

Towards a New Iron Curtain: The US-NATO Missile Shield Encircles Eurasia

By [Mahdi Darius Nazemroaya](#)

Western Europe through NATO and the E.U. forms the primary bridgehead of America into Eurasia.

According to Brzezinski: “[NATO and the E.U. constitute] America’s most important global relationship. It is the springboard for U.S. global involvement, enabling America to play the decisive role of arbiter in Eurasia — the world’s central arena of power — and it creates a coalition that is globally dominant in all key dimensions of power and influence.” [1]

The secondary bridgeheads of America into Eurasia are: (1) Japan and South Korea; (2) the Arabian Peninsula; and (3) the U.S. and NATO military forces in occupied Iraq and Afghanistan.

This is why the expansion of the U.S. missile shield from a U.S. project to a NATO project should come as no surprise. The globalization of NATO is part of that process. The inclusion of the missile shield project under the helm of NATO was already in the pipeline in the 1990s. In fact, the statements that NATO just adopted the missile shield project in 2010 are bold faced lies.

U.S. and NATO Missile Proliferation

Records of active NATO missile system proliferation go all the way back to 2006 with the Active Layered Theatre Ballistic Missile Defence (ALTBMD) program. Within NATO, the U.S., Britain, Denmark, France, Germany, Italy, the Netherlands, Poland, and the Czech Republic have been working together for years in establishing a missile shield system. While Israel, India, Australia, Taiwan, Japan, and Ukraine under its former Orangist government have all been partners.

NATO even drafted a missile coordination policy in the same year as the Anglo-American invasion of Iraq, 2003. The draft was ratified by NATO the next year, in 2004. France was also working on its own ballistic missile (SAMP-T) system, while the Dutch, Germans, and Americans were jointly developing the integrated Extended Air/Theater Missile systems through Project Optic Windmill.

“The Ring of Fire” and the New Iron Curtain: The Three Theatres of the Inter-Continental Missile Shield Project

The missile shield project is really a triad of three missile shields that form a global missile

shield system surrounding Eurasia. The three theatre segments of the missile shield are based in Europe, the Middle East, and East Asia. East Asia includes both Northeast Asia and Southeast Asia. Moreover, there are also overlapping zones that link the triad of missile shields. These are: (1) the Mediterranean, which links Europe and the Middle East; (2) the Indian Ocean, which links the Middle East and East Asia; and (3) North America.

North America acts as the strategic depth of this weapons system and in reality is its command centre. The system is linked to North American missile defences over the U.S., Canada, and Greenland. North America also serves to augment the missile systems in both East Asia and Europe.

While Iran has been cited as a justification for a missile shield in Europe, the location of military facilities in Greenland says something else. Geographically, Greenland is not a proper location to monitor any possible North Korean missile threat or located in the best place to monitor any possible Iranian missile threat. Greenland is ideal for monitoring Russian missiles that would travel over the Arctic Circle as the most logical route.

The European missile project is primarily aimed at Russia, while the East Asian missile project is aimed primarily at China under the pretext of defence against North Korea. The Middle Eastern portion of the missile project is in Israel and the Persian Gulf, hosted by countries like Saudi Arabia, and aimed at Iran and Syria. The establishment of a missile shield in Turkey will primarily be aimed against Iran and Syria and will also provide the cover for an Israeli attempt to attack Iran. In this context, many voices in Turkey have been raised in opposition to Turkish participation in the NATO missile shield project. This includes the leader of the People's Voice Party of Turkey who has said that the missile shield project could lead to World War III. [2]

From New Iron Curtain to Star Wars: The Militarization of Space

In regards to the Asiatic missile project, Australia has also been working with the U.S. and Japan. There is also a drive to raise a missile shield in South Asia with India. This effectively means that Eurasia would be encircled by a ring of missile systems.

This is also why Russia has been working closely with its allies in Kazakhstan, Belarus, and China on missile defences and China has developed a missile system that can destroy U.S.-NATO satellites.

The multi-layered U.S. and NATO global missile shield system is tied into the militarization of space.
