23 patients were male.

The study excluded patients under the age of 12 and older than the age of 15.

All of the 30 children analyzed for the study were found to have received a Covid “vaccine.”

17 were diagnosed with pericarditis or myocarditis after the second dose of the vaccine and 13 patients suffered heart damage after just one shot.

Twenty-three boys and seven girls in that age range, all Covid-vaccinated, were hospitalized with heart damage.

Their reported symptoms include shortness of breath, chest pain, heart palpitations, and dizziness.

The study comes as experts around the world continue to raise the alarm over spikes in heart damage among the Covid-vaxxed.

In October of 2022, an Israeli doctor, Dror Mevorach, informed Pfizer the company's Covid mRNA shot was causing myocarditis in young men.

After discovering the first case, the doctor described a "gut feeling" he had that the heart ailment was a side effect of the Pfizer shot.

The Israeli Ministry of Health told Mevorach to assemble a group of doctors and study the effects of the vaccine.

Israel keeps a nationwide surveillance system administered by the ministry.

This allowed Mevorach and his group to monitor patients who had taken the Pfizer "vaccine."

The group found skyrocketing cases of myocarditis in young men after getting the shot.

In their study, over four hundred thousand people were vaccinated and approximately half were male.

The study found that the risk of myocarditis in "adolescent" males after the second shot was over ten times higher than in "adolescent" females.

When Mevorach informed Pfizer of the study's findings, the company ignored him for four months until the doctor published his findings in the [New England Journal of Medicine](#).

As Slay News recently [reported](#), another major study, this time involving 1.7 million children, found that heart damage only appeared in children who had received Covid mRNA vaccines.

Not a single unvaccinated child in the group suffered from heart-related problems.

In addition, the researchers note zero children from the entire group, vaccinated or unvaccinated, died from COVID-19.

Furthermore, the study found that Covid shots offered the children very little protection from the virus, with many becoming infected after just 14 to 15 weeks of receiving an injection.

The 1.7 million children observed in the study were between the ages of 5 to 15 and were registered with the UK's National Healthcare System (NHS).

The study was conducted by a team of leading UK medical doctors, epidemiologists,

biostatisticians, and public health experts led by Oxford University's Professor Colm D Andrews.

Cardiac Investigations in Paediatric Patients with Chest Pain Following COVID-19 mRNA Vaccination

D. Memon, I. Dafalla, AA. Raba, I. Krebit

Department of Paediatric Emergency Medicine, Children's Health Ireland at Tallaght, Dublin
24, Ireland.

Abstract

Aim

It has been noted the presentation of paediatric patients to the Emergency Department with chest pain following COVID-19 mRNA vaccination. There have been reports of pericarditis and myocarditis diagnoses in some of these adolescent patients. This study aimed to determine the safety and efficacy of current guidelines for investigating chest pain COVID-19 mRNA vaccination.

Methods

This was a retrospective study, assessing the data over a 11 month period between August 2021 (when vaccinations for paediatric patients aged between 12-15 years first began in Ireland) to June 2022.

Results

In total, 30 patients met the criteria for involvement in this study. 23 (77%) patients were male. 17 (57%) patients reported symptoms after the second dose vaccine, and 13 (43%) patients after the first dose. Regarding investigations performed, all patients had an ECG performed and reviewed in the ED. 28 patients (93%) had a troponin level performed in the ED. Only 20 patients (67%) had a chest radiograph, and 12 patients (40%) had a creatine kinase level measured in the ED.

Discussion

In conclusion, initial investigations of ECG and troponin are key in informing whether specialist referral and further investigations such as echocardiogram or cardiac MRI are necessary.

Methods

A single centre retrospective study was performed at Tallaght University Hospital, assessing the data over a 11 month period between August 2021 (when vaccinations for paediatric patients aged between 12-15 years first began in Ireland) to June 2022.

This study included all patients within the 12-15 year age group, presenting with new-onset chest pain, shortness of breath, syncope, palpitations or dizziness within 6 weeks of COVID-19 mRNA vaccination (either 1st of 2nd dose). We excluded any patient younger than 12 years or older than 15 years of age, or those with chest pain not related to COVID-19 vaccination or any other pre-existing medical condition.

A total of 30 patients met the criteria for inclusion in the study. All patients were between the age of 12-15 years, with a median age of 13.5 years. 23 (77%) patients were male, reflecting a similar male preponderance seen in other case series³. 17 (57%) patients reported symptoms beginning after the second dose of the Pfizer Covid mRNA vaccine, and 13 (43%) patients after the first dose (Figure 1).

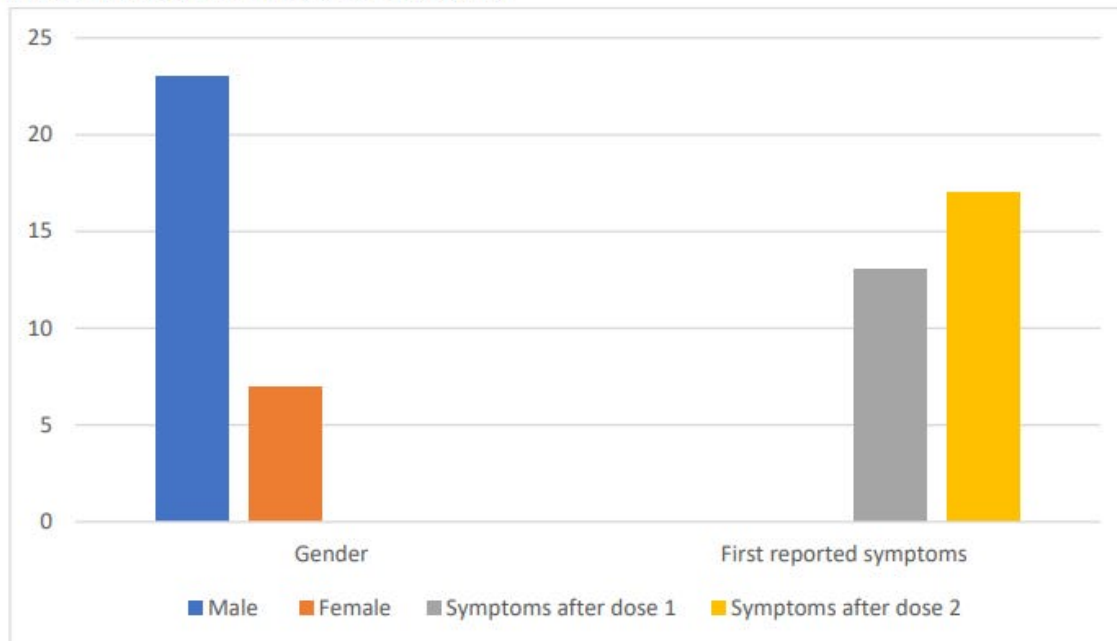

Figure 1: The gender split and dose after which symptoms first began for this study's patients

There is so much evidence to pull the shots off the market for children 18 and under, but no politician with the guts to actually do it.

Maybe Slovakia will be the first country in the world to ban COVID-19 mRNA vaccines. I know my fellow countrymen, we don't quit and we don't bend the knee. Just look at me and Alberta Health Services.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. -Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test - which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. –David Skripac

A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global coup d’état under way called “The Great Reset” that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it’s too late. You will not find so much valuable information and analysis in one place. –Edward Curtin
