

Turbo Lung Cancer: 24-Year-Old UK Paramedic Coughed Up Blood and Died Within Five Months of Stage 4 Lung Cancer Diagnosis

Another type of COVID-19 mRNA vaccine-induced turbo cancer?

"Turbo cancer" is a non-medical term that has arisen to describe very aggressive and rapidly progressive cancers following Pfizer or Moderna COVID-19 mRNA vaccination and suppression of the immune system.

I have written 13 substacks about turbo cancers so far:

- turbo cancers in Canadian doctors ([click here](#))
- turbo cancer leukemias ([click here](#)) and children ([click here](#)) and ([click here](#))
- turbo cancer lymphoma ([click here](#))
- turbo brain cancer glioblastomas ([click here](#)) and ([click here](#))
- turbo cervical cancer ([click here](#))
- turbo testicular cancer in athletes ([click here](#))
- turbo cancer of appendix ([click here](#))
- turbo sarcomas ([click here](#))
- turbo colon cancers ([click here](#))
- turbo gastric cancers ([click here](#))

Today's focus is on turbo lung cancers.

Clydebank, UK - 24 yo paramedic Meadhbh Cameron died on Mar. 11, 2023. She was diagnosed with Stage 4 lung cancer in Sep. 2022, which was resistant to chemo and she died within 5 months of diagnosis ([click here](#))

SUDDEN LOSS Newlywed pays tribute to 'caring and compassionate' paramedic wife Meadhbh Cameron, 24, who died after tying the knot

Alice Fuller

Published: 11:34, 31 May 2023 | Updated: 12:20, 31 May 2023

A PARAMEDIC died from a form of lung cancer most common in smokers - despite never taking up the habit.

Meadhbh Cameron passed away on March 11 after being told two days before [Christmas](#) that she had just weeks to live.

The 24-year-old first noticed something was wrong in September when she coughed up a blood clot while in hospital as part of her job.

She had an intermittent night-time cough but no other [symptoms](#), however a scan revealed a shadow on her lung.

Four weeks later, Meadhbh was told she had stage 4 combined small cell [lung cancer](#) - an extremely aggressive and rare form of [cancer](#), not typically seen in a young, non-[smoker](#) in good health.

Meadhbh, who worked in Clydebank, [West Dunbartonshire](#), was given [chemotherapy](#) but the cancer had spread to bones and lymph nodes.

"They informed us that with chemo Meadhbh would likely have a year to live, if not more due to her age and health."

Meadhbh received three rounds of chemo but was hospitalised each time with neutropenia - a condition which results in a low number of white blood cells, neutrophils, in blood.

Lee said: "On the third time she was hospitalised, we were informed that [Meadhbh's treatment wasn't working](#) and that the cancer in her spine was compressing her spinal cord.

"On December 23, we were told that she had six to eight weeks to live."

Meadhbh passed away the day after Lee's 27th birthday.

UK journalist, 45 year old Emily Morgan died after "short battle" (2 months?) with lung cancer ([click here](#)).

Hidden lung cancer symptoms after ITV newsreader Emily Morgan's tragic death at 45

ITV News journalist Emily Morgan has died at the age of 45, it has been announced, with tributes from her colleagues flooding social media for the journalist who reported from the frontlines in Covid

By **Hannah Kane**, Assistant News Editor

00:39, 28 May 2023 | UPDATED 18:36, 28 May 2023

BOOKMARK

ITV newsreader Emily Morgan has died of lung cancer at the age of 45.

She passed away on Friday night after a short battle with the disease, surrounded by her family.

Emily Morgan has died of lung cancer

Emily Morgan passed away on May 26, 2023 after a short battle with lung cancer.

She had stopped Tweeting from her account @emilymorganitv on March 30, 2023.

Although more details are not available, it seems that her “short battle with lung cancer” lasted about 2 months.

Connecticut – 62 yo Abbe Brod Funk died on May 29, 2023 after a 6 month battle with Stage 4 small cell lung cancer

Here is her cancer story:

In November of 2022, they sold and packed up their home in California and with their vociferous and malcontented cats drove moved back to their home state of Connecticut, where they could begin relaxing around friends and family.

Within a few days of their arrival, both Doug and Abbe had what seemed like the beginning of pneumonia. They made a trip to urgent care. Both of them were given a prescription for antibiotics. Doug almost immediately showed signs of recovery, but Abbe did not.

Within a few short weeks, Abbe was diagnosed with stage 4 small-cell lung cancer. It had already spread into her upper back, liver and lymph system and her breathing is severely stressed. She was told this was a terminal condition, and perhaps she could expect another year of life. This was not the homecoming they were hoping for.

She has attempted several rounds of chemotherapy to slow down the spread. They have been unsuccessful, and in fact, the treatments almost killed her. After her last emergency hospital stay, she decided to live her remaining time in her home under hospice care.

Swift Current, NL – Lorraine Andrews’ son had his lung cancer return

Lorraine Andrews
18m · 🌐

My son was diagnosed with lung cancer in 2021. He was doing great up until he was convinced by his doctor to get the C shot. Two months after the shot tumours started to appear in other parts of his body and things went down hill from there and he passed away exactly one year later. My feeling is he would have lived longer and had a better quality of life if he had not got the shot. Please see this important information so you can take action to protect your health.

Tumwater, WA – Corrections Deputy Kenneth Richard Anderson died on June 2, 2023 after short battle with lung cancer ([click here](#))

On Patrol Live Nation · [Join](#)

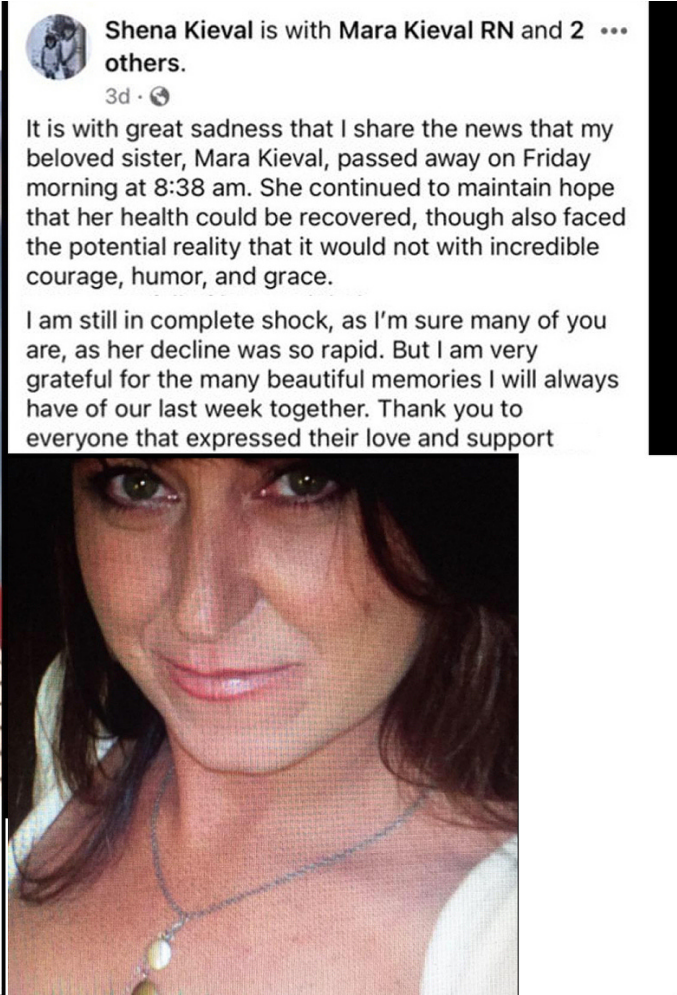

Brian Boman · June 2 at 3:13 PM · 🌐

It is with great sadness we share the passing of Corrections Deputy Kenneth Anderson after a short battle with lung cancer. This was Kenny's third battle with cancer. Kenny was hired as a part-time Corrections Deputy on February 6, 2001 and made fulltime on March 1, 2002. Being the youngest Corrections Deputy on staff at the time and the son of now Retired Corrections Deputy Paul Anderson, Kenny quickly earned the nick name "baby Anderson". During his time with TCSO Kenny was named Employee of the Month in February 2008 and selected for the Medical Liaison special duty position in 2022. He was our go to for any computer issues, a spreadsheet wizard, and always looking for ways to make everyday activities easier around the jail. Please keep Kenny's wife, Janaa, and 15-year-old son, Logan, along with the rest of his family in your thoughts and prayers.

Portland, OR - 40s yo nurse Mara Kieval died suddenly on May 26, 2023 after a "severe health crisis" She had a COVID-19 mRNA vaccine booster on Nov. 27, 2021. She was diagnosed with lung cancer 1 month prior to death.

On Friday morning, May 19, Mara Kieval, WSNA Nurse Representative, passed away. She was surrounded by her family. You may or may not have been aware that she had battled breast cancer and seemed to have won the fight. That fight was short-lived, unfortunately. A month ago, she was diagnosed with an aggressive form of lung cancer.

Her family at WSNA is devastated by the news. She was a fierce fighter for the rights of nurses.

I will be covering for Mara until we are able to hire a new nurse rep. In the meantime, feel free to email or call me on my cell.

Carmen Garrison, BSN, RN

Same thing happened 2 my neighbor. Nvr smoked a day in his life. Went 2 the ER immediately after his 1st Pfizer shot. Got diagnosed w lung cancer. Died in 27 days. Tumor grew the size in that time what normally takes 6 months. Drs at MD Anderson admitted it was likely the shot.

Interesting as I lost my father about 90 days after his Pfizer booster. Sudden aggressive lung cancer in which his oncologists said they had never seen anything like it. He put his trust in the gov & vaccine.

My mother. No previous cancer but 3 months after the second dose of Pfizer, stage 4 lung cancer that metastasized to her T9 vertebrae... I don't think it's coincidental. Healthy as a horse prior to the shots.

Your cancer journey in the Atlantic has resonated with me bc I have a similiar situation as u.
[I rcvd Moderna shot & booster in Feb/Mar 21 and was dx'd with lung cancer in Aug 21.](#) There are more unusual facts to my case I would like to share w you.
Pls advise!

KrissySnow @iamkristaleigh · Oct 17, 2021 ...

Replying to @jared3268
I have a friend who had been battling lung cancer since 2017. His cancer was stable enough that they paused the chemo in March right around the same time [he got the 2nd Moderna shot. The cancer came back aggressively and he died in June](#)

My Take...

The underlying mechanism of turbo cancer is most likely some type of COVID-19 vaccine induced immune system suppression that gives rise to rapidly growing and rapidly progressive cancers of the breast, lung, colon, gastric, gallbladder, pancreas, brain, lymphoma, leukemia and so on.

There are a number of theories in regards to what is causing COVID-19 vaccine induced immune system dysfunction: TLR suppression, T-cell dysfunction, IgG4 shift, DNA contamination of mRNA vials with plasmids containing SV40 promoter, p53 inhibition, PD-L1 elevation, NK cell exhaustion and many more.

It is unclear at this time, what is the prevailing mechanism that causes turbo cancer.

The pattern emerging with turbo lung cancers is as follows:

- presents usually very late at Stage 4 with distant metastases
- survival from diagnosis to death is usually around 2 to 6 months, much shorter than the typical non-mRNA induced lung cancer
- resistant to conventional treatments like chemotherapy or radiation therapy
- right now there is not enough data to determine whether these are mostly NSCLC non-small cell lung cancer or SCLC small cell lung cancer types (I have seen examples of both)
- seems to be a problem with both Pfizer and Moderna COVID-19 mRNA vaccines

Turbo cancers are a new phenomenon in oncology and so far, oncologists are not recognizing that these turbo lung cancers, arising after COVID-19 mRNA vaccination, are behaving very differently.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”
