I have written several substacks on COVID-19 mRNA vaccine induced turbo leukemias and lymphomas:

- May.2, 2023 - turbo leukemias in children ages 11-21 ([click here](#))
- Mar.7, 2023 - leukemias skyrocketing in children & young adults ([click here](#))
- Feb.20, 2023 - 21 yo Evan Fischel died 4 days after diagnosis ([click here](#))
- Apr.2, 2023 - turbo lymphoma - California photographer Mike Lim ([click here](#))

These cases continue to happen, and they are still shocking and disturbing, as the medical establishment continues to deny this phenomenon exists:

Remsenburg, NY - 40 year old Lauren Jill (LJ) Delman Hanechak died suddenly on June 13, 2023 ([click here](#))

Girl Orphaned After Mother's Sudden Death: 'Just So Heartbreaking'

Keely, 10, is now an orphan after her mother died of leukemia 4 days after being diagnosed; her dad died 3 years ago. Here's how to help.

Lisa Finn, Patch Staff

WESTHAMPTON BEACH, NY — The Westhampton Beach community was rocked by an unthinkable loss recently that left a little girl, 10, an orphan.

A GoFundMe, "[Help Keely With Her Immediate Needs and Future](#)," was created by Alice Eisenberg.

"On Tuesday, June 13, our community was shaken by the sudden loss of Lauren Jill (LJ) Delman Hanechak, who passed away unexpectedly from acute myeloid leukemia (AML) only four days after she had been diagnosed," Eisenberg wrote.

LJ's husband, Rob, died only three years ago in March 2020.

"Keely, their beloved 10-year-old daughter, is now suddenly left without her parents," she said. "LJ had named me, Alice, as Keely's legal guardian if she were to die — and I will make sure that Keely is always cared for and knows how much she is loved."

Find out what's happening in Westhampton-Hampton Bays with free, real-time updates from Patch.

Eisenberg said she is dedicated to ensuring that Keely is safe and cared for in her community on Long Island right now, where she is committed to finishing the school year and going to her summer camps as planned.

"We are all heartbroken for Keely and want to ensure that she has the support she needs during this difficult time," Eisenberg wrote. "LJ was a single mom without a safety net who worked hard to make ends meet."

The goal of the GoFundMe, she said, is to raise money to help Keely with her immediate needs, legal fees, and provide for her future financial stability. Funds will also be used to cover LJ's memorial and celebration of life.

A GoFundme has been setup for her 10 year old daughter who has been made an orphan ([click here](#)).

Help Keely With Her Immediate Needs and Future

 Alice Eisenberg is organizing this fundraiser on behalf of Keely Hanechak.

On Tuesday, June 13, our community was shaken by the sudden loss of Lauren Jill (LJ) Delman Hanechak who passed away unexpectedly from Acute Myeloid Leukemia (AML) only 4 days after she had been diagnosed. LJ's husband, Rob, died only 3 years ago in March 2020. Keely, their beloved 10-year-old daughter, is now suddenly left without her parents. LJ had named me, Alice, as Keely's legal guardian if she were to die and I will make sure that Keely is always cared for and knows how much she is loved. The Story

Lauren Hanechak was a 40 year old bartender in New York with a 10 year old daughter. Her husband died of a heart attack on March 20, 2020.

She was fully COVID-19 vaccinated and posted about it on facebook in Oct.2021.

Her facebook and instagram accounts reveal a regular life of a mother and 10 year old daughter with nothing out of the ordinary.

Then on June 13, 2023, Lauren died suddenly and friends reveal that she had been diagnosed with Acute Myeloid Leukemia (AML) just 4 days prior to her sudden death.

Leukemia diagnosis to death in just 4 days. And now her 10 year old daughter is an orphan.

I have written about turbo leukemias with identical stories. Diagnosis to death in days, sometimes even in hours. Death is usually from internal bleeding.

These leukemias are the most rapid of all post COVID-19 vaccine turbo cancers.

New Study has 14 mice injected with Pfizer COVID-19 mRNA vaccines. One mouse died suddenly of turbo cancer

A new Belgian study by Sander Eens et al. was published on May 1, 2023 ([click here](#))

They injected 14 mice with two Pfizer COVID-19 mRNA vaccines.

Two days after the 2nd dose and 16 days after 1st dose, one of the mice died suddenly without any warning.

Authors write: “there was no specific lead-up to this spontaneous death since no abnormalities were observed during daily examination for follow-up of animal welfare....the animal was still routinely weighed in the morning prior to the sudden death without displaying externally evident clinical symptoms”

They were shocked by what they saw on autopsy:

[Figure 2](#)

Necropsy examination of organs following spontaneous death. **(A)** A disproportional enlargement of several of the animal's major organs was observed at necropsy, including the liver, kidneys, spleen, and intestines (*black arrows*). **(B)** Animal with normal phenotype for reference.

“At necropsy examination, a disproportional enlargement of several major thoracic and abdominal organs was observed, including the liver, kidneys, spleen, lungs, and intestines”

“The above histopathological observations suggested extensive, systemic infiltration of the organs by a malignant lymphoid neoplasm, morphologically most suggestive of a Burkitt lymphoma (BL) or B-cell lymphoblastic lymphoma (B-LBL)”

To summarize, 1 out of 14 mice died suddenly two days after 2nd Pfizer mRNA dose, and had multiple organs completely infiltrated with an aggressive “turbo cancer” - a rare lymphoma.

My Take...

40 year old Lauren Hanechak was fully COVID-19 vaccinated and did not complain of any vaccine injuries.

Then one day, she was diagnosed with leukemia and 4 days later she was dead.

I have written about similar such incidents and there are many of them, but they are always shocking.

The Belgian mouse study is new and it is the 2nd study to show “turbo cancer” after Pfizer COVID-19 mRNA vaccination ([first study was this one](#)).

These are the kinds of studies that Pfizer & Moderna should have done but didn't.

It's a small sample but 1 in 14, or 7% of Pfizered mice got “turbo cancer” isn't reassuring.

Not only that, but the turbo cancer mouse died suddenly with no warning signs of any illness. That's a little too close to real life.

And its organs were full of cancer.

Putting things into perspective. This “turbo cancer” 14 mouse study was bigger than the study that was used to approve COVID-19 mRNA Omicron bivalent boosters for 100s of millions of people - that study only had 8 mice.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

ISBN: 978-0-9879389-3-0, Year: 2022, PDF Ebook, Pages: 164, 15 Chapters
