

Why are so Many Healthy People Dying from the Flu After Receiving the Flu Vaccine Shot?

Another flu death of an otherwise healthy person after receiving the flu vaccine has been reported in Wisconsin. [WISN](#) in Wisconsin is reporting that 26-year-old Katherine McQuestion has died from flu complications, after she received the flu shot. Katherine was reportedly a newlywed, and was required to receive the flu shot as part of her employment. She was a radiology technician and worked at St. Catherine's Medical Center in Pleasant Prairie, Wisconsin according to WISN.

McQuestion's mother said her daughter was healthy, beautiful and smart. She married in September, and her funeral was held on Tuesday. ([Source](#).)

A health official interviewed by WISN stated that this is "rare", and that everyone should get their flu shot. She apparently failed to mention that the CDC has stated that this year's flu shot is mostly ineffective against the current influenza strains.

Are Flu Deaths After Vaccination Really "Rare"?

So how rare are these flu deaths following flu vaccinations? Can we really trust the health officials who are saying they are "rare" and encouraging everyone to receive the flu shot even when it is known it is not very effective?

In covering these flu deaths following flu vaccinations in the mainstream media, I have yet to see any truly investigative reporting showing any science or facts to back up health officials' claims that these deaths are "very rare." So let's take a look at a few facts that can actually be verified.

Flu Vaccine Injuries and Deaths are by Far the Most Compensated in Vaccine Court

Vaccine Injuries and Death Payments

Report from the
Department of Justice

December 4, 2014

Vincent J. Matanoski
Deputy Director, Torts Branch

A review of the quarterly reports issued by the Department of Justice showing cases in which the government has paid out damages for vaccine injuries and deaths clearly shows that the majority of cases are awarded to flu vaccine victims. This information is never published in the mainstream media, but Health Impact News publishes it. You can read the most recent report from December 2014 in which the government paid out damages to 80 people who were injured or killed by the flu vaccine: [Government Pays Compensation to 80 Flu Vaccine Injuries and Deaths](#).

Guillain-Barré Syndrome (GBS) is the most common side effect and injury due to the flu vaccination. It is listed as a side effect with a warning in the flu vaccine package insert. The CDC and other sources claim that the incidence of GBS from the flu shot is about 1 or 2 per 1 million shots. Death rates from the flu are not given, but one must assume it is far lower than GBS.

And yet, we have seen a rash of media reports this flu season reporting that otherwise healthy individuals who received the flu shot died from flu complications. For some of the other stories, see:

[**Could the Ineffective Flu Shot be Causing More Severe Flu Outbreaks, Including Deaths?**](#)

Is the Science Behind Flu Vaccines Exempt from Scrutiny?

Is not one death from the flu in a healthy individual after receiving the flu vaccination worthy of an investigation into the safety of flu vaccines, and the supposed science behind them? When multiple deaths occur, when health officials call it "rare" after healthy individuals die from the flu after receiving the flu shot, does that not qualify as an "epidemic?" More people have now died from the flu after the flu shot in the United States than from Ebola.

One doctor who has sounded the alarm on the supposed science behind the annual flu

vaccine is Dr. Mark Geier:

In this video, Dr. Mark Geier explains the fraud behind the flu vaccine. Dr. Geier is NOT anti-vaccine. He is an MD and has a PhD in genetics. He spent 10 years working at the National Institute of Health, and was a professor at Johns Hopkins University as a geneticist. He is also the author of over 150 peer-reviewed publications.

He worked on vaccine safety and efficacy for more than 30 years. He was one of four scientists who worked to replace the DTP vaccine, a vaccine that caused every child to become sick with a high fever at the time of vaccination, with the DTaP vaccine, which is an attenuated vaccine and causes illness due to fever in only 3% of those vaccinated.

In the video above, he explains that the flu shot causes [Guillain-Barré Syndrome](#), and that the flu shot is not very effective in preventing the flu. He also explains that the CDC does not follow the law for vaccines in requiring long-term safety testing for the influenza vaccine like they do with other vaccines, as it is impossible to test a vaccine that changes every year. So the flu vaccine is basically an experimental vaccine that they want to give out to 300 million people every year. There are also no studies showing the safety of giving the flu vaccine to the same person every single year. However, Dr. Geier points out that the CDC is in the business of distributing flu vaccines, because they represent 300 million doses per year, whereas all the childhood vaccines together only number 20 million.

Dr. Geier goes on to explain that flu is “the wrong thing to vaccinate against” because you have to keep re-vaccinating against it every year, unlike childhood infectious diseases, such as smallpox, that are only vaccinated for once. Dr. Geier points out how ridiculous it is spend billions of dollars on a vaccine that might, at its best, save about 50 lives a year, when there are far more serious problems causing death that are more worthy of that kind of expenditure.

Be informed, don't become a statistic of those damaged or killed by the flu vaccine! There are many other less dangerous ways to protect oneself from influenza.
