*Nobel Prize Laureate Kary B. Mullis was the inventor of the **polymerase chain reaction technique (PCR-RT)***

***Dr. Kary B. Mullis**, who passed away on August 7, 2019 at age 74, stated emphatically that no infection or illness can be accurately diagnosed with the PCR-RT.*

“PCR is a Process. It does not tell you that you are sick”.

“The measurement is not accurate”.

Mullis described the PCR-RT as a “technique” rather than “a test”.

It is a useful technique which allows for “rapid amplification of a small stretch of DNA”.

*Had Dr. Kary B. Mullis been alive today he would have been an outspoken critic of **the Misuse** of the PCR-RT by the WHO and national health authorities. The PCR-RT has been used as a so-called “test” to “**detect**” the spread of the virus as well as “**measure**” the incidence of SARS-CoV-2.*

The PCR-RT designed by Dr. Mullis is a technique. It is not a test

This misuse of the PCR-RT technique has now been formally acknowledged in a January 2021 statement of the WHO. Despite its shortcomings, the use of the PCR test remains widespread.

The data pertaining to so-called Covid-19 positive cases is misleading and invalid.
