'When they told me I had cancer I just kept crying' - Grimsby girl, 14

Alana Bee has been diagnosed with rhabdomyosarcoma, a rare form of cancer

NEWS By **Luke Green** Reporter
05:00, 11 OCT 2023

Alana Bee, 14, was 'heartbroken' when doctors told her she had a rare cervical cancer (Image: Submitted Image)

Oct. 11, 2023 - Grimsby, UK - 14 year old Alana Bee was just diagnosed with a rhabdomyosarcoma of the cervix spreading into the uterus, bladder, bowel, etc.

A teenager has described her "devastating" experience of battling a rare form of cancer at the age of just 14. Alana Bee, from Grimsby, went to the doctors after an unusual period and was told she had a type of cervical cancer called rhabdomyosarcoma. She was diagnosed just weeks after her 14th birthday and almost immediately had surgery to remove one of her ovaries.

Alana and her mum Vanya were left devastated when they were told the news in June before the teenager started a course of chemotherapy in July. However, Alana suffered from heavy bleeding after the first two rounds and had to have multiple transfusions. Sadly, the bleeding continued and she was rushed to Leeds for a total hysterectomy to remove the tumour.

Now at home recovering, she told [GrimsbyLive](#) of her "devastating" experience as she prepares for the next round of chemotherapy to ensure the tumour doesn't spread to the rest of the body.

She said: "I went to the doctors in February after having an unusual period and was given antibiotics at first, but nothing changed and I knew something wasn't right. Eventually, I was sent for a biopsy and an MRI which is when they told me I had a tumour on my cervix and into my uterus."

Alana was also told the tumour may have spread to her bladder and bowel. However, when doctors delivered the news, she didn't know what to think. "It was devastating and really sad," said Alana. "I remember just crying and crying and asking if my hair would fall out.

[Oct. 20, 2023](#) - Bristol, PA - 19 year old Antwoine Fordham was diagnosed with Rhabdomyosarcoma in his calf that has attached itself to bone and blood vessels.

Antwoine's fight to overcome sarcoma cancer

Heather Fordham is organizing this fundraiser.

Hi, my name is Heather and I'm fundraising for my 19 year old son (Antwoine) who was recently diagnosed with sarcoma cancer. He will start with intense chemo and radiation treatments, in hopes to shrink the tumor that's in his calf that has attached itself to bone and blood vessels. We are praying that we can avoid amputation. My son and I (I'm his soul caretaker) are unable to work during this process, any donations are greatly appreciated. Please pray for Antwoine and also share this link. Updates will come. Thank you.

October 20th, 2023 by Heather Fordham, Organizer

please share.... this is my 20 year old son and the chemo didn't shrink the tumor enough.

We are excited to announce the Phoenix Cup Hero for 2023: Mallory Jatzlau!

Mallory is 12 years old and the middle child of a family of seven, with two brothers and two sisters. To know Mallory is special, she is fierce, competitive, independent and a cheerful girl who enjoys spending time with friends, and loves dancing. She dances competitively as a member of The PAC's pre-professional dance company and the Houston Rockets Little Dippers youth dance team.

Mal was putting in 35+ hours each week into her training and traveled on weekends to dance conventions to train even more. She is a tough competitor who loves to work hard, and even at 4 years old earned the nickname Beast Mal because of her ability to go "beast mode" and overcome any hard challenge. In July, Mallory decided to retire from gymnastics to focus all her efforts into her dance training and pursue her dreams of becoming a professional dancer in the commercial dance industry.

Unfortunately, in September Mallory was diagnosed with Rhabdomyosarcoma, a rare cancer that forms in soft tissue. Her family was devastated, heartbroken and scared. But SORRY cancer, you messed with the wrong dancer because Mallory is a natural born warrior and fighter. Mal is ready to rise above cancer and do what is needed so she can be healed and get back to dance and accomplishing all the goals she has for herself. Her family

[Oct. 18, 2023](#) - Glen Falls, NY - 12 year old Brookelle McMullin is a 6th grader in Queensbury Middle School, who was just diagnosed with Stage 4 Rhabdomyosarcoma after biopsy of a swollen node in her neck.

Brookelle's Battle with Rhabdomyosarcoma

 Courtney Harris is organizing this fundraiser.

Created 5 d ago •  [Medical](#)

Hello friends! If you're reading this, it's likely you know the beautiful and amazing Brookelle McMullin or someone else that loves her. This young lady and her family need your help and support very much.

About a month ago, Brookelle went into Albany Medical Center for a biopsy on a swollen lymph node in her neck. What we expected to be a routine biopsy, turned into our worst nightmare. Shortly after her surgery, the test results came back saying she had Stage 4 cancer called rhabdomyosarcoma, which is affecting her soft tissues. More tests came and went and those results showed that the cancer had moved to her lymph nodes as well as several places in her bones.

We were lucky to immediately secure a wonderful team of doctors at Albany Med, who built an aggressive but hopeful treatment plan. Brookelle starts chemotherapy on October 20, which will continue for 42 weeks. About halfway through the chemo treatment,

Teddy Marks was diagnosed with Rhabdomyosarcoma in Jan. 2022. After treatment, he was cancer free for 6 months. However, he relapsed in Feb. 2023 and is terminal with no treatment options left.

Please help! Teddie needs life saving treatment

Lorraine Cavanagh is organizing this fundraiser on behalf of Teddie Marks.

Teddie was diagnosed with a rare aggressive cancer called Rhabdomyosarcoma in Jan 2022 at 16 years old. He has gone through 6 months of grueling chemotherapy and proton beam therapy and was cancer free for 6 months.

Unfortunately he relapsed in Feb 2023 and underwent more chemotherapy and an operation. After 7 months of treatment it has now stopped responding.

The day before his 18th birthday he was told no further treatment was available on the NHS but Teddie has been given a positive outcome if we can raise the funds for him to have pioneering treatment called Dendric Cell Therapy

[Sep. 21, 2023](#) - Dalton, GA - 16 year old Gavin Keener was diagnosed with Rhabdomyosarcoma. His mom is a Nurse practitioner.

Hello, I'm April and I'm starting this fundraiser to help my sister Panda and her 16-year-old son Gavin. **Gavin was diagnosed with a very rare and aggressive cancer called Rhabdomyosarcoma.** My sister Panda is a loving single-mother and a dedicated nurse practitioner who is currently overwhelmed with challenges, both financial and emotional.

Due to the rarity of Gavin's cancer, he has to attend a specialist treatment center at Vanderbilt University Children's Hospital in Nashville. This means they must travel over three hours each way for his weekly chemotherapy treatments. As the treatments begin in early morning and often last more than 8 hours, it means overnight stays.

My sister Panda is used to being self-reliant; however, this situation is proving impossible to navigate alone. It will be difficult for Panda to return to work during Gavin's treatment due to the round-the-clock monitoring and care he requires, the days traveling to treatment, and increased risk of exposure to a dangerous infection.

[Sep. 19, 2023](#) - Santee, CA - 16 year old Hudson Watts was diagnosed with Stage 2A Alveolar Rhabdomyosarcoma.

Hudson beginning his fight!!

I am not one to ask, I am always the one that shows up for everyone else. But this time I am asking for help. Not for me, but for my family, more importantly for Hudson, my 16 year old son. Hudson is in a fight for his life to an UGLY VILLAIN named cancer. We first became aware there was an issue in late July when he wasn't getting better from an earlier illness he had. He noticed his voice changing. He was ready for an appointment with the doctor to see what was going on. Little did we know our world was about to change. After the Dr's appointments, a trip to the ER, and being transferred to another hospital via ambulance, emergency surgery to open his airway, we were told there was a chance this was going to get bad. Before being discharged the news came to us.... confirmed cancer.

Hudson will be treated for alveolar rhabdomyosarcoma stage 2a. Between Kaiser Permanente, Rady's Children's Hospital, and UCSD Moores cancer Center... we are looking at near a year of intensive treatments, surgeries, and hospital stays.

[Sep. 18, 2023](#) - UK - 13 year old Kane Harris was diagnosed with Rhabdomyosarcoma in July 2022. He had extensive treatments which finished on June 29, 2023. However, he had a recurrence in Aug. 2023 with 3 large tumors on major organs and died on Sep. 18, 2023.

In loving memory of Kane Harris

 Team fundraiser

Lisa Harris and 2 others are organizing this fundraiser.

Kane's story

Kane was diagnosed with Rhabdomyosarcoma back in July 2022. Rhabdomyosarcoma (RMS) is a rare type of Children's cancer.

A truly happy day was on 29th June when Kane rang the bell to symbolise, he had finally finished his gruelling treatment, and we thought his fight was finally over.

He had a well-deserved break to spend some quality time with his nana in Middlesbrough. Things were really starting to look good for Kane he was managing to make it around the house on his crutches and had lots more energy. He was really excited for his trip to Disney Paris which was booked for September.

His dad had booked a holiday for them both to Dorset their special place.

However, in August 2023, we got the devastating news that the cancer had returned that he had 3 large tumours on major organs and that he only had weeks left.

Sadly, our precious Kane had just turned 14 when he closed his eyes and went to sleep for the very last time on the 18th of September 2023. Almost 4 weeks after the tragic diagnosis.

Erie, CO

Hi, I'm Sara, a longtime close friend of Katie's parents. As Katie and her family navigate her recent diagnosis, we don't want any worries about paying for her treatment or covering other bills while the focus is on caring for Katie.

At 19, Katie has been diagnosed with Stage 4 Sarcoma. Biopsies and other tests are still being done to determine the course of treatment. The cancer is not curable.

August 31st, 2023 by Sara Mares, Organizer

On August 27th, Katie passed away. Her sweet spirit will live on forever in our hearts. Memorial in formation to come as arrangements are made.

[Aug. 15, 2023](#) - Phoenix, AZ - 12 year old David Popescu had a bump on his cheek and was diagnosed with Rhabdomyosarcoma in Sep.2022. He was declared cancer free after treatment, but in March 2023 it returned in the shoulder.

David's Cancer Fight Against Rhabdomyosarcoma

Lisa Fuse is organizing this fundraiser on behalf of Raluca Popescu.

Lisa Fuse →

Organizer
Phoenix, AZ

Thank you for reading about David's story. My son Tommy and David have been best friends since 6th grade. During the start of that school year, David was given the scariest diagnosis no young child should ever have to hear. What was just thought to be an innocuous bump on his cheek turned out to be an aggressive form of childhood cancer called Rhabdomyosarcoma. Rhabdomyosarcoma is an extremely rare type of cancer that forms in soft tissue — specifically skeletal muscle tissue. At age 12, David went through countless chemotherapy treatments, radiation, and incredibly risky surgery in his battle with this horrible disease. With the love of his family, friends and supremely skilled doctors, surgeons, nurses and medical professionals, he was able to be declared cancer free after these initial grueling treatments.

David was so excited to be starting high school this year when his parents discovered another small lump on his shoulder in March. With the heaviest of hearts, David and his family's worst fears were confirmed with a biopsy indicating that his Rhabdomyosarcoma had returned and metastasized in a very challenging area to treat. He immediately began rounds of chemotherapy, radiation and traveled to Boston to find the very best cancer doctor willing to take David's case on.

[Aug. 14, 2023](#) - Champlin, MN - 15 year old Tanner Anderson had abdominal pains in November 2022 and was diagnosed with Rhabdomyosarcoma. He died 9 months later.

Tribute to Tanner Anderson

Lisa Hermansen is organizing this fundraiser on behalf of Angie Anderson.

Tanner's story started on November 12, 2022 - he was complaining of stomach issues and a dull pain in his lower stomach below his waist. They thought it was a bug or something of the sort and encouraged him to drink more water to try to flush whatever it was out of his stomach.

At Children's, they did a CT and ultrasound. The ultrasound confirmed the spot and also another spot near the first one. It also showed thickening of the bladder wall (sometimes means cancer cells), along with most of the lymph nodes in the area being enlarged with one that is very large. The few scans that the CT picked up also showed enlarged lymph nodes on both sides of his chest. Tanner was diagnosed with a cancer called Rhabdomyosarcoma. So, with all of those things combined, he started the fight of his life.

Tanner is only 15 years old. He has spent the last 9 months down at the Mayo clinic or Children's Hospital. He has undergone weeks of Chemotherapy, Radiation and numerous tests. They received the news that there are no more treatments they can offer.

August 14, 2023

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. -Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a

relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists.
—Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. –David Skripac

A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global coup d’état under way called “The Great Reset” that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it’s too late. You will not find so much valuable information and analysis in one place. –Edward Curtin
