*5G is now installed and switched on across millions of sites all over the world and so my testing has begun. Many are wondering: what does 5G sound like?*

Today I’ll share with you the radiation levels plus the eerie sound of 5G radiation coming off the transmitters.

The radiation from 5G (RF/microwaves) is an invisible environmental pollutant, beyond our awareness.

My goal – using specialized equipment, is to reveal both what **5G beam forming radiation sounds like** and **how much radiation I’m being exposed** to 600 meters away from the 5G transmitters.

## Location of tested 5G installation

The 5G site tested was in Kings Cross, Sydney and goes by RFNSA ID number 2011007. I set up **615 meters away** from the 5G transmitters with an unobstructed view of the entire installation.

The testing equipment used was some of the best available in the world. The Gigahertz Solutions **HFWS9D** + **HP33 filter** and directional antenna to measure **only the 5G radiation** at a frequency of 3.5 GHz.

## High radiation levels 600m (2,000ft) away

A maximum power density of **12,600 uW/m<sup>2</sup>** (crest factor applied) was detected from **615 meters away** (2,018 ft) - that's 12 times the IBN extreme level. This is also from the 5G transmitters alone, not including 3/4G which is also present at the site.

This is a concern, especially since almost no one is using 5G phones (when I conducted this test in December 2019). Meaning that the radiation from 5G transmitters is likely to power up even more as people start using 5G enabled devices.

Radiation level as compared to IBN guidelines from Germany

## 5G is dramatically increasing exposures

Since the early 1900s, our exposure to non-native EMFs has been creeping up slowly. However, it's only been in the last 25 years or so that our exposures have **exploded beyond belief**.

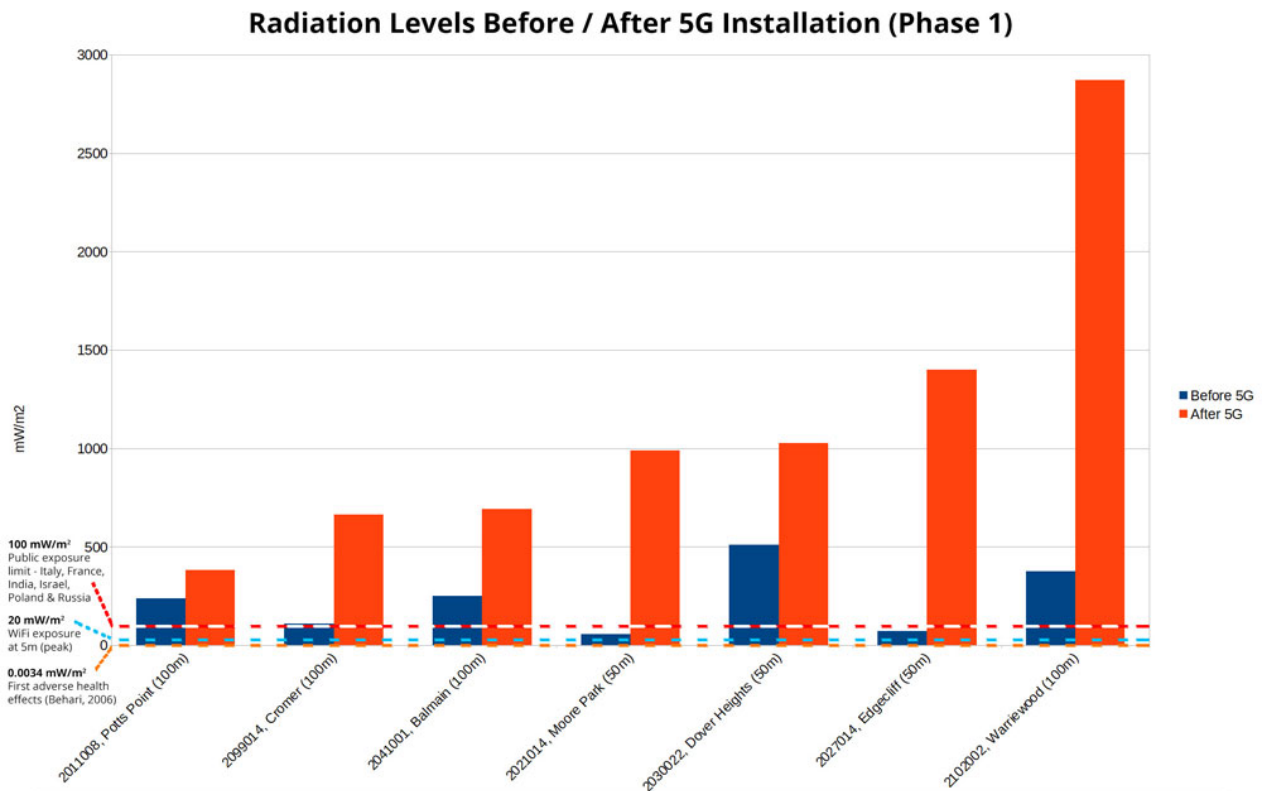

This is thanks mainly due to the increased cell tower density (demand for high bandwidth data on mobile devices) and the wireless technology we're bringing into our homes (Wi-Fi, cell phones etc).

However, in early 2019 as 5G was being installed around the globe, most people were very unaware of something of great significance. A major escalation of our exposure to radio

frequency / microwave radiation – specifically from 5G.

A small study I conducted proved that once 5G was installed at cellular base station sites – there was **almost always a significant increase in radiation**.

From the graph below, you can very easily see the radiation levels before and after 5G was installed.

#### Adverse Health Effects Begin at Low Levels

- 0.0034 mW/m²** - Significantly reduced sperm count (*Behari, 2006*)
- 0.1 mW/m²** - Increased stress hormones, dopamine decreased; adrenaline increased; chronic physiological stress in cells (*Buchner, 2012*)
- 1 mW/m²** - Adverse neurological, cardio symptoms and cancer risk (*Khurana, 2010*)
- 1.6 - 10.5 mW/m²** - Irreversible infertility in mice after 5 generations of exposure to RFR from an 'antenna park' (*Magras & Xenos, 1997*)
- 2 - 80 mW/m²** - Two-fold increase in leukemia in children (*Hocking, 1996*)
- 10 mW/m²** - RFR induced pathological leakage of the blood-brain barrier (*Persson, 1997*)
- 13 - 57 mW/m²** - Doubling of leukemia in adults (*Dolk, 1997*)
- 20 mW/m²** - Induced double-strand DNA damage in rat brain cells (*Kesari, 2008*)
- 100 - 1,000 mW/m²** - Increased risk in radar operators of cancer; very short latency period (*Richter, 2000*)
- 925 mW/m²** - Caused genetic changes in human white blood cells (*Belyaev, 2005*)

For more on health effects see: • Physicians for safe technology • Bioinitiative report • 5G awareness summit • RF color charts • EMF Portal

Cell transmitter locations were selected randomly. Major increases are seen across most sites. Data is from official EME reports as found on the Radio Frequency National Site Archive (RFNSA).

Those affected most will not only be those **living in direct line of sight to a cell tower**. It's going to impact all of us when just **simply driving around**.

When driving (or walking around for that matter) you're getting significant exposures as you pass the 4 / 5G transmitters. Which are now basically everywhere.

Often, 5G (and 4G) transmitters are placed hanging off highway signage, rooftops, cell tower structures – even inside tunnels and right above their entrance / exits.

### What does 5G sound like?

During my investigation I also managed to capture the sound of 5G which is something else! It has no resemblance to the smooth high pitch sound of 3 / 4G transmitters. It's highly

erratic and almost sounds like static electricity.

One can only imagine what kind of biological harm this kind of field has. Just listening to its erratic sound speaks for itself – listen below!

Sound of 5G coming off the transmitters

I've been getting a lot of people experiencing symptoms, not only from 5G but from all 4 EMFs of concern in general. Very common is headaches, ringing in the ears or feeling a vibration in the head.

This has me concerned... It would be interesting to hear what others are feeling around 5G towers, especially those suffering from electro-hypersensitivity (EHS).

**Remember to keep your distance and limit exposure!**
