*The brief explosive video is posted at [autismmediachannel.com](#) on the home page: “CDC Whistleblower William Thompson on Thimerosal.”*

Beyond admitting to fraud in a 2004 Centers for Disease Control (CDC) study that exonerated the MMR vaccine, Dr. William Thompson, a CDC scientist, asserts there is a connection between mercury (thimerosal) in vaccines and autism.

Thompson states that giving a vaccine containing mercury to a pregnant woman is something he would never do.

Couched in science-speak, Thompson winds up his remarks with this: “There is biologic plausibility right now to say thimerosal causes autism-like features.”

Mercury causes autism.

For a scientist at the CDC to make this admission, after millions and millions of dollars have been spent by that agency and the US government to conclude mercury has no connection to autism...it’s extraordinary, to say the least.

The PR mantra declaring thimerosal safe has been repeated thousands of times by major media outlets—and now a researcher on the inside has repudiated it.

“Experts” will try to parse Thompson’s words, but the meaning is clear.

Meanwhile, the major media blackout on Thompson’s revelations continues. The collusion in a vast crime is their mission.
