

Vaccine Mandates Were Predicated on “Hope” Rather Than Science, Admits Deborah Birx

The audacity of vaccine mandates

Former White House Coronavirus Response Coordinator Dr. Deborah Birx revealed that the federal government was relying on “hope” that COVID-19 vaccines would prevent infection when officials publicly stated that Americans who received the jab would become immune to the virus.

The admission came during a line of questioning by Rep. Jim Jordan, who inquired to the former Trump administration official: “When the government told us that the vaccinated couldn’t transmit it, was that a lie or is it a guess?”

“I think it was hope that the vaccine would work in that way,” she replied.

Dr. Birx’s comments follow a host of studies determining that the COVID-19 vaccine doesn’t confer [protection](#) as comprehensively as natural immunity. Data during the Omicron surge also showed that vaccinated people in Germany [comprised](#) the overwhelming majority of individuals contracting the variant.

“You were part of this effort when you were in the previous administration. And you’re saying in this administration that you can’t rule out the fact that our government was lying to us when they told us the vaccinated could not get the virus,” Rep. Jordan continued.

“I don’t know about their discussions that they had in the task force. So I can’t tell you that,” she began, adding “I can tell you as a family member who had individuals that were susceptible, of course, we got everybody vaccinated. But we still used layered protection during surges.”

Despite being vaccinated, Dr. Birx took additional precautions “because I knew potentially vaccine immunity would wane like natural immunity waned.”

“There was evidence that every four months, reinfection was occurring in South Africa.”

Revelations about the questionable efficacy of the vaccine come amidst the White House, Democratic governors, and left-wing companies attempting to mandate the jab for employees and customers. Users sharing data highlighting the weakness of the vaccine on social media platforms such as Facebook have also been hastily [censored](#) by left-wing “fact-checking” [organizations](#).
