[Feb.18, 2024](#) - Australia - Two sisters in their 30s get Colon Cancer - no family history.

I thought bowel cancer was an 'old person's disease' - then my sister and I got it in our 30s. These are the symptoms we wish we knew about

- Elise started experiencing gut issues and thought it was endometriosis
- She was diagnosed with bowel cancer less than two years after her sister
- **READ MORE:** My 'pregnancy side effects' were actually a sign of a rare cancer

By LOUISE ALLINGHAM FOR DAILY MAIL AUSTRALIA

PUBLISHED: 03:06 EST, 18 February 2024 | UPDATED: 23:35 EST, 18 February 2024

A young Australian woman suffered gut issues for months before finding out she had stage three bowel cancer.

Elise Stapleton thought of bowel cancer as an 'old person's disease' before both she and her sister were diagnosed within two years of each other in their mid-thirties.

The 37-year-old initially thought her symptoms, including abdominal pain and diarrhoea, were related to her endometriosis which she had struggled with for years.

However, a pelvic scan found a large mass in her bowel and the months following were filled with multiple surgeries and harsh chemotherapy treatments.

But while it was a painful and challenging time for Elise, her journey through cancer wasn't all dark. She had met a man on Hinge who supported her during treatment.

In March 2021, Elise's 39-year-old sister Lana had been diagnosed with stage three bowel cancer so her family swiftly got themselves checked for the disease.

Elise's tests came back normal and there were no genetic links found.

So less than a year later when Elise started experiencing symptoms, she never would have suspected cancer.

'I had very sporadic abdominal pain more so on my left side, loose bowels and diarrhoea. I was going to the bathroom all the time and had some fatigue but everyone feels tired these days,' she said.

She suspected it was her endometriosis 'flaring up' as the symptoms were very similar so she waited three months before eventually visiting her gynaecologist in October of 2022.

The doctor recommended a pelvic scan to see what was going on with her endometriosis but it picked up a lesion in her bowel.

'At that point, my heart stopped. I was like, "Oh my god, it's cancer" because no one wants to hear the word "lesion",' she said.

With her sister's history, Elise said her gynaecologist 'didn't muck around' and was quick to get more specialists on board and conduct further tests and scans.

'Thankfully the MRI and CT (scans) came back saying there was no suspicion for malignancy,' Elise recalled.

Elise's gynaecologist and colorectal surgeon determined the lesion was likely her endometriosis causing the uterine lining to grow on her bowel so she was scheduled for a laparoscopy to remove it.

'I was planning to start a family and they said I need to be fit to be a mum so let's do the endo surgery. I was going in for my fourth laparoscopy,' she said.

But surgeons were not sure certain what they were going in for. Elise would either need a small hole punch procedure or a full abdominal surgery if they found the mass was more serious.

'My sister dropped me off and I had packed a bag for the night and said "I'll see you all tomorrow",' Elise recalled.

'It probably was better going into the surgery with that attitude but it led to the biggest shock of my life once they woke me up.'

Elise knew something wasn't right when she came to from the anaesthesia to see her surgeon and two nurses at the foot of her bed.

'I've had a few surgeries knowing you just have that one nurse beside you. I looked at my surgeon and said, "There's something wrong",' she said.

The surgeon broke the news they had found a mass and was '99 per cent sure' it was bowel cancer even though they had to wait for pathology results to confirm.

'I did believe that misconception that bowel cancer is an older person's disease and it's really not. My sister opened my eyes up a little bit but then I thought it wouldn't happen to me,' Elise said.

'It came as a complete shock. My world turned upside down that day.'

Just a few weeks after recovering from her surgery Elise returned to hospital to have another procedure where 30cm of her bowel was removed as well as some lymph nodes where the cancer had spread.

'Your bowels take a while to get back into the swing of it. It stops your bowel function, I had an enema, I couldn't open my bowels and then it's the opposite, I was constipated for a week, I needed laxatives in hospital,' she said.

'They've interrupted that flow of everything then you're on a soft diet, you can't really eat. There were a lot of changes going on in my body. The body is an amazing thing though, it's very resilient.'

Elise then endured six rounds of chemotherapy over a gruelling three months.

'It was pretty horrible to go through what I went through, I would wish it on no one,' she said.

Before her first surgery and diagnosis and despite her health scare, she was still swiping on the dating app Hinge and matched with a man named Kieran.

The pair started chatting and went on a couple of dates where they hit it off.

'I had kind of given up on men and I was like, "This is not going to happen", but then he completely blew me out of the water,' she said.

'We had a really good connection then we kept in contact via phone calls and messages. He went to Hawaii and was there at the time of my surgery.'

- March 2021, 39 year old Lana Stapleton was diagnosed with Stage 3 Colon Cancer
- genetic testing of the whole family showed no genetic links
- her sister Elise Stapleton began experiencing abdominal symptoms a year later in early 2022 and in late 2022 doctors thought she had endometriosis and was booked for surgery
- during surgery she was diagnosed with Stage 3 colon cancer

COVID-19 mRNA vaccine-induced turbo colon cancer – recent diagnoses under age 40; 20 recent cases:

Feb. 26, 2024 – TURBO CANCER – 33 year old University of Michigan football player Craig Roh was diagnosed with Stage 4 Colon Cancer in Aug. 2022. He died on Feb. 26, 2024 after 18 month battle.

Former University of Michigan player Craig Roh dies at age 33 of stage 4 colon cancer

Craig Roh was diagnosed with colon cancer in August 2022 and kept his diagnosis and treatment quiet

By Meghan Holohan | TODAY • Published February 29, 2024 • Updated on February 29, 2024 at 3:25 pm

Craig Roh @craigroh

This is @mrschelsearoh, Craig's wife. I wanted to let all of his followers know that after an 18-month battle with Stage IV colon cancer, God brought Craig home on Monday, February 26th. Craig was not very public with his battle, as he truly just wanted to focus on bringing the best content and building the best products he could. He laid out a timeline for his business so stay tuned... Many have asked how they can help, I've attached our GoFundMe to this post.

Craig Roh, a former college football standout at the University of Michigan, died on Feb. 26 at age 33 after grappling with colon cancer for 18 months, his wife, Chelsea Roh, announced on X, formerly Twitter.

"God brought Craig home," she wrote on the social media platform. "Craig was not very public with his battle."

According to a GoFundMe that Chelsea Roh shared, doctors diagnosed Craig Roh with stage 4 colon cancer in August 2022. The GoFundMe noted that the money raised will help Chelsea Roh and her son, Max, pay off medical expenses and cover school for him.

"Craig did not want to go public with his diagnosis and battle because in true Craig fashion, he did not want the attention to be on him," the GoFundMe stated. "From chemo to targeted therapy to clinical trials at MD Anderson and in Honduras, Craig was resilient till the very end."

Oct. 17, 2023 – Detroit, MI – 30s year old Shannon Elizabeth was diagnosed with Colon Cancer, MS, etc.

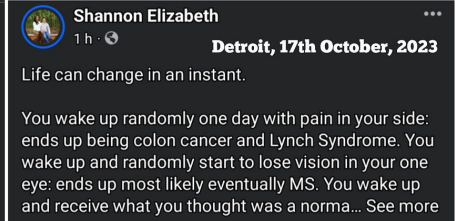

You wake up randomly one day with pain in your side: ends up being colon cancer and Lynch Syndrome. You wake up and randomly start to lose vision in your one eye: ends up most likely eventually MS. You wake up and receive what you thought was a normal phone call: your mom has unexpectedly passed away in the night on Mother's Day. You come home from school to grab your jersey for your soccer game: you find your dad having a brain aneurysm and have to take him off of life support a week later. This list can go on and on filled with challenges and tragedies of the above nature.

Through all of it, I have made anger my friend and manipulated it into motivation and do NOT take life or anything I can currently do for granted. It is why I have been on this path of crazy and vastly unexpected things. WHO wakes up one day and decides that she wants to become a physicist and then DOES it in her 30s?! Crazy! I know how precious life is - all of it: the good, the bad, the hard, the easy and the ugly.

But on top of that, it is not just that life can change. It is life as you know it can change. I used to just have a Lynch Syndrome cloud hanging over my head, but it now includes MS. Watching my mom lose her cognitive abilities, her mobility, the use of other important functions was watching her, as she described it, dying a very slow death. When I was told that I most likely have developed it or will develop it last fall, I was VERY annoyed and angry.

But, I have gotten to the point where I try to do whatever I can. Like in the picture below completing 3 miles and training for a trail half marathon. Because I have no clue if ever there will come a day when my path diverts to one that my mom had to follow. I hope not, but just in case I wake up on another random day and can't anymore, I am going to do it and enjoy it now.

Oct. 10, 2023 - Rand Weeks had a 14-day lower intestinal disorder and was diagnosed with Stage 4 Colon Cancer on Oct. 10, 2023.

Rand Weeks 13th October, 2023 New York
1 d · 🌐

Ooops! So, as the story has gone, I went into the ER with a 14-day persistent lower intestinal disorder last Tuesday. Within hours I was diagnosed with the worst possible illness imaginable. Stage IV colon cancer! Believe me if you feel shock reading this, imagine my reaction. Up until just weeks ago, I was out and about riding a bike to business appointments and meetings with boundless energy.

Now I'm fighting for my life and am not sure where each day will lead... but I'm taking it one day at a time, I feel no pain, and I'm prepared for any eventuality. I have excellent care, and family support.

But this is a terrible reminder to you to GET THAT COLONOSCOPY now. Don't hesitate...

[Sep. 21, 2023](#) - Ohio - 39 year old Rachael Allen is a beautician, on Jan. 21, 2023 she was diagnosed with Stage 4 Colon Cancer with masses in the liver and lungs. She is currently awaiting the results of her chemotherapy.

Tammy Ogden is organizing this fundraiser on behalf of Rachael Allen.

On January 21, 2023 our daughter Rachael Allen was diagnosed with stage 4 colon cancer. Rachael started having issues with nausea in November. After some blood work revealed elevated liver enzymes a series of test were ordered. Masses in both the liver and lungs were found by MRI. The primary cancer was then located in the colon. She is only 39 yrs old with ZERO risk factors for colon cancer and yet here we are. The outpouring of support

September 21st, 2023 by Tammy Ogden, Organizer

We are three chemo treatments from Rachael's next scans. Those results will determine the next course of treatment. Will it be more chemo? Will it be radiation? Will it be surgery? We have so many unknowns. The one constant we do have is our continued confidence the Lord is in control and He helps us.

[Sep. 16, 2023](#) - 35 year old Jessie Lee Ward, a corporate marketing executive, was diagnosed with Stage 4 Colon Cancer in March 2023 and died 5 months later on Sep. 16, 2023.

We will always remember Jessie Lee as our shooting star. Temporary brilliance that lived life to its fullest. Jessie Lee dreamed big, loved big and always made it happen in a big way. Her life was cut short but the years we've known her, she lived the quality of life equal to several lifetimes. Many knew her but those lucky enough to be loved by her will move forward accepting nothing less. Live as a reflection of her legacy.

We pray everyone mourning her now finds comfort that she's resting in peace.

Jessie Lee Ward, an ambassador and corporate executive for Prüvit, passed away September 16, 2023 after a brief and valiant fight against colon cancer.

Ward was born in Middletown, Maryland on October 12, 1987. She attended Hunter College in New York City and studied marketing and communication before joining direct selling in 2015.

Multi-level marketing seller Jessie Lee Ward has died of **colon cancer** after trying to cure it naturally.

Ward was the vice president of Pruvit, a company that sells ketone supplement products. Pruvit released [a statement about Ward's untimely death on Instagram](#), writing, "Her life was cut short but the years we've known her, she lived the quality of life equal to several lifetimes."

Ward had made a string of controversial statements about cancer treatments since her diagnosis earlier this year, per [The Daily Beast](#).

She shared that she had been diagnosed with stage four colon cancer in March following routine blood work. Her oncologist suggested aggressive chemotherapy to extend her life expectancy; Ward subsequently shared on social media that she doubted her care team's expertise.

After joining Prüvit, Ward rose rapidly through the company's ranks, becoming their top earner and recruiter, building a worldwide network marketing team of a cumulative 1.6 million customers and 21,000 promoters spanning 41 countries.

[Sep. 16, 2023](#) - Burlington, IA - 38 year old Marc Seibrecht fought a one year battle with Stage 4 Colon cancer and died on Sep. 16, 2023.

Marc's Family Care

Family Friends is organizing this fundraiser.

An incredible husband, father, son, brother, uncle, and friend [lost his battle with stage 4 colon cancer on September 16, 2023](#), at the age of 38. Marc leaves behind many who love him, but most specially his wife, Jen, and his two young children, Maverick (5) and Shelby (3).

As you may know, Marc fought a courageous battle for a little over a year which included chemo, radiation, and surgery. During that time, his ability to work was limited, and Jen stays home to support their children's needs. While thriving, Maverick has cerebral palsy which requires ongoing therapy treatments and occasional surgeries.

[Aug. 28, 2023](#) - Tupelo, MS - 39 year old 2x Iraq combat veteran Dustin Kindler was diagnosed with Stage 4 Colon Cancer and needed immediate surgery to remove 1/3 of his colon, due to the large tumor size.

Help Dustin through his fight of colon cancer

This is written on behalf of Dustin Kindler who received the devastating news of being diagnosed with Stage 4 Colon Cancer on August 08/28/2023.

After months of stomach issues, Dustin was hospitalized on 08/28/2023 and needed immediate surgery to remove a large tumor that had formed in his colon. The tumor, along with what has spread to lymph nodes has been diagnosed as stage 4 cancer and needs immediate treatment once he's recovered from surgery. So, on 09/18/2023 he had surgery to put in a port for his chemotherapy. Then he started chemotherapy on 09/19/2023. He will have to have chemotherapy for at least 6 months. He will go every two weeks to the oncologist where he will do 2 hours of in-clinic chemotherapy then he will do 46 hours of chemotherapy at home. Then after 46 hours of chemo at home, he goes back to the oncologist and then removes the chemo treatment he will have to do this every 2 weeks for at least 6 months. His road to recovery & remission will be a long one but doctors are hopeful of healing him.

This is a little back story of Dustin's life:

Dustin Kindler is 39 years old. He is a 2x combat veteran of Iraq. He has been married to his wife Melinda Kindler for 18 years. They have two children Kaylee and Karson Smith; they also have three grandchildren. On August 28, 2023, he had to have emergency surgery to remove 1/3 of his colon due to a large mass and blockage, his wife was told that the mass was cancer. They found out that it was Signet Ring Cell Carcinoma stage 4, a rare form of colon cancer.

Any donations and prayers are appreciated.

They have a cash app \$kindler1980.

[Aug. 20, 2023](#) - Vancouver, BC - 37 year old Aimee Cox had an 11 month old when she was diagnosed with Stage 4 Colon Cancer with liver metastases. She is also positive for mutation in the BRAF-V600E Protein. She is currently on immunotherapy and struggling with a Shingles breakout.

aimeecgcox • Follow
Vancouver, British Columbia

aimeecgcox This last week had me on such a high from the wedding of our dreams. Then on Monday I went to BCCancer with my friend @jillianchapmanhair and she got to witness this big reality check come down. I had woke up with a swollen eye and bumps on it. My treatment was almost delayed as they thought it could be shingles. SHINGLESSSS. Apparently since the vaccines more young ppl are getting shingles. Well that's just fantastic. I went to my NP the following day for testing. Then an ophthalmologist after too to make sure it wasn't in my eye and to help diagnose. They were convinced it was hsv or shingles. One day before leaving for a weekend family moon post our wedding the results came back as negative for everything we tested. Turns out it is just another side effect from my chemo/targeted therapy drugs. My body held up for us to have a party of a lifetime and then broke. It's not really painful it's just not easy to hide. On the daily my cancer can be hidden and I am still me outwardly. When it is visible for everyone to see my mind was much more affected.

#panitunumab thanks and hopefully you are working ☐☐

Help Aimee Cox Beat Stage 4 Colon Cancer

 **Team fundraiser**
Audrey Cox and 3 others are organizing this fundraiser on behalf of Aimee Cox.

On November 25, 2022, my charismatic, beautiful 37-year-old sister, Aimee Cox, received tragic news: she has stage 4 colon cancer that metastasized to the liver.

In true Aimee fashion, she held her head up high and proclaimed she would give everything in herself to beat this ugly disease. With loving support from her partner Elliot and endless cuddles from Reese, her 11-month-old baby girl, Aimee was and still is determined to beat her diagnosis.

Then, on November 30, 2022, we received a further setback. **Aimee's immunohistochemistry revealed she was positive for the mutated BRAF-V600E protein.**

“Between 8% and 12% of patients with metastatic colorectal cancer (mCRC) harbour a BRAF-V600E mutation in their tumours, which is associated with a poor response to standard chemotherapy and short overall survival.”

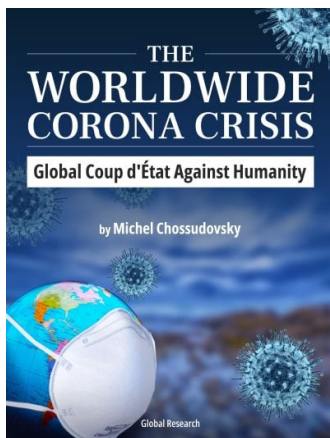

[Aug. 18, 2023](#) – Angel Rae Collins McDonough is 31 years old. She was diagnosed on February 28, 2023, with Stage 4 Colon Cancer. In August 2023 she had liver resection to remove liver metastases.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and

massive assault against liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. -Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden "plandemic"; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test - which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that "there is no causal relationship between the virus and economic variables." In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. -David Skripac

A reading of Chossudovsky's book provides a comprehensive lesson in how there is a global coup d'état under way called "The Great Reset" that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
