

What Global Warming?

Such as it was is over

In-depth Report: [Climate Change](#)

Fact: All history reveals that time after time this planet of ours has experienced periods of warming and periods of cooling. A century of slight global warming, about half a degree, ended in 1998.

Fact: In this century a global cooling has set in. In 2008 most of the northern hemisphere, except for Western Europe, is coming out of what most scientists say has been the harshest winter in decades.

Malta, Israel, China and India's New Delhi have been subjected to record low temperatures. In Afghanistan, more than 900 people and 316,000 head of cattle died as a result of bitter cold weather according to Reuters.

In a letter to U.N. Secretary General Ban Ki Moon 13 top scientists including one Nobel Prize winner, pointed to the fact that while CO2 levels have continued to rise, global temperatures have fallen, dramatically contradicting the claim that CO2 levels cause global warming. They wrote that the UN Climate change Panel "must be called to account and cease its deceptive practices - Policies based on False science must be ended."

Meteorologist Anthony Watts says that the total amount of cooling ranges from 0.65C up to 0.75C — a value large enough, he says, to erase nearly all the global warming recorded over the past 100 years.

In a news conference held in Orlando, Florida John L. Casey, Director of the Space and Science Research Center, issued a landmark declaration on climate change.

"In an opinion echoed by many scientists around the world, the Space and Science Research Center (SSRC), today declares that the world's climate warming of the past decades has now come to an end. A new climate era has already started that is bringing predominantly colder global temperatures for many years into the future. In some years this new climate will create dangerously cold weather with significant ill-effects world wide. Global warming is over - a new cold climate has begun."

Fact: Lack of Sunspot activity portends the onset of global cooling. The sunspot number should stand close to 100; instead it's zero

The level of activity on the Sun will significantly diminish sometime in the next decade and remain low for about 20 - 30 years," said Ian Wilson, lead author of a study appearing in the June issue of PASA, Publications of the Astronomical Society of Australia.

The result is a strong, rapid pulse of global cooling, said Wilson. "On each occasion that the Sun has done this in the past the World's mean temperature has dropped by 1 - 2 C."

"A 2 C drop would be twice as large as all the warming the earth has experienced since the start of the industrial era, and would be significant enough to impact global agriculture output."

Got it? Global warming, such as it was, is over. Done with. Kaput.

That however, had failed to dampen the enthusiasm of the global warming fear mongers. It has, instead, fueled a spate of often ludicrous claims of an impending planetary disaster due to alleged global warming. As meteorologist and Weather Channel founder John Coleman has said all the proponents of global warming can do is to lamely suggest that global warming has gone on vacation and is taking a ten-year hiatus on account of the absence of sun spots. "If this weren't so serious it would be laughable" Coleman said.

"It is the greatest scam in history, he said. "I am amazed, appalled and highly offended by it. Global warming; it is a scam. Some dastardly scientists with environmental and political motives manipulated long term scientific data to create in allusion (sic) of rapid global warming. Other scientists of the same environment whacko type jumped into the circle to support and broaden the "research" to further enhance the totally slanted, bogus global warming claims. Their friends in government steered huge research grants their way to keep the movement going. Soon, they claimed to be a consensus."

Yet the beat goes on, and gets more ludicrous with one member of Congress actually telling a bunch of kids that global warming caused Hurricane Katrina and led to the deaths of Americans in the Blackhawk Down espoused in Somalia. He forgot to mention it also causes tooth decay, body odor and underarm perspiration.

Global warming is clearly over, yet Al Gore and his acolytes keep warning us that the planet is heating up even as it continues to get colder.

One definition of insanity is the compulsion to make the same mistake over and over again all the while expecting a different and successful outcome.

If that suggests that Al Gore and his fellow global warming fantasists are nuts, well , ...

Phil Brennan is a veteran journalist who writes for NewsMax.com. He is editor & publisher of Wednesday on the Web and was Washington columnist for National Review magazine in the 1960s. He also served as a staff aide for the House Republican Policy Committee and helped handle the Washington public relations operation for the Alaska Statehood Committee which won statehood for Alaska. He is also a trustee of the Lincoln Heritage Institute and a member of the Association of Former Intelligence Officers. Phil Brennan is a regular columnist for Ether Zone.
