

Preparing for a False Flag? Why Are NATO ISR and Heavy Weapons in South Ukraine Nuclear Power Plant?

*Amid numerous disturbing [reports about possible false flag operations involving nuclear devices and weapons](#), the Kiev regime seems to be escalating its actions in this regard. According to various local sources, the **South Ukraine Nuclear Power Plant (NPP)**, located in the city of Yuzhnoukrainsk in the Nikolayev region (oblast), has been effectively taken over by the Neo-Nazi junta forces. Although troops have been stationed in and around the NPP since the start of the special military operation (SMO), in recent weeks this has escalated. Apparently, mysterious "guards" have appeared at the NPP and have even restricted access to the reactor facilities, including to the staff responsible for the critically important maintenance of the reactor and the NPP's key systems and subsystems.*

Worse yet, the "guards" are offering no explanation for their behavior, nor does anyone else, be it the military or civilian authorities. In essence, nobody really knows for sure, but many people are skeptical (to say the least). The "guards" have even placed what can only be described as ammunition crates inside the NPP. And it doesn't seem to be small arms ammunition, but something much bigger, such as shells or even rockets, all of which have foreign markings. For over a year, there have been numerous [reports about the Kiev regime hiding NATO-sourced weapons there](#), obviously in an attempt to prevent their destruction. Needless to say, having any sort of weapons at a nuclear facility of any kind is suicidal in and of itself, but having shells and rockets stored there is simply criminal.

This is particularly dangerous as the political West and the Neo-Nazi junta have been insisting that Russia is supposedly planning to use a tactical nuclear weapon in Ukraine, supposedly due to [mythical "battlefield losses"](#). On the other hand, Moscow has repeatedly issued warnings about [the Kiev regime's plans to build a so-called "dirty bomb"](#), for which it has more than enough enriched uranium stored in several Soviet-era NPPs across Ukraine. The previous scenario is extremely unlikely, as it's not in Russia's interest to use nuclear

weapons. However, Moscow's "dirty bomb" warnings are certainly not to be dismissed, [as the Neo-Nazi junta has been threatening to acquire nuclear weapons for years](#). This includes threats by the Kiev regime frontman **Volodymyr Zelensky** himself.

Latest intelligence data suggests that the South Ukraine NPP is also being used as an ISR (intelligence, surveillance, reconnaissance) command and control center for most [NATO forces covertly stationed in Ukraine](#). This is hardly unexpected and is in line with the previous message Russia sent to the belligerent alliance after it hit [an underground bunker where hundreds of NATO officers were deployed](#) to command and coordinate their favorite puppet regime's troops. According to varying estimates, up to 400 officers and other staff were neutralized in a hypersonic missile strike (presumably involving a single 9-A-7660 "Kinzhal"). Obviously, in order to ensure such high casualties among high-value assets are avoided, NATO most likely decided to deploy its higher-ranking personnel in NPPs, knowing that Russia will not target those.

This could also explain why the United States and NATO are suddenly parroting about invoking Article 5 in case of a supposed Russian use of tactical nuclear weapons or if an attack on an NPP causes radiation spikes. Both scenarios clearly imply that a false flag is in the works, as this is precisely how [the political West operates during its countless aggressions against the world](#). The belligerent power pole first threatens to attack in case the side they are targeting does something, and then, all of a sudden, the targeted country supposedly does "exactly that", even though it's clearly not in its interest. Obviously, such a scenario is virtually impossible to implement against a country like Russia [without leading to a world-ending thermonuclear confrontation](#).

It has now become clear that the political West is aware of just how much of [a failure the Neo-Nazi junta's much-touted counteroffensive has been](#), leading to attempts to thwart any possible Russian counterattack that might have devastating consequences for the Kiev regime. This might be attempted through direct intervention by NATO, as the political West probably believes that such escalation could be controlled. And a possible false flag operation simulating a Russian attack on the South Ukraine NPP ([or even the Zaporozhye NPP](#)) might be used as an excuse for that. Still, considering how risky such a scenario is, the belligerent power pole might even contemplate [the delivery of nuclear weapons to the Neo-Nazi junta](#) in an attempt to cause [a localized nuclear confrontation with Russia](#).

Russian Foreign Minister Sergei Lavrov has already hinted at this possibility, [warning that the delivery of nuclear-capable F-16 fighter jets](#) might be the way for the political West to achieve such a scenario. However, for its part, [Moscow has warned that this would certainly not be a localized confrontation](#), as the Kiev regime's puppet masters would also suffer the consequences of their [rabidly Russophobic actions in Ukraine](#). The already thin line between global peace and thermonuclear annihilation is getting thinner by the day due to [the US-led belligerent power pole's unrelenting aggression against Russia](#). The political West has a clear choice of considering an off-ramp solution that might avert a catastrophe of global proportions. Still, [it's pushing for further escalation](#).
