***Dr Paul Marik**, one of the world’s most published intensive care specialists, has filed a lawsuit against Sentara Norfolk Hospital to overturn its prohibition on him using FDA approved repurposed medicines in the ICU he oversees. The hospital recently issued a directive banning Dr. Marik from using the medicines in the MATH+ protocol which have reduced covid mortality rates in the ICU by over 50%. The result of the ban has been a sharp increase in mortality amongst patients suffering from Covid-19.*

Epidemiologist **Dr. Juan Chamie** has commented on his Telegram channel:

“In my opinion, banning Dr. Marik from using effective treatments is all about money. You could bet that the low average ICU days of Dr. Marik’s COVID patients is affecting the hospital revenue”.

The MATH+ protocol is made up of several repurposed medicines that are FDA approved, ultra safe and very cheap. The core elements of the protocol are ivermectin, heparin, methylprednisolone, thiamine and high-dose intravenous vitamin C.

The ban on Dr Marik and other doctors using safe and effective repurposed medicines has to be put in context of developments over the last year. Over the twelve months public health bodies in the United States and across the world, which have shown themselves to be completely beholden to the interests of big Pharma, have waged war against cheap, ultrasafe, repurposed medicines for the treatment of Covid-19.

The result of the ban on the medicines in the MATH+ protocol has been a sharp increase in mortality amongst patients suffering from Covid-19. This as prompted Dr Marik to file a lawsuit against Sentara Norfolk hospital to overturn this ban. The lawsuit notes that the hospital is “preventing terminally ill COVID patients from exercising their right to choose and to receive safe, potentially life-saving treatment determined to be appropriate for them by their attending physician.”

Dr Marik's [lawsuit](#) cites numerous legal cases that under Virginia law establish the right of patients to receive treatment deemed appropriate by the doctor attending them and which they have given voluntary consent to.

The lawsuit states that the hospitals ban on the safe and effective medicines that Dr Marik has been using is motivated by several competing priorities which include profitability and the desire to conform to "safe harbour" standards of care espoused by Government agencies that are not sensitive to the needs of the individual patient.

The opposition papers filed by Sentara Norfolk hospital do not even mention the issue of patient welfare. They claim that Dr Marik lacks standing to challenge a hospital prohibition that denies patients, under his care, the opportunity to receive life-saving medicines which have a long track record of proving to be ultrasafe and efficacious for the treatment of Covid-19.

Professor Joseph Varon, has declared that the MATH+ protocol has led to a 50% reduction in deaths of Covid patients in the two hospitals where is Chief of Staff.

[Dr Pierre Kory](#) who is president of the Frontline Covid-19 Critical Care Alliance of which Dr Marik is a co-founder, has declared that:

"The Sentara Healthcare System's prohibition of the MATH+ protocol is a threat to every doctor and every patient in the U.S. We know the protocol is effective. Patients who could have been saved by MATH+ are dying because of the hospital's baseless restriction. We will continue to see more deaths that could have been prevented until the court takes action and orders the hospital to reverse course."

Last Thursday Dr Marik [testified in court](#) where he is applying for an injunction to overturn the hospitals ban on medicines which he has been using for over a year to save the lives of Covid-19 patients. During his testimony Dr. Marik called the hospital's ban on the MATH+ protocol as "unprecedented" and said "This is not normal. It's cruel and unusual punishment."

The judge presiding over the case said will issue his decision in due course.

Meanwhile, ordinary people who believe hospitalized patients have every right to determine their course of treatment with their attending doctor and that patients should have access to the full array of safe and proven treatments for COVID-19, including those that are part of the MATH+ protocol can take [various actions to support Dr. Marik](#).

The ban on Dr. Marik's use of cheap, ultra safe repurposed drugs is part of the wider attempt by public health authorities in the US to promote the agenda of big pharma. Nothing is to be allowed to get in the way of the mass vaccination campaigns or the licensing of new expensive anti virals developed by Merck and Pfizer which are not as effective as repurposed medicines such as ivermectin. My advice to anyone wanting to understand the war on doctors using repurposed drugs to save lives is simple: follow the money.

The big pharma approach to medicine versus repurposed drugs such as ivermectin

Over the course of the pandemic governments and public health agencies have shown no interest in taking action to promote the immune health of ordinary people. Such actions could include promoting a healthy diet, exercise, plenty of sleep and rest as well as vitally important supplements such as vitamins D and C.

Another possible course of action for governments could be the mass distribution of cheap, ultra safe repurposed drugs such as ivermectin. In the Indian state of Uttar Pradesh, population 241 million, the mass distribution of Ivermectin has virtually eliminated covid cases.

USA vs. India's largest state

	USA	UTTAR PRADESH
Population	330M	240M
Early treatment protocol	no	yes
Widespread Ivermectin	no	yes
Seven-day average confirmed cases*	132K	27
Daily deaths*	1385	6

Source Johns Hopkins University, 9-6-2021

[Source](#)

Instead we have complete reliance on draconian lock downs, punitive actions against the unvaccinated, mass vaccination campaigns and reliance upon expensive toxic drugs that don't actually work such as Remdesivir.

REMEDESIVIR . . . Ivermectin

	REMEDESIVIR	Ivermectin
Cost	\$3K	pennies
Simple to provide home patients	no	yes
Causes organ damage	risks	no
Studies to gain approval	1, approved	60+, declined
Major conflict of interest on NIH approval committee	yes	no
FDA & Dr. Fauci support	yes	no

[Source](#)

Meanwhile, governments across the world are warning of lock downs this winter to contain the spread of a disease that is eminently treatable and preventable.

In some countries, such as Austria, they are pursuing the tyrannical measure of locking down the unvaccinated. This is completely unscientific as it now a well known that the vaccinated can both catch the virus and transmit it just as much as the unvaccinated. Of course, governments across the world are using the pandemic as an excuse to pit ordinary people against each other at a time of a global economic crisis and increase their powers over the entire population.

It would appear that governments and public health bodies are at best negligent, at worst they are consciously failing to do all they could to promote public health. Could it be their actions are working in the interest of corporations that are making tens of billions of profit from vaccines and other novel medications? God forbid we use repurposed drugs such as Ivermectin that costs cents to make and is incredibly efficacious (64 medical trials and counting) both as a prophylactic and treatment for Covid-19.

Dr. Marik is making a stand for putting patients first

Dr. Marik is standing up to the big pharma approach to medicine which is killing people in his hospital. If his lawsuit is victorious it will encourage doctors everywhere to put patients first and follow the science instead of the profits of rapacious drug companies whose only objective is to maximise profit at the expense of human life.

Elimination of COVID-19 is a race against viral evolution. No treatment, vaccine, or intervention is 100% available and effective for all current and future variants. All practical, effective, and safe means should be used. Those denying the efficacy of treatments share responsibility for the increased risk of COVID-19 becoming endemic; and the increased mortality, morbidity, and collateral damage.
